

# Traffic Management

- One detour will be constructed to safely move traffic around the construction of the highway overpass at the east end of the project.
- As a minimum, single lane alternating traffic will be maintained, and speeds will be reduced to 50km/hr through the construction zone.
- Closures for blasting may be between 20 and 30 minutes at a time.
- Temporary highway closures are being considered. The project team is looking for public input around these potential closures.
  - Appropriate communication as to when these closures would take place so that these closures are predictable will be the priority.
- During construction, the contractor will be made aware of the BC Ferries and Alaska State Ferry schedules for travelling motorists.
- Travellers should also check DriveBC in advance of departing from Terrace or Prince Rupert for the most up to date information, and to ensure appropriate travel time is planned.
