

2013 Botany Conservation Status Rank Review and Changes

Liverworts:

- 116 liverworts were added to the BC flora in 2013 (following the taxonomy of Stotler and Crandall-Stotler (1977)).
- There was one scientific name change.
- Provincial Conservation Status Ranks have not yet been assigned for these plants, but they will be added as information on the distribution, abundance and risk status of these taxa becomes available.

Lichens:

- There was one lichen name change in 2013.

Mosses:

- One exotic species was added to the BC list.

Vascular Plants:

- Thirty-three vascular plants were added to the BC flora list, including 15 exotic species. Some additions were the result of new collections, while others were the result of re-identification of herbarium specimens.
- There were 26 scientific name changes and three English name changes.
- Provincial Conservation Status Ranks were reviewed and adjusted for 24 taxa. The 33 additions were also assessed and assigned ranks. In addition, 15 taxa were assessed with no resulting change to the ranks.
