How threat actors leverage AI to advance healthcare cyberattacks

The HHS Health Sector Cybersecurity Coordination Center (HC3) issued a brief regarding artificial intelligence (AI) and the threats it may pose to healthcare cybersecurity. As AI continues to advance, organizations across all sectors will have to adjust their risk mitigation strategies to account for innovation and the new cyber threats that come with it.

Five common means of staging cyber attacks

The number of cyber attacks on companies and institutions in Hamburg continues to grow and from 35 in 2018 to 227 in 2022, according to the Data Protection 2022 report issued by the Commissioner for Data Protection and Freedom of Information (HmbBfDI) in late March. Apart from commercial and industrial companies, universities, media companies and Hamburg Airport are increasingly being targeted. Meanwhile, Germany's Federal Office for Information Security (BSI) is monitoring cyber security closely and offering practical assistance to combat the risk of cyber attacks both reactively and preventively. The most widespread cyber attacks can take the following shape, according to BSI.
