

Create Geomark from Clipboard Tutorial

General business example – Use the ‘**Create Geomark from Clipboard**’ form to create a geomark from KML you have copied to the clipboard. Using the clipboard is necessary only if you have Google Earth v4.3 or earlier installed on your machine as ‘Create in Google Earth’ does not work with these early versions.

Step 1 (if you have already identified an area of interest and have it copied to the clipboard, skip to Step 9)

Step 1: In your Google Earth session (any version), zoom into an area and type the name of a city or a geographic name (such as a river or lake), a coordinate (eg: 49 34.3N, 117 32.1W or 43.23N, 117.34W) or a mapsheet (eg: T0L1A0) in the left navigation window:

Step 2

Step 2: Click on the **Search** button.

Step 3

Step 3: If you move your mouse in the screen, you'll notice the cursor is now a "hand". By simply holding the left button of your mouse down and dragging it across the screen, you can navigate to another location.

You can also use the navigation tools on the right-hand side of your screen to zoom in or zoom out of the area. Click on the "+" to zoom in or the "-" to zoom out.

Step 4

Step 4: Add Polygon, Path (Line) or Placemark (Point)

4a. You can use the **Polygon** tool to define your area of interest. A polygon is similar to a shape and is used to define areas on a map. The Polygon tool is located on the main toolbar.

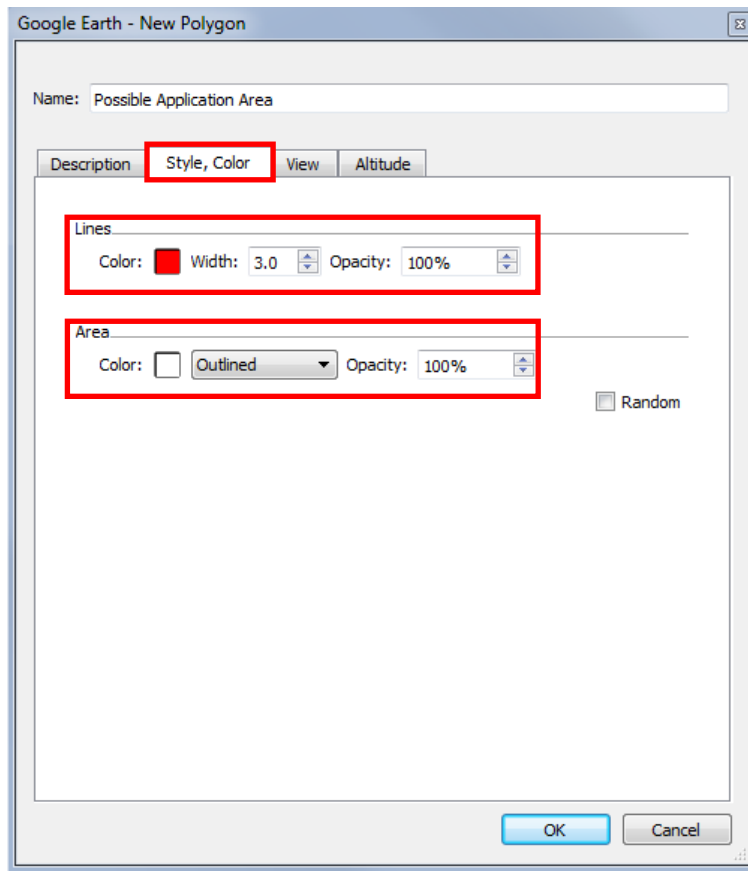

When the '**Add Polygon**' tool is selected, a new screen pops up. Use this screen to name your application area and to note important information about the area. This information may help others (such as FrontCounter BC) process your inquiry.

The screenshot shows the 'Google Earth - New Polygon' dialog box. It has a title bar with the text 'Google Earth - New Polygon'. Inside the dialog, there is a text field labeled 'Name:' with the text 'Possible Application Area' entered. Below this is a tabbed interface with four tabs: 'Description' (selected and highlighted with a red box), 'Style, Color', 'View', and 'Altitude'. Under the 'Description' tab, there are two buttons: 'Add link...' and 'Add image...'. Below these buttons is a large text area containing the text 'I might be interested in applying for this area for a gravel pit.' At the bottom of the dialog are 'OK' and 'Cancel' buttons.

****Tip - Do not close this box or press OK until your area is defined.***

****Tip - It is recommended to 'Name' your area so it is meaningful and can be recognized (eg: John Doe Private Moorage area of interest). Unique descriptions can be used to define multiple polygons (eg: Cutblock 1, Cutblock 2).***

****Tip – To help capture and visualize the area you are drawing, you can change from 'filled' to 'outline' mode as well as change the line color and width.***

You may have noticed your mouse cursor now looks like a square.

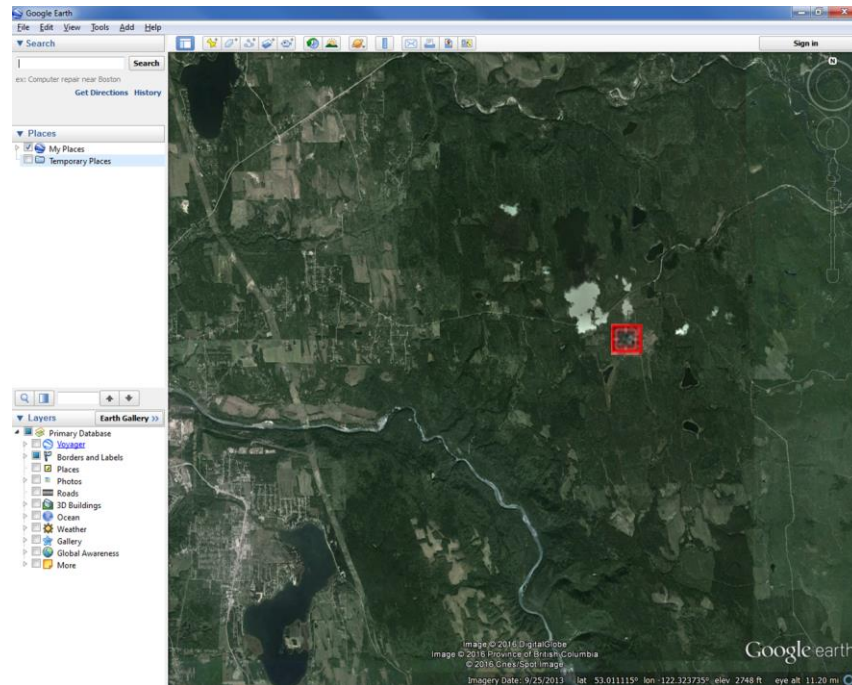

This means you are ready to start picking the points that will define the area you are interested in.

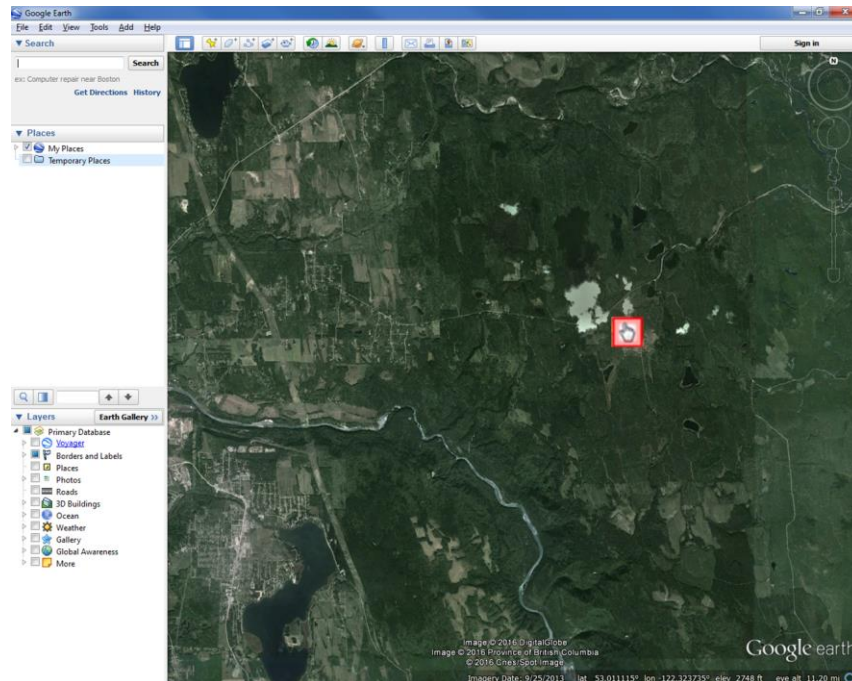

When defining your area, use the left button on your mouse to pick the points, pick points in a clockwise direction and avoid creating loops or overlaps. See the [FAQs](#) for points to watch for when drawing your area of interest.

Add Polygon Instructions

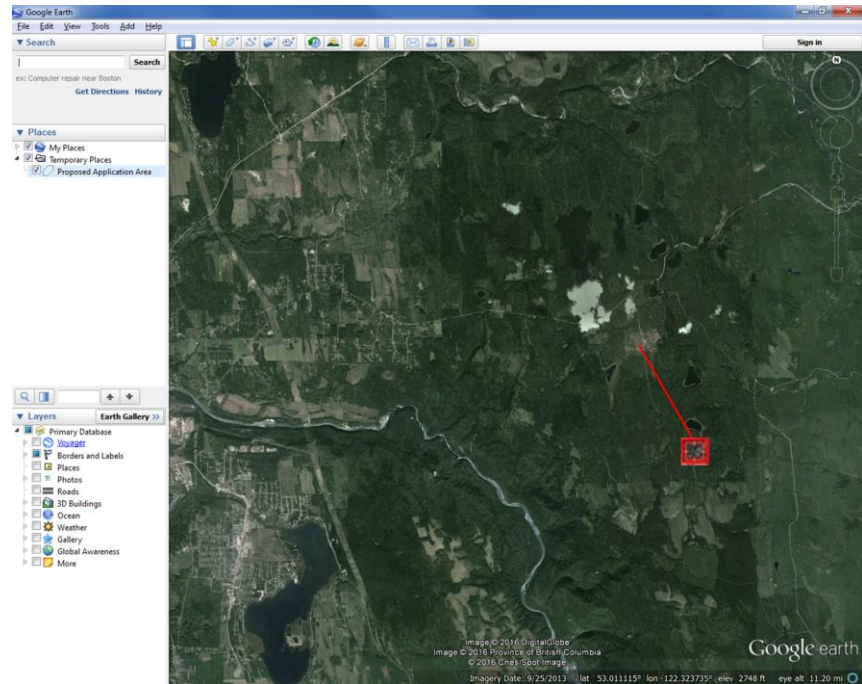

Pick the point on the map to place your first point and click the left mouse button.

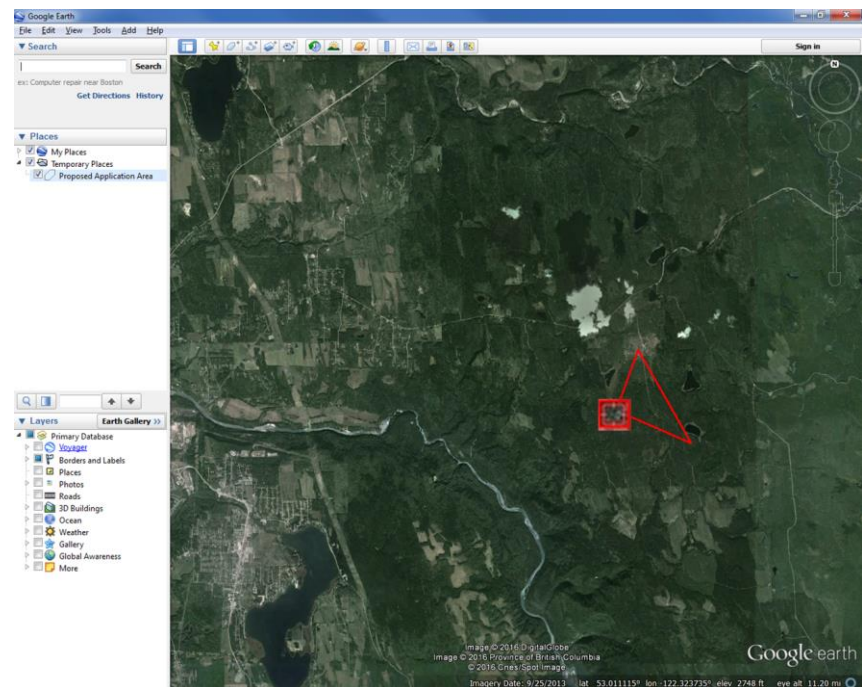

When a point is drawn on the map, a 'hand' icon will appear. This hand icon also appears any time your cursor hovers over a digitized point.

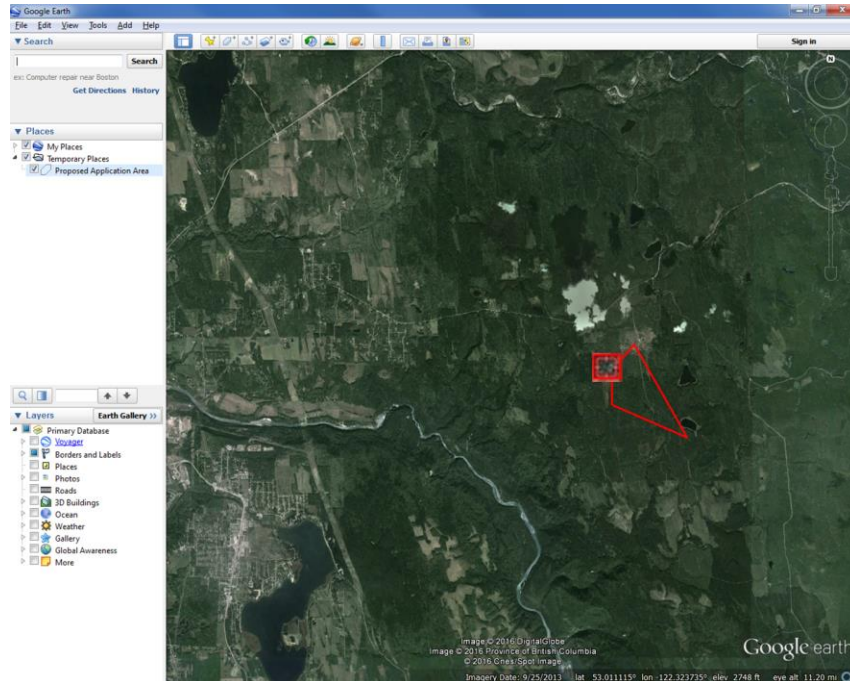

Place the square cursor  at your second point and click the left mouse button again.

Place the square cursor  at your third point and click the left mouse button. Do this for every point required to draw your area of interest.

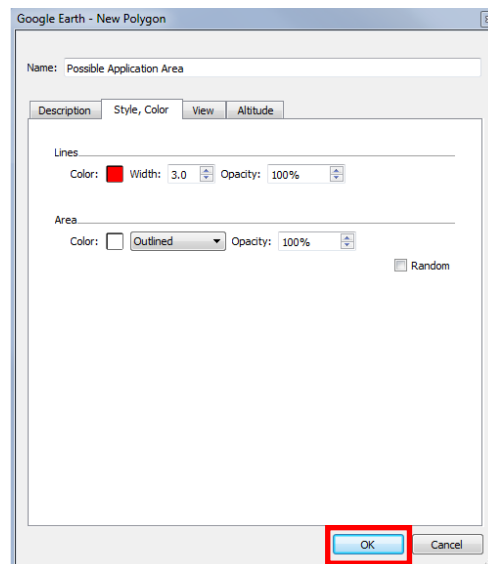

Remember to draw the area of interest in a clockwise direction.

When defining a shape, you can go back and 'undo' a previous point by clicking the right button on your mouse. You then reposition the square cursor and left click to set the point.

When you are finished defining the area, click on 'OK'.

The points that you picked will form a "shape". A shape outlines and defines the area you are interested in. Your shape might look something like this example:

On the bottom of your screen, you'll notice some useful information about the area displayed on the screen. You can use these coordinates to find the location again, confirm the elevation or even see how far above the earth's surface you are viewing the land.

**Tip - If you have navigated away from your area of interest and want a quick way to return to your original location, double-click on the file name you created in the 'My Places' or 'Temporary Places' section of the left navigation window.*

4b. You can also create an area of interest using the **'Add Path'** (line) tool to delineate a line or road. The 'Buffer' functionality is then used to create a geomark with an area. Creating an area of interest using the buffer functionality will be explained in Step 14.

The Path tool is located on the main toolbar.

When the **'Add Path'** tool is selected, a new screen pops up. Use this screen to name your application area and to note important information about the area. This information may help others (such as FrontCounter BC) process your inquiry.

The image is a screenshot of the 'Google Earth - New Polygon' dialog box. The 'Name' field is highlighted with a red box and contains the text 'Possible Application Area'. Below the 'Name' field are four tabs: 'Description', 'Style, Color', 'View', and 'Altitude'. The 'Description' tab is selected and highlighted with a red box. Below the tabs are two buttons: 'Add link...' and 'Add image...'. Below these buttons is a text area containing the text 'I might be interested in applying for this area for a gravel pit.' At the bottom of the dialog box are two buttons: 'OK' and 'Cancel'.

****Tip - Do not close this box or press OK until your area is defined.***

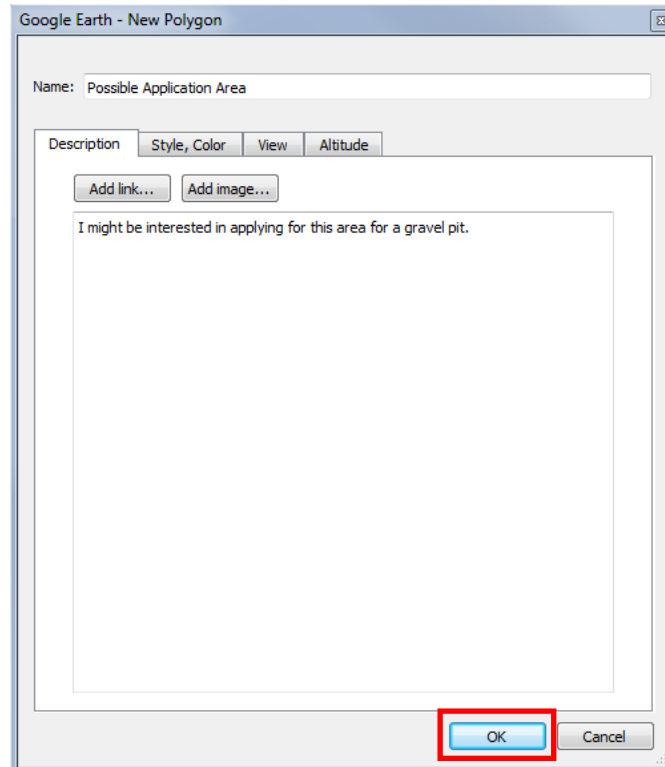

****Tip - It is recommended to 'Name' your area so it is meaningful and can be recognized (eg: John Doe Private Moorage area of interest). Unique descriptions can be used to define multiple polygons (eg: Cutblock 1, Cutblock 2).***

You may have noticed your mouse cursor now looks like a square.

Use the left button on your mouse to pick the points that will delineate the path or line you are interested in.

When you are finished drawing the path, click on **'OK'**.

4c. Use the same steps outlined in 4b to create an area of interest using the **'Add Placemark'** (point) tool.

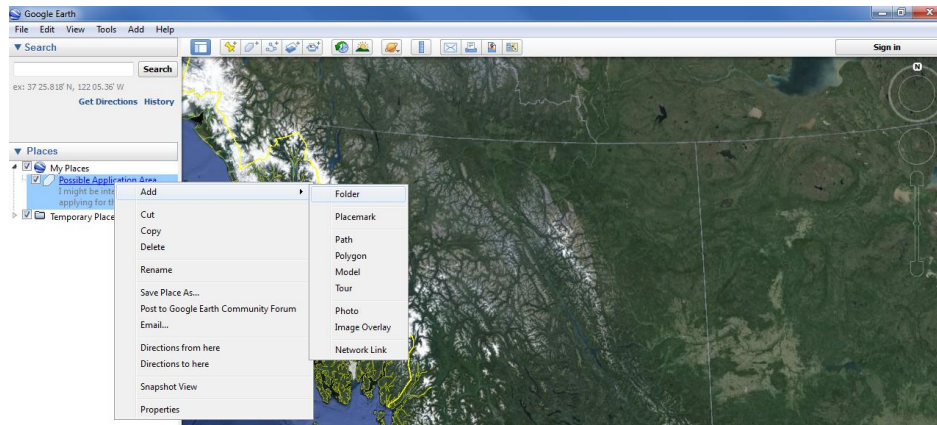

Step 5

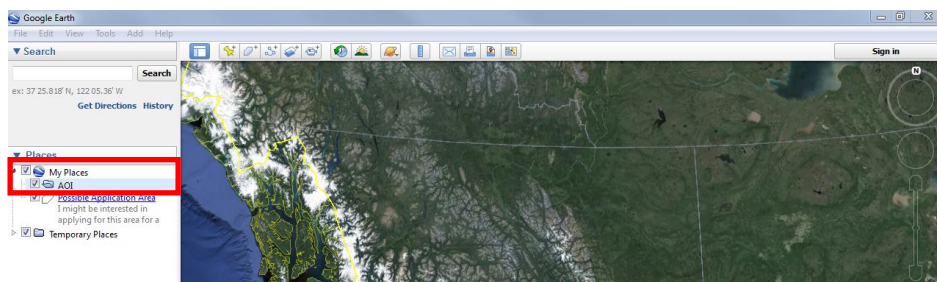

Defining Multiple Shapes in one geomark

To create a geomark that defines multiple shapes or polygons:

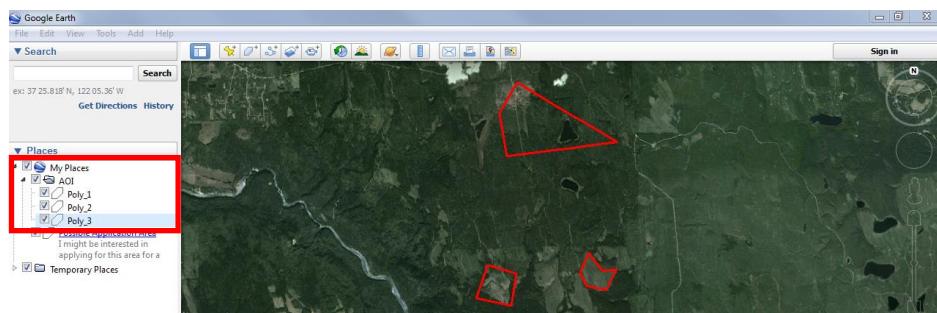

- i. Create a folder in your Google Earth session. Right click on 'Temporary Places' in the left-hand table of contents, click **'Add'** and then **'Folder'**. Name your folder appropriately.

- ii. Click once on the newly created folder so it is highlighted and then create a polygon as per Step 4.

- iii. Create as many polygons as required in that folder as per the above steps. Having multiple polygons in your newly created folder will look like the following.

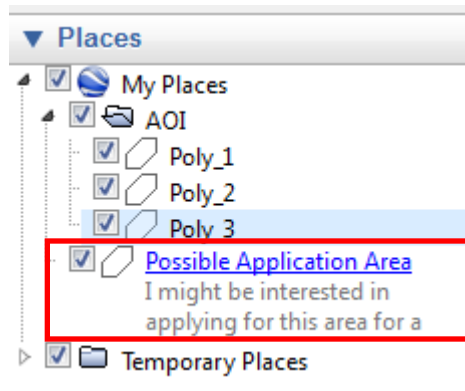

If you want to delete any of the areas you created, the next step of this tutorial will show you how to delete a shape.

Step 6

Deleting Shapes

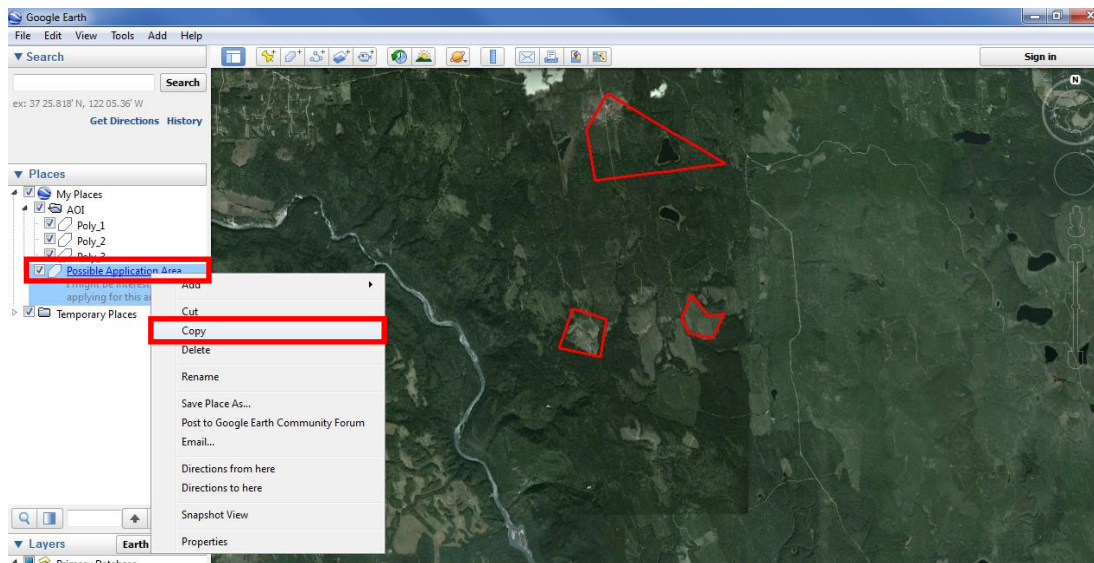

To delete your shape, click on the name of the shape you created. You will find the shape name in the "My Places" or "Temporary Places" section of the left navigation window.

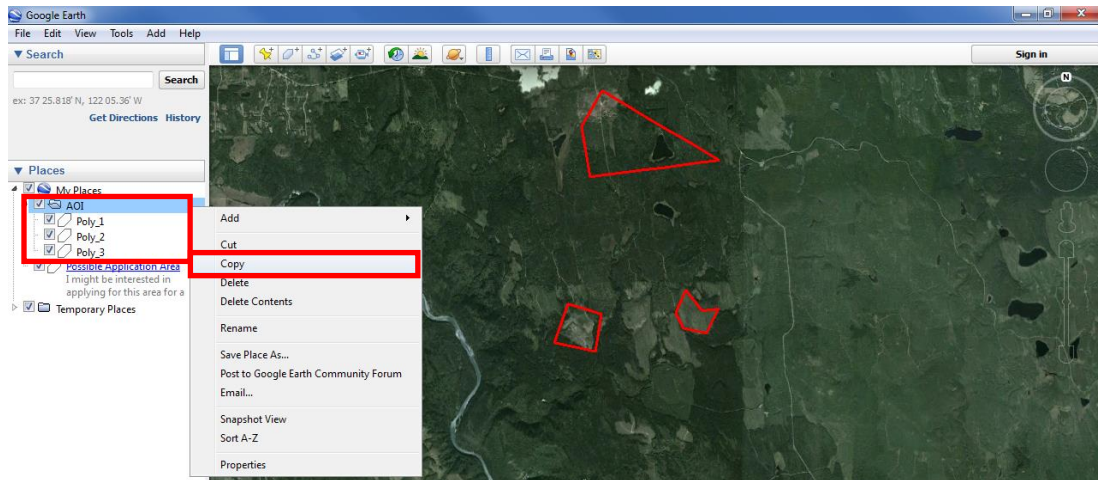

Once you've selected the shape name, click the right button of your mouse. From the list of options presented, choose **Delete**. The shape will be removed from your screen and the shape name will disappear. Use the **Polygon Tool** to outline the area again.

Step 7

Step 7: Once your area of interest is defined, your area of interest name will appear in the left-hand table of contents. Click on the name once in the table of contents to highlight it and then click your right mouse button and select '**Copy**'.

If you have created a new folder that contains multiple polygons, click once on the name of the folder to highlight it, and then click your right mouse button and select '**Copy**' to copy the entire folders' contents.

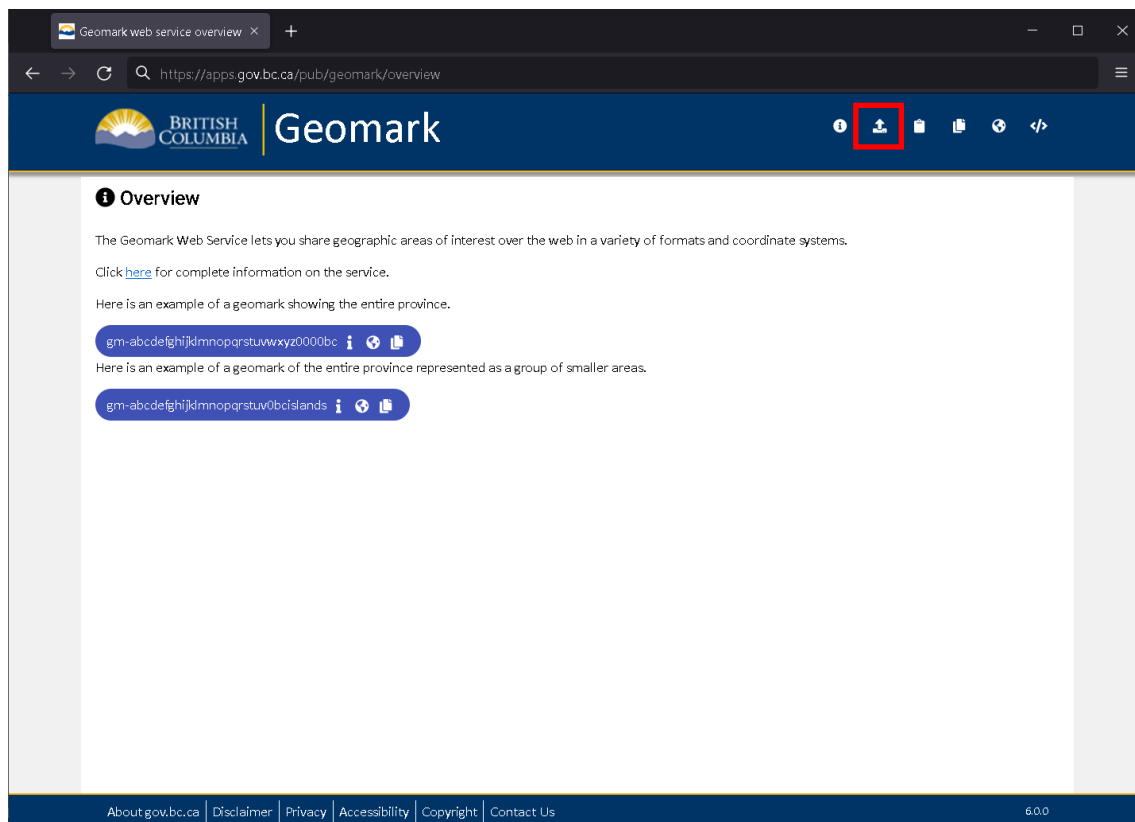

Step 8

Step 8: Using your internet browser, click [here](https://apps.gov.bc.ca/pub/geomark/overview) to view the main Geomark Web Service Webpage.

Step 9

Step 9: Click on the 'Create from Clipboard' button in the top right corner of the screen.

Step 10

Step 10: A form will pop up in a new window.

Create Geomark from clipboard X

https://apps.gov.bc.ca/pub/geomark/create/clipboard

Geomark

Create from Clipboard

General business example - only use this option if your Google Earth version is 4.9 or less.

Use this form to Construct a new geomark from KML you have copied to the clipboard. Using the clipboard is necessary only if you have Google Earth v4.3 or earlier installed on your machine because Create Geomark from Google Earth doesn't work with these early versions.

Buffering Shapes

A buffer is a zone around a map feature measured in the units of distance indicated. Example, a buffer width of 100m will result in total distance of 200m or 100m on each side of the line feature. More detailed information regarding buffering shapes can be found in the Geomark Service application.

Step 15

Step 15: To buffer the polygon, line or point created above, enter the desired buffered distance in metres in the text box provided.

NOTE: A line or point cannot be converted to a geomark unless a buffer width is entered. All resulting geomarks will NOT store or show the original point, line or polygon.

Create Geomark

About gov.bc.ca | Disclaimer | Privacy | Accessibility | Copyright | Contact Us

6.0.0

Step 16

Step 16: Click the 'Create Geomark' button.

Create Geomark from clipboard X

+

— □ ×

← → ↺ 🔍 https://apps.gov.bc.ca/pub/geomark/create/clipboard

 **Geomark** ⓘ ⬆ ⬇ ⬅ ➡ ↻

Create from Clipboard

General business example - only use this option if your Google Earth version is 4.9 or less.

Use this form to Construct a new geomark from KML you have copied to the clipboard. Using the clipboard is necessary only if you have Google Earth v4.3 or earlier installed on your machine because Create Geomark from Google Earth doesn't work with these early versions.

Click [here](#) to access the tutorial.

Create Geomark

About gov.bc.ca | Disclaimer | Privacy | Accessibility | Copyright | Contact Us

6.0.0

Step 17

Step 17: Once the geomark is created, a geomark ID will be displayed. Save the full web address or URL, which includes the geomark ID, to your personal directory as this web address will allow you to access the geomark in the future or pass on to other parties for access to your area of interest. If the web address is lost before it is saved, you will need to create another geomark as there is no 'search' capability for retrieval.

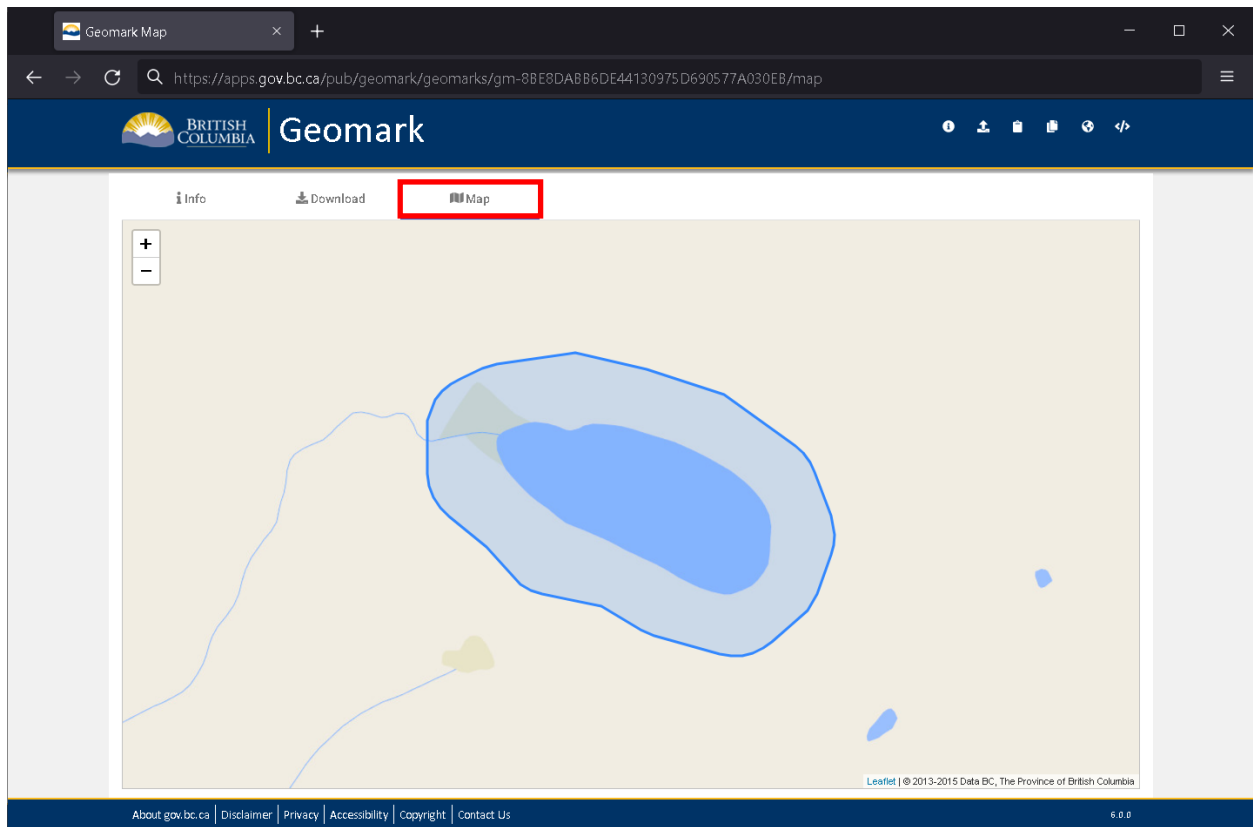

The screenshot shows the 'Geomark Info' page in a web browser. The browser's address bar is highlighted with a red box and contains the URL: `https://apps.gov.bc.ca/pub/geomark/geomarks/gm-8BE8DABB6DE44130975D690577A030EB/info`. A red arrow points from this URL to the text 'Geomark URL with ID'. Another red arrow points from the same URL to the text 'Geomark Link'. The page itself has a blue header with the 'BRITISH COLUMBIA' logo and the word 'Geomark'. Below the header, there are tabs for 'Info', 'Download', and 'Map'. The 'Info' tab is active, showing a 'Click to Copy Geomark URL' button and a list of instructions. Below this, the 'Geomark Report' is displayed, which includes the following details:

- ID: gm-8BE8DABB6DE44130975D690577A030EB
- Creation Date: 2022-01-11
- Expiry Date: 2022-04-11
- Bounding Box (WGS84): -120.367367,50.699354,-120.363711,50.701493
- Centroid (lat,lon): 50.700411,-120.36558
- Geometry Type: Polygon
- Geometry Count: 1
- Vertex Count: 39
- Length: 800.292 m
- Area: 50 146 m²
- Minimum Clearance: 13.575 m

At the bottom of the report, there are three green buttons: 'Valid', 'Simple', and 'Robust'. A red bracket on the left side of the page groups the entire report section under the label 'Geomark Report'.

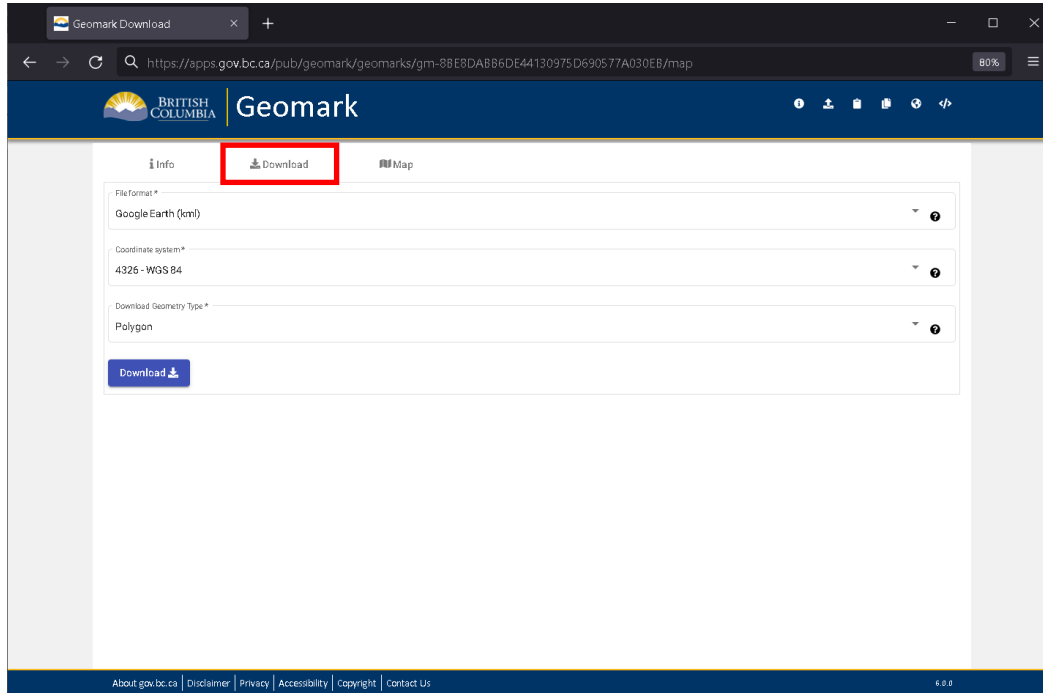

Step 18

Step 18: You can view the file you converted to a geomark using the Map tab.

Step 19

Step 19: Or you can download the geomark (Download tab) into a file format and projection that is more convenient for viewing and / or analysis.

The screenshot shows a web browser window with the title "Geomark Download". The address bar displays the URL: <https://apps.gov.bc.ca/pub/geomark/geomarks/gm-88E8DA8B6DE44130975D690577A030EB/map>. The page features the "BRITISH COLUMBIA" logo and the word "Geomark". Below the header, there are three tabs: "Info", "Download" (which is highlighted with a red rectangle), and "Map". The "Download" tab contains three dropdown menus: "File format *" set to "Google Earth (kml)", "Coordinate system *" set to "4326 - WGS 84", and "Download Geometry Type *" set to "Polygon". Each dropdown menu has a small information icon. At the bottom of these menus is a blue "Download" button with a download icon.

File format *
Google Earth (kml)

Coordinate system *
4326 - WGS 84

Download Geometry Type *
Polygon

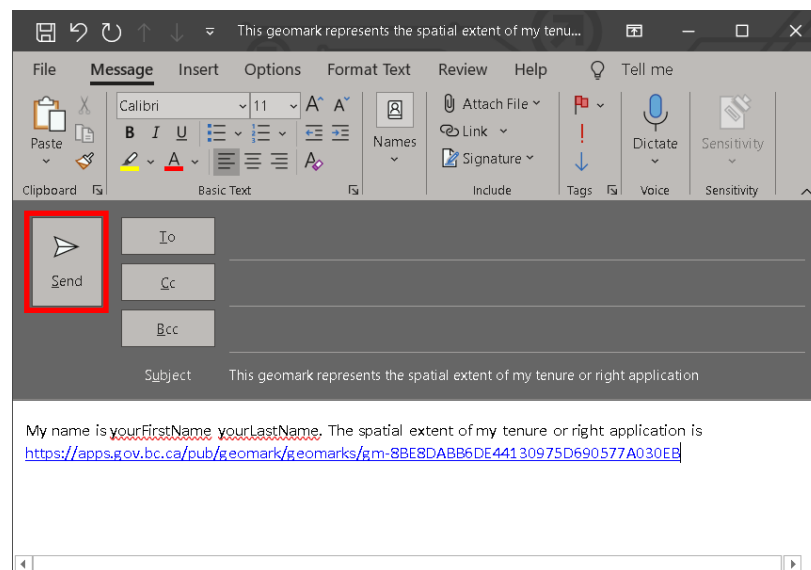

Download

Step 20

Step 20: To send an email to FrontCounter BC about your proposed application area download the geomark (Download tab) into KML format. Click on the area of interest in Google Earth and view the information window.

Click on the link labelled as 'Email to FrontCounterBC' and you will be presented with a pre-formatted email template.

Update the email body with information specific to your application and click 'Send'.
