

## Test Review Committee Active Cases

Test Name
Chromosomal microarray test
BNP test
Blood film review
<i>C. difficile</i> toxin, real-time PCR
Hepatitis B virus (HBV) identification by nucleic acid amplification, direct quantification
BK polyoma virus (BK) identification by nucleic acid amplification, direct quantification
Cytomegalovirus viral (CMV) identification by nucleic acid amplification, direct quantification
Fecal immunochemical test (FIT) for analysis only
Fecal immunochemical test (FIT) for collection only
Molecular identification, stool isolate
Trichomonas antigen test
Bile acids, total
<i>Helicobacter pylori</i> stool antigen (HPSA)
Sex hormone binding globulin (SHBG)
Anti-tissue transglutaminase antibodies (anti-TTG), IgA
Neurological autoimmune disease tests
Neurology immune markers - sequencing for seizure disorders
Drugs of abuse testing
Non-invasive prenatal test (NIPT) for chromosomal aneuploidy
Newborn screening for severe combined immunodeficiency (SCID), biotinidase deficiency (BTN) and carnitine update defect (CUD)
Gastrointestinal pathogen multiplex panel (GPMP) and selective culture (SC)
