# **Overall Rating - High**

This notification is intended as an informational bulletin for technical audiences.

# **Summary**

The Vulnerability and Risk Management (VRM) Team is aware of a recently disclosed vulnerability in MongoDB Server running on Windows or macOS.

# **Technical Details**

If the configured to use TLS with a specific set of configuration options that are already known to work securely in other platforms (e.g., Linux), it is possible that client certificate validation may not be in effect, potentially allowing client to establish a TLS connection with the server that supplies any certificate.

This vulnerability is rated as a High Severity.

# **Recommended Action**

- Investigate how your area of responsibility is affected.
- Notify business owner(s) as required.
- Ensure mitigation is performed at your next change window.

Please notify <u>VRM</u> with any questions or concerns you may have.
