

Continuous Improvement Cycles

A continuous improvement cycle is a critical element of the ongoing commitment to raising system performance. District continuous improvement cycles are developed by the senior team to maintain effective and efficient district operations and ensure a sustained focus on the educational success of every student. The district team actions the continuous improvement cycle annually to ensure the **successful implementation and ongoing refinement of targeted strategies** to improve student learning outcomes.

The annual Enhancing Student Learning Report fits into the continuous improvement cycle by providing a public summary of the district team's **review** of and **response** to data and evidence; it also allows a yearly touchpoint for the district team to **reflect** and **plan** between iterations of the long-term Strategic Plan. This annual reporting helps establish and maintain robust planning cycles that continuously improve student learning.

A comprehensive approach to a continuous improvement cycle includes:

- Reviewing, analyzing, monitoring, interpreting, and reflecting on the district's educational outcomes;
- Reviewing, analyzing, monitoring, and reflecting on the district's strategies intended to improve student success and address inequities in student learning;
- Actively collaborating with local First Nations and Indigenous Education Councils;
- Actively engaging with Indigenous communities and organizations, including Métis Chartered Communities, and with other education partners; and
- Aligning district operational plans to implement the adjusted plan based on findings that emerged from data and evidence analysis and engagement with all education partners.

Continuous Improvement Cycle Examples

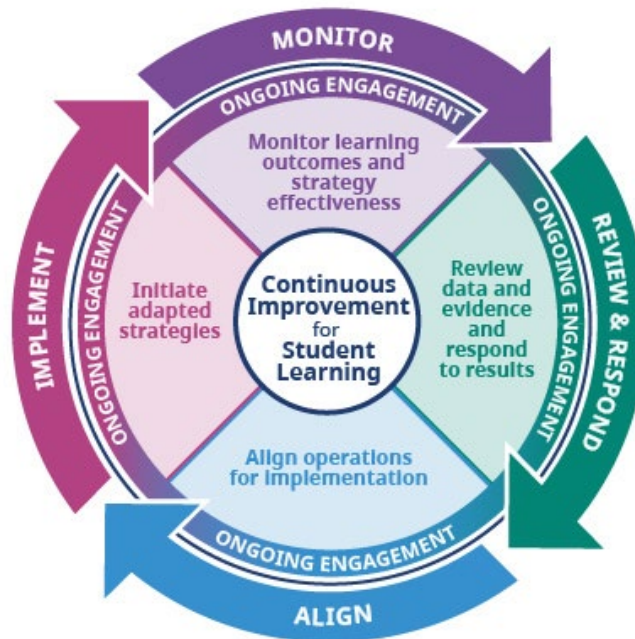

There were many examples of continuous improvement cycles in the 2020-21 Enhancing Student Learning Reports, and the following document shares a handful of examples to assist in district planning.
