

CBA

Canadian Battery Association
Representing the Industry Since 1970

2012 Annual Report

Preface:

The Canadian Battery Association (CBA) was established in 1970 by the Canadian manufacturers of lead-acid batteries. Since its inception, the CBA has worked on a variety of issues and now the Association's focus is on the National Stewardship of Lead-Acid Batteries (LABs) at the end-of-life.

The CBA is the primary Steward in Canada for LABs and the Association has approved Stewardship Programs in Manitoba and British Columbia. Interstate Battery Systems of America and Call2Recycle also have stewardship programs for lead-acid batteries in Canada.

The most important aspect of the CBA's National Stewardship Program is that the end-of-life LABs have a positive residual value because of the inherent value of lead as a commodity. Because of the positive value of lead, there is a complex, private sector market and recycling infrastructure across Canada that handles more than \$150,000,000/yr of recyclable lead-acid batteries.

The CBA remains committed to developing a National Stewardship Program for Lead-Acid Batteries and the CBA plans to expand our programs to the remaining Provinces and Territories.

For more information about the CBA and its stewardship programs, please contact your CBA member or visit our website www.canadianbatteryassociation.ca. For information about where the public or industry can drop used LABs at no charge to ensure proper recycling, go to www.recyclemybattery.ca.

D'Arcy O'Neill,
President
Canadian Battery Association

Executive Summary

The Canadian Battery Association (CBA) officially started its Stewardship Program first in Manitoba on April 1, 2011 and in British Columbia on July 1, 2011 and 2012 represents the first full year of stewardship for the CBA.

The Stewardship of Lead-Acid Batteries (LABs) in Canada is influenced by three important factors:

1. the interface with the public for new and used LABs is primarily at commercial retail businesses (e.g., repair shops);
2. LABs have a significant commodity value at the end-of-life with an estimated economic value of \$150,000,000 per year in Canada;
3. There is a significant independent recycling infrastructure that recovers the LABs from the commercial and industrial operations.

The CBA established a comprehensive network of depots for both the public and industrial consumers across Canada. The tables below summarize the number of depots by Provinces and Territory.

Summary of Lead-Acid Battery Depots for the Public by Province

BC	AB	SK	MN	ON	PQ	NB	PEI	NS	NFL	NT	YT	Total
170	67	20	81	224	110	23	2	23	12	1	1	734

Summary of Depots for Industrial Lead-Acid Batteries by Province

BC	AB	SK	MN	ON	PQ	NB	PEI	NS	NFL	NT	YT	Total
22	14	5	5	20	12	4	0	2	1	0	0	83

There are 734 depots across Canada for the public located primarily at Retail Locations where new Starting, Lighting and Ignition (SLI) type LABs are sold (ie SLI batteries start your vehicles, boats and equipment). There are 83 depots across Canada for the larger industrial LABs. These depots are warehouse operations because of the industrial batteries can be extremely heavy.

The CBA's Collection Rate for SLI batteries was 87.1% and 85.4% in Manitoba and BC respectively. The recovery rates for other provinces are being developed and will be published when the program is expanded to that Province.

The CBA has a variety of priorities for 2013 including:

- Compliance for first importers of batteries into BC and Manitoba;
- Regulatory Compliance for CBA members; and,
- Awareness Program for the commercial and industrial "consumers".

1.0 Introduction

The Canadian Battery Association's (CBA) 2012 Annual Report details its National Stewardship activities as well as the regulatory requirements of the Association in Manitoba and British Columbia.

The recycling of lead-acid batteries (LABs) in Canada is driven primarily by the commodity value of lead. The average vehicle LAB in 2012 had a commodity value of between \$5 and \$15 depending on the size the battery and the transportation costs to a smelter.

The challenge for the CBA is to develop a National Stewardship Program for LABs that:

- preserves the private sector market for recycled lead;
- promotes the safe collection, storage and recycling of LABs;
- confirms the high collection rates on a Province-by-Province basis.

1.1 *Program Goals and Objectives of CBA*

When the Canadian Battery Association was established in the 1970's, the founding members had five primary objectives. The objectives are:

- To promote and further the best interests of the members, and industry, in all reasonable, lawful and proper ways.
- To develop standards of manufacture, performance, safety, and nomenclature of batteries.
- To provide a forum for the exchange of legally exchangeable information on all subjects of common interest to members.
- To collect, analyze, and distribute to its members, technical and statistical data, and
- To unite in making representation to government, and other public bodies, on questions of common concern to members, and to obtain information with respect to, and inform members of government and other actions affecting members.

Within the above stated goals, the CBA has focused in recent years on Environmental Stewardship due to expanding requirements under Provincial Extended Producer Responsibility Regulations.

1.2 *Approved Stewardship Plan and Membership*

On April 1, 2011, lead-acid batteries were included in Manitoba's Household Hazardous Material and Prescribed Material Stewardship Regulation and on July 1, 2011 British Columbia's Recycling Regulation. The CBA will be developing a voluntary stewardship program in New Brunswick in 2013.

Appendix 1 summarizes the “Stewards” that are signatories to the CBA’s Stewardship Program in Manitoba and British Columbia. These Stewards provide sales and collection data that are summarized in this report.

The Manufacturers and National Distributors listed in Appendix 1 have assumed the stewardship obligations on behalf of the thousands of wholesalers and retailers – even when the retailer owns a “Brand” of LAB. In addition, some of the National CBA Members listed in Appendix 1 have Parent Companies in the USA that ship LABs directly to Canada. It is important to note that the sales data of the Parent Companies are not summarized by the Canadian Subsidiary or reported by the CBA.

Like all Stewardship Programs, there is a significant portion of LAB sales are made by businesses that are not compliant with an Approved Stewardship Program. A very preliminary estimate of non-Stewarded sales is 15% and the LABs are believed to be sold in:

- Lead-acid batteries incorporated in a product (e.g., vehicles, motorcycles, off-road equipment);
- UPS Systems for computers, telecoms, etc;
- Large Industrial Motive and Stationary Batteries shipped directly from the USA to customers in Canada.

1.3 *Interaction with Other Programs*

Interstate Battery System of America (IBSA) has a competing Stewardship Program in Manitoba and British Columbia. The CBA has reached out to IBSA to work cooperatively on the collection of LABs in remote communities as well as share consolidated data so that the two stewardship programs can calculate an overall collection rate for LABs on a Province by Province basis.

The Rechargeable Battery Recycling Corporation (RBRC) operates the Call2Recycle Stewardship Program in Canada. The Call2Recycle Stewardship Program focuses on smaller batteries including small Sealed Lead-Acid Batteries used in mobility scooters, fire emergency devices, emergency exit signs and small UPS back-up batteries for computers. The LABs in the Call2Recycle program are 5kg or less. For more information about the Call2Recycle Stewardship Program in Canada go to www.call2recycle.ca.

The CBA has established a positive working relationship with Call2Recycle and the two programs are working collaboratively were appropriate to provide consumers with a comprehensive recycling program for batteries and accurate collection estimates for LABs in Canada.

2.0 Collection System and Accessibility

To meet the requirements of the Stewardship Regulations in Manitoba and BC, the CBA identified a number of depots where the public and industry can drop off end-of-life LABs at no cost. The depot network will then ensure that the LABs dropped at these facilities will be stored, transported and recycled to Federal and Provincial standards.

2.1 Depots for Public

A detailed list of depots for the public is included in Appendix 2. The following table summarizes the number of depots for the public on a Province by Province basis. The public will typically drop off small quantities of SLI batteries (SLI = Starting, Lighting and Ignition). The most common application of SLI batteries is the starting of the internal combustion engines in our vehicles, motorcycles, boats etc.

Province	Depots For SLI* Lead-Acid Batteries		
	2012 (Expected)	2012 (Actual)	2013 (Projected)
British Columbia	175	170	170
Alberta	NA	67	67
Saskatchewan	NA	20	20
Manitoba	No Targets Set	81	81
Ontario	NA	224	224
Quebec	NA	110	110
New Brunswick	NA	23	23
Nova Scotia	NA	23	23
Prince Edward Island	NA	2	2
Newfoundland & Labrador	NA	12	12
North	NA	1	1
Totals		734	734

*SLI=Starting, Lighting and Ignition

2.2 Depots for Industry

Because the industrial lead-acid batteries can be very large, the CBA directs the large motive and stationary batteries to warehouse operations. The industrial batteries are large and heavy and require equipment to move them in a warehouse. A detailed list of the depots for the large industrial LABs is listed in Appendix 3.

In 2012, the CBA identified 22 locations in British Columbia and 5 in Manitoba for the large industrial LABs. The table below summarizes the number of warehouses by Province that will accept industrial batteries.

Province	Depots For Industrial Batteries		
	2012 (Expected)	2012 (Actual)	2013 (Projected)
British Columbia	20	22	22
Alberta	NA	14	14
Saskatchewan	NA	5	5
Manitoba	TBD	5	5
Ontario	NA	20	20
Quebec	NA	12	12
New Brunswick	NA	4	4
Nova Scotia	NA	2	2
Prince Edward Island	NA	0	0
Newfoundland & Labrador	NA	1	1
North	NA	0	0
Total		83	83

The long-term goal of the CBA is to have a depot for SLI batteries within 30 minutes of households in urban areas and 45 minutes of households in rural areas.

The public are encouraged to find the closest depots for all Provinces using the web-based locator program at www.recyclemybattery.ca. Commercial users of motive and stationary batteries are encouraged to contact the CBA supplier listed in Appendix 3 or on www.recyclemybattery.ca to ensure storage, packing and transportation requirements under the Transportation of Dangerous Goods for these large LABs are met.

3.0 Collection Rate

The Collection Rate for the CBA was calculated on the weight of LABs recovered in the Province divided by the weight of LABs sold in the Province. No adjustments for life cycle times or sales growth of LABs were made to the Collection Rate.

The annual growth rate of LABs for vehicles and stationary type batteries was estimated to be 1.4% and 6% respectively. The high growth rate for stationary batteries coupled with their long life cycle (up to 20 years) will need to be addressed in the CBA statistics in future years. The relatively short life cycle for vehicle batteries (5 years) coupled with a slower growth rate will have less impact on the overall collection statistics.

3.1 **Manitoba**

The 2012 sales and collection rates for CBA members in Manitoba is summarized in the table below. The Manitoba Collection Rate for the SLI lead-acid batteries (primarily vehicle/consumer batteries) in 2012 was 87.1%.

Year	Lab Sales	LABs Recovered	Collection Rate
2012	6,118,000kg	5,326,000kg	87.1%

The combined Collection Rate for the Stewardship Programs operated by the CBA and IBSA was slightly higher at 89.7%.

Year	CBA & IBSA* LAB Sales	CBA & IBSA* LAB Recovery	Collection Rate
2012	6,551,000kg	5,878,000kg	89.7%

* IBSA = Interstate Battery System of America

The recycling rate for industrial batteries was not calculated because independent recyclers collect these large industrial batteries for recycling. Because these businesses that provide the recycling of industrial lead-acid batteries do not provide recycling data to the CBA, the recovery rates for these styles of LABs cannot be determined.

3.2 **British Columbia**

The sales and collection volumes in BC is summarized in the tables below.

Year	CBA SLI Sales	CBA LABs Recovered	Collection Rate
2012	14,667,000kg	12,531,000kg	85.4%

The Collection Rate of 85.4% by CBA Members is slightly above the second year target in BC of 85% in BC's Approved Stewardship Plan. This collection rate is based only on the sales and collection volumes of SLI batteries reported by CBA Members.

The combined Collection Rate for the Stewardship Programs operated by the CBA and IBSA was higher at 96.2%.

Year	CBA & IBSA* LAB Sales	CBA & IBSA* LAB Recovery	Collection Rate
2012	16,697,000kg	16,059,000kg	96.2%

* IBSA = Interstate Battery System of America

See Section 3.2 for a more detailed discussion the estimation of the overall Collection Rate.

Because the metal recyclers that recover the industrial lead-acid batteries do not provide recycling data to the CBA, the recovery rates for the industrial LABs cannot be determined in BC.

3.3 Other Sales and Recoveries

3.3.1 Other Stewardship Programs

There are several other programs and potential stewards that sell and/or recover LABs in Canada. A brief summary of the CBA's interaction with those programs is summarized in this section.

Call2Recycle:

The CBA has been coordinating with Rechargeable Battery Recycling Corporation that operates the Call2Recycle program in Canada. Call2Recycle and the CBA's Stewardship programs should be seen as complimentary by providing a comprehensive program for small and large batteries of all makes of consumer and industrial batteries.

The CBA and RBRC will continue to collaborate in areas of mutual interest.

Interstate Battery System of America:

Interstate Battery System of America (IBSA) has a competing Stewardship Program for LABs in Manitoba and BC. The CBA received IBSA's data for British Columbia and those numbers were integrated into the 2012 Annual Report (see Sections 3.1 and 3.2).

The data from IBSA's Stewardship Program is important to calculate the overall collection rate for LABs plus prevent any "double counting" of sales or collection information.

Note that in 2012 CBA members sold 364,097 kg of end-of-life LABs to IBSA in British Columbia. The end-of-life LABs were included in the CBA's collection rates because the CBA member recovered the battery from the end-user. No sale of end-of-life LABs to Interstate were reported to the CBA in Manitoba in 2012.

3.3.2 Unaccounted Sales Data

The CBA undertook a very preliminary estimate of the unaccounted LAB sales in Manitoba and British Columbia. Initial findings suggest that the volume of unaccounted LABs are in the order of 875,000 and 3,500,000kg in Manitoba and BC respectively or 17% of the sales for each Province.

The largest component of unaccounted sales included LABs contained in products or large industrial batteries. The products would include:

- Vehicles, motorcycles, off-road equipment (e.g., skidoos);
- UPS Systems for computers;
- Large stationary and motive batteries imported from USA

3.3.3 Unaccounted Collection

The largest component of unaccounted LAB collection is from independent metal recyclers that collect end-of-life LABs and sell directly to the smelters or export to the USA.

In 2011, the CBA obtained the 2011 smelter and export data for British Columbia only and those results indicate that the independent recyclers account for about 5,200,000 kg of LAB collection in BC – or about 25% of all LABs collected in BC. The CBA could not do a similar calculation for Manitoba because of the CBA has not received the data from smelters in Eastern Canada at this time.

The CBA did not undertake an estimation of the unaccounted collection in 2012.

4.0 Pollution Prevention Hierarchy

4.1 *Product Design and Material Content*

The recycling of Lead-Acid Batteries (LABs) is relatively straight forward because the product design is simple and all LABs are formulated on the same basic design and chemistry.

There are three basic components to a LAB – metals (lead and lead tetraoxide. Antimony or calcium are added to the metal to provide structural support for the lead anode and cathodes); the electrolyte as sulphuric acid and plastic that forms the casing and the separators between the cathode and anode.

By weight, approximately 70 - 80% of the LAB will be metal (including oxides and sulphates of lead) and the electrolyte will be about 12.5-15% by weight and the plastic is about 5-10% depending on the design of the battery.

The shipment and recycling of LABs is done by commercial transport and LABs are normally shipped “wet” (ie: containing sulphuric acid). Packaging will include the pallet, cardboard and plastic wrap. No estimates are available at present on the proportions of packaging and the percentage of overall shipping weight.

4.2 Reuse of Recovered Lead-Acid Batteries

Reuse statistics are not reported to the CBA because:

- Reusable batteries will be reconditioned by the recycler and sold at a higher premium. Some recyclers will refurbish as much as 20% of the used lead-acid batteries collected from retail outlets.

There are market forces that provide an incentive for the recyclers to recondition and sell used batteries – used vehicle batteries can be sold for \$35 to \$45.

LABs that cannot be reused will be declared a waste and sold to a smelter for approximately \$10 to \$15 depending on the market for lead-acid batteries in the community.

- Industrial batteries are typically complex interconnection of battery cells. Each battery cell can weigh between 35 and 50kg. A typical motive forklift battery can have 24 individual cells and have a combined weight of over 1000kg. Cells for stationary batteries can also weigh up to 50kg and a single stationary battery backing up computer banks can contain hundreds of cells.

When industrial batteries are recovered, each used cell is assessed at a warehouse and any viable cells are refurbished and reassembled in a used industrial battery.

Again, the economics of a refurbished industrial battery favour the refurbishment of industrial cells and the sale of used motive and stationary batteries.

4.3 Fate of Recycled Lead-Acid Batteries

LABs that cannot be refurbished are transported to smelters for recycling. In Manitoba, the waste LABs will be shipped to smelters in Ontario,

Quebec and to the USA. In British Columbia, the majority of the waste LABs will be shipped to smelters in BC and the USA.

At the smelter, the LABs are broken and the three materials are separated. The fate of materials is summarized in the following table.

Material	Description	Fate
Metals	99% of Lead is recovered during the smelting process and sold as a commodity	Recycled and sold as Commodity
	1% of Lead contained in dross – a waste from the smelting process	Private Landfill
	Antimony and Calcium are used to provide strength within the lead plates	Remain as an alloy of the lead after smelting.
Electrolytes	100% of Sulphuric Acid Sold is recovered and sold as an input to Ammonium Sulphate fertilizer production	Recycled and sold as a commodity or neutralized for disposal
Plastics	The primary Plastic in a battery is the Polyurethane Case that provides structure to the cell or battery	Recycled and used to make new battery casings
	Within each battery, Plastic Separators are used to Isolate the Positive and Negative plates in a cell	Burned at the smelters for energy recovery and creating an oxygen free environment during the smelting process.

4.4 Material Diversion

Based on the fate of materials the waste LABs collected by CBA members achieved the following diversion rates using the Pollution Prevention Hierarchy. The figures below are for lead-acid batteries recovered in BC.

Product	Material	Per Cent of a SLI Battery	Per Cent Recycled	Recycled (kg)	Energy Collection (kg)	Landfilled (kg)
Metals	Lead	52%	99%	6,516,000	N/A	75,000
	Oxides / Sulphates of Lead	18%	NA	NA	NA	NA
	Other Metals: Calcium	TBD	TBD	TBD	N/A	TBD

	Antimony					
Plastic	Casing	8%	75%	705,000	235,000	NA
	Separators	4%	0%	0	500,000	TBD
Electrolyte	Sulphuric Acid	12.5%	100%	1,565,000	N/A	N/A
Shipping Materials	Wood Pallets	3%	0%	NA	376,000	TBD
	Cardboard	1%	0%	NA	125,000	TBD
	Plastic Wrap	1%	0%	NA	125,000	TBD
	Totals			8,722,400	1,362,775	65,200

Based on the preliminary information collected from the smelters that recycle lead-acid batteries, the majority of the material recovered in the CBA's Stewardship Program is recycled.

4.5 Waste Characterization Studies

In 2012, the CBA participated with other Stewards and Stakeholders in British Columbia to develop the Waste Characterization Tool. The tool was developed to standardize Waste Characterization Studies used to determine the quantity of stewarded and non-stewarded products in the municipal waste stream.

The CBA will participate in the Waste Characterization Studies in 2012 and 2013 to determine the effectiveness at diverting LABs from landfills.

5.0 Consumer Awareness

The CBA has a unique stewardship program in that most of its "consumers" do not handle the product when a lead-acid battery is at the end-of-life. The majority of new lead-acid batteries are installed in vehicles by retail businesses (e.g., Canadian Tire stores).

Traditionally, consumer awareness is thought to be the "awareness of the public"; however, the CBA feels that decisions to recycle LABs occurs at the retail and industrial level and that there are very few members of the public that "do-it-yourself" and change the LAB in their vehicle.

The CBA did not conduct any Consumer Awareness surveys in 2012 because of the work being completed by the Stewardship Agencies of BC (SABC) and the BC Ministry of Environment. The stewards that comprise SABC will be designing a comprehensive Consumer Awareness survey for most of the stewarded products. The joint Consumer Awareness survey will be more effective and efficient and is expected to be completed in 2013 and 2014.

5.1 Websites

The websites www.canadianbatteryassociation.ca and www.recyclemybattery.ca were established in 2011. These websites are the main portal for the public, industry and agencies such as Green Manitoba or the Recycling Council of BC to direct the public to the closest depot.

The 2012 web statistics for www.recyclemybattery.ca are summarized below and the data shows a significant growth in the use of the website by the public.

Month	Unique visitors	Number of visits	Pages	Hits	Bandwidth
Jan 2012	236	401	3087	6509	38.63 MB
Feb 2012	268	393	4028	8146	42.21 MB
Mar 2012	452	892	6606	14150	79.24 MB
Apr 2012	645	1119	12457	22695	141.16 MB
May 2012	740	1230	13913	26284	160.34 MB
Jun 2012	933	1624	17086	33341	224.17 MB
Jul 2012	872	1592	21585	41290	241.67 MB
Aug 2012	1124	2001	22518	44433	303.03 MB
Sep 2012	1090	2012	21273	40665	317.84 MB
Oct 2012	1354	2521	34338	61006	443.67 MB
Nov 2012	1571	2774	31051	63092	439.02 MB
Dec 2012	1506	2759	30253	62687	384.29 MB

5.2 Recycling Agencies

The CBA has provided financial support to the Recycling Council of BC (RCBC) and Green Manitoba to be the primary point of contact in the event that the public have questions regarding the recycling of LABs.

In British Columbia, the CBA has financially supported the RCBC Hotline and Recyclepedia to promote the recycling of LABs. In addition, the CBA has been an active participant with other Stewards in the Stewardship Agencies of BC (www.bcstewards.com).

In Manitoba, the CBA has provided financial assistance to Green Manitoba for similar services.

5.3 Decal for Every CBA Battery

The CBA developed a common brand in both official languages that will promote the recycling of LABs. The digital copy of decal was provided to CBA members and they will begin putting the decals on LABs in 2013.

6.0 Program Performance

This section will summarize the accomplishments in 2012, compare of the approved plan's performance for the year with the performance requirements and targets in the regulations and the approved plan and set priorities for 2013.

6.1 Accomplishments in 2012

The CBA was successful in expanding the number of depots for both the public and industrial batteries. In 2012, 734 were established at retail locations across Canada for the public and published on the www.recyclemybattery.ca website. 83 of the depots were warehouse operations that can recover industrial batteries. See Appendix 2 and 3 for a detailed summary of the depots for consumer and industrial batteries on a Province-by-Province basis.

The second priority for the CBA in 2012 was establishing a web-based search tool for the public. www.recyclemybattery.ca was launched in

2012 and the information was shared with Green Manitoba and the Recycling Council of British Columbia for their search engines. The website combined with the communication networks of the two agencies provided the basic portal to the public.

The third priority in 2012 was the clarification of the legal requirements for CBA members and their customers. Lead-acid batteries are considered a “Dangerous Good” under the Federal Transportation of Dangerous Goods Act and “waste” lead-acid batteries are considered a “Hazardous Waste” in BC and Manitoba.

The CBA prepared two bulletins summarizing and an Environmental Management Program has been prepared for the warehouse operations that are managing new, used and waste lead-acid batteries. The CBA will take an active role in communicating the legal requirements to its members and their customers so that lead-acid batteries are collected, stored and shipped safely.

6.2 Comparison to Stewardship Plan Targets

2012 represents the first full year of operation for the CBA in those provinces. The table below summarizes the 2012 Targets and results.

Performance Measures	2012 Targets and Results			
	2012 Stewardship Plan Target	2012 Actual – British Columbia	2012 Actual – Manitoba	2013 Stewardship Target
Awareness	Complete First Consumer Awareness Survey	Postponed to 2013. To be coordinated with SABC’s* survey	Postponed to 2013. To be coordinated with SABC’s* survey	Participate in SABC Consumer Awareness Survey
	Circulate Pamphlet Details to CBA Members for Circulation in Both Official Languages	Participated in SABC’s Recycling Handbook	Participate in the development of Green Manitoba’s website for consumers	Create pamphlet using the model used in the Recycling Handbook
	Establish website for Consumer Information	www.recyclemybattery.ca established and operational	www.recyclemybattery.ca established and operational	Maintain Websites with Current Information
	Develop Standardized Recycling Labels for LABs sold in Canada	CBA Recycling Logo Developed in both official languages	CBA Recycling Logo Developed in both official languages	Integrate Logo into CBA Member Decals

	Support Public Hotlines	Ongoing Support of Recycling Council of BC's Recyclepedia	Ongoing Support of Green Manitoba	Review, Evaluate and Maintain
	Contact 25 Local Governments / yr Basis to assess the effectiveness of the outreach programs.	Postponed to 2014. Worked with SABC to develop mechanism to interact with Regional Districts	Outreach through Green Manitoba	Contact 25 Regional Districts in BC Contact 10 Local Governments in Manitoba
Accessibility	150 depots in BC. No Target in Manitoba	170 at end of 2012	81 at end of 2012	BC: 170; Manitoba: 80;
	30 Minute Travel Time for Public in Urban Areas 45 Minutes Travel in Rural Areas	Not Calculated because of new standards being prepared by SABC	Not Calculated because new standards being developed	To be Completed in 2013
	20 depots for Industrial Battery Collection in BC	22 depots established for Industrial Battery Collection	5 depots established for Industrial Battery Collection	BC: 22 RCF; Manitoba: 5RCF;
	Remote Locations	Pilot Project in Bella Bella, BC	Coordinated by Green Manitoba	Continue to work with Aboriginal Affairs and Northern Development
	Contact 10 Companies in BC that Use Industrial Motive and Stationary Batteries in Remote Areas. No Target for Manitoba	Not Completed	Contacted Manitoba Hydro	Contact 10 Companies in each Province to Promote Collection In Remote Areas
Collection	9,735,000kg Collection Target in BC No Target in Manitoba	12,500,000kg	5,325,000kg	Similar Recovery Volumes in 2013

	85% Collection Rate for CBA	85.4% Collection Rate for CBA	87.1% Collection Rate for CBA	85% Collection Rate for CBA
	Determine Fate of Product Collected in First Year of Program	Ongoing	Ongoing	Ongoing input from Smelters to get greater understanding of recycling processes
Generation, Storage and Transportation	Establish Certified Battery Facility Program for Warehouse Operations Within 2 Years	Completed	No Discussions with Manitoba Conservation and Water Stewardship	Being implemented in 2013
	To Be Completed by end of 2012	5 warehouses inspected. 18 warehouses not inspected.	N/A in 2012	All warehouses in BC to be inspected in 2013
	Initiate Training and Education Program for Safe Storage and Transportation of Lead-Acid Batteries	2 Bulletins Prepared and circulated to CBA Members in BC	N/A in 2012	Maintain Documents
	Ensure Collection Depots, Storage Facilities and Transporters Following CBA Guidelines	5 warehouses inspected	N/A in 2012	To Be Fully Operational in 2013

*SABC – Stewardship Agencies of British Columbia

6.3 Priorities for 2013

6.3.1 Awareness:

The businesses that meets the definition of “consumer” includes retailers that install new batteries in the vehicles for the public and industrial operations that need motive and stationary batteries to conduct business. There are some “do-it-yourself” members of the public that change LABs in their vehicles but these are generally a very small segment of the population.

The Consumer Awareness priorities in 2013 are to:

- undertake a consumer awareness survey in partnership with Stewardship Agencies of BC. The “consumer” that the CBA will focus on includes retailers and industry that are directly involved in the recycling of LABs.
- Work with CBA members to distribute information about the storage and transportation of used batteries to ensure they understand the storage, transportation and recycling requirements for LABs;
- Provide the text (in both Official Languages) for a pamphlet that CBA members can integrate into their warranty, advertising and communication materials with their customers.
- Maintain the CBA’s key recycling website: www.recyclemybattery.ca
- The CBA will contact the majority of the Regional Districts in BC and local governments in Manitoba to assess the effectiveness of the outreach programs. The results of the assessment will be used to modify the communication materials as necessary.

6.3.2 Accessibility:

The CBA plans to maintain the number of retail depot locations for the public to over 730 across Canada. Approximately 170 and 80 depots will be located in BC and Manitoba respectively.

The CBA had 83 depots for industrial batteries in 2012 and no increase is expected in 2013.

6.3.3 Collection:

The CBA needs to expand CBA Membership to brandowners that import LABs into Manitoba and BC in products to reduce unaccounted sales.

Integrate data from smelters and large recyclers to better account for recoveries on a Province-by-Province basis;

Obtain more details on Fate of Materials in Primary and Secondary Smelters.

6.3.4 Generation, Storage and Transportation:

The CBA will be implementing an Environmental Management Program in British Columbia for the safe collection, storage and transportation of LABs. The program will be implemented at CBA members that collect, store and transport LABs.

In British Columbia, an additional 2013 priority will be to help its members update their registrations with the Ministry of Environment under the Hazardous Waste Regulation to ensure the warehouse depots are in compliance and are able to store adequate quantities of “waste” LABs prior to transportation to smelters.

6.3.5 Management

The final priority for the CBA is to expand the program to other Provinces. Priorities include New Brunswick where the CBA has signed a Memorandum of Understanding and Ontario where the province is reviewing its EPR model.

7.0 Financial and Non-Financial Review

7.1 *Financial*

The CBA financial audit was completed by James A. Boyko, CA. The results of the 2012 Financial Audit is summarized in Appendix 4. The CBA has changed the fiscal year end to December 31 during the Federal Incorporation under Part 2 of the Canada Corporations Act.

7.2 *Non-Financial Review*

The Non-Financial Review was conducted by Marcus Barthrop, CA at Green Horwood & Co LLP. The summary of the Non-Financial Audit is summarized in Appendix 5. The 2012 Non-Financial Review was delayed because the CBA attempted to undertake the new Non-Financial Audit proposed by the BC Ministry of Environment.
