

# Product Identification Numbers (PINs) for Publicly Funded Vaccine Administration

UPDATED: September 25, 2017

## Administration Fees for Publicly Funded Vaccines

- PharmaCare pays a fee for publicly funded vaccines only when a pharmacist administers the vaccine **by injection** to B.C. residents who meet the eligibility criteria to receive publicly funded vaccines as outlined in the [B.C. Immunization Manual](#).
- Vaccines must be administered by an authorized pharmacist. Vaccinations provided by other health care professionals, such as nurses hired for pharmacy clinics, cannot be claimed.

## Claims Procedures

### For administering publicly funded vaccines to eligible patients:

- Use the appropriate PIN (whether or not the product is eligible for an injection fee).
- Do not enter a drug cost or fee.
- Do not use an intervention code.

### For administering a vaccine to patients who are not eligible for publicly funded vaccine:

- Dispense the vaccine ordered from your private supplier.
- Use the product's DIN.
- Charge the patient directly.

Important: For all vaccines administered, record the lot number for the vaccine provided to each patient in your pharmacy records. Recording vaccine lot numbers is required in case of rare events such as a vaccine recall or an Adverse Event Following Immunization (AEFI).

**Please see list of PINs on page 2**

# Product Identification Numbers (PINs) for Publicly Funded Vaccine Administration

◆ Inclusion of a product in the lists below does not guarantee that the product is available ◆

◆ Recent additions to the list are indicated in red ◆

## Seasonal Influenza (2017-2018)

Pharmacists may offer publicly funded influenza vaccine to eligible B.C. residents as soon as it becomes available in their community. For information on when supplies will be made available, consult your local health unit or Health Authority. PINs for seasonal influenza vaccination claims submissions are effective until June 1, 2018.
