

Webinar Presented by:

Carlos Salas
Vice President, Energy
Geoscience BC

Catherine Hickson
President
Tuya Terra Geo Corp

Yuliana Proenza
Project Geologist
APEX Geoscience

d'Artagnan Newton
Consultant to
Xa'xtsa-Douglas First Nations

Korie Marshall
President
Valemount Geothermal Society

Learn About:

Direct-use geothermal heat resources have the potential to drive rural economic development opportunities and offset greenhouse gas emissions, but are currently underutilized in BC. In this webinar, you will be introduced to a project funded by Geoscience BC and the Province of British Columbia that identified and evaluated Direct-use geothermal resources in B.C. You'll learn what geothermal energy is and how B.C. communities can evaluate this cost-competitive and sustainable heat source. Geothermal heat can be used for natural hot spring areas, space conditioning, greenhouses, fish farming, breweries and more. You'll also hear from communities of The Xa'xtsa-Douglas First Nation and Valemount, who will share how their communities are currently evaluating and moving forward with geothermal energy opportunities.
