# About the Major Projects Inventory

The BC Major Projects Inventory (MPI) contains summary information on major projects in the Province of British Columbia, Canada, that are over \$15 million (Cdn.) capital cost, or \$20 million in the Lower Mainland–Vancouver area. As of June 2010, the information in this published version of the BC Major Projects Inventory is prepared by Rene Corcoran, although it is now owned and published by the Province of British Columbia.

## Sources of MPI Information

Information sources include print and electronic media, developers, architects, general contractors, and government agencies (provincial, regional, municipal) as well as occasional site visits. Projects that are under consideration or proposed to be funded by the Provincial government may be listed where there is public information about such projects. The description may indicate the status of Provincial funding applications, if it is known.

## Project Location

Projects are listed within the eight regions: Vancouver Island/Coast, Mainland/Southwest (Vancouver area), Thompson/Okanagan, Kootenay, Cariboo, North Coast, Nechako, and Northeast. Maps showing the location of the regions and main population centres are included in the MPI. Projects are also listed according to the nearest population centre, which could be an unincorporated centre or a local government, (e.g., a municipality).

## Updates

New projects are added to the database every quarter. Projects already in the database are updated, at minimum, every six months unless there is no expected change in status for a longer period of time. Projects may be shown as updated with no change in information—this means that the information shown is still valid according to the verifying source.

## Estimated Costs

Cost estimates are general estimates from the information sources used.

## Start and Finish Dates

Start and finish dates for proposed projects are based on estimates from the sources used, or in some cases, on reasonable assumptions. These dates are revised as new information becomes available.

## Project Status

Projects are listed by status: proposed, under construction, completed, or on hold. Notes on other status indicators are also included in the project description. Projects that are on hold for longer than two years are normally removed from the publication (although retained in our database). Cancelled projects are noted in the project descriptions as cancelled, then removed from the next issue of the MPI.

## Sustainable Building Design

As a new feature, the MPI has begun identifying sustainable building design and construction projects within that have been registered and certified under a recognized green building rating system (e.g., LEED®, Green Globes). Certification provides greater assurance that a building will be an environmentally responsible, energy efficient, profitable, and healthy place to live, work and play. This designation has been added to the project description to promote awareness of the benefits of green buildings.

## Highlights of the June 2014 Issue

This issue of the BC Major Projects Inventory lists 25 new proposed projects over \$15 million for the second quarter of 2014, with available capital cost estimates totaling approximately \$34.4 billion in potential new capital investment, if all the projects proceed.

Twenty-one major projects started construction in the second quarter, with an estimated value of \$1.7 billion. The largest project started at \$420 million was the Upper Lillooet River Hydroelectric Project in Pemberton, followed by the \$240 million Port Mann Water Supply Tunnel in Vancouver, and the \$200 million Skaha Hills Development in Penticton.

Twenty projects completed construction in the second quarter, with an estimated capital cost of approximately \$2.4 billion; the largest project is the \$746 million Northwest Transmission Line (NTL) in Terrace, followed by the \$575 million Highland Valley Copper Modernization in Logan Lake.

All capital costs are estimates, and therefore, subject to changes, especially in the early stages of a project proposal. Some capital costs are not included because they were not available at press time or the developer/owner requested that no capital cost be shown.

The capital cost of all major projects currently under construction in BC is estimated at \$82.6 billion, down slightly from the \$84.2 billion reported in the first quarter of 2014. Many major project proposals listed are in very preliminary stages and are not approved for construction, therefore capital cost estimates should be viewed with caution. The available capital cost of proposed projects is estimated at approximately \$236.5 billion, up from \$206 billion in the previous quarter. Approximately \$22.8 billion of projects are judged to be 'on hold' for the time being.

#### John Hart Replacement

BC Hydro Ph: (604) 623-4472 Toll Free: 1-866-647-3334  
The purpose of the project is to replace the existing John Hart Generating Station. The existing six unit, 126 MW generating station, located on Vancouver Island near the community of Campbell River, has been in operation since 1947. The age and condition of the John Hart facility indicate the need for significant capital investment in the powerhouse and penstocks to ensure reliable generation from the facility in the long term and to mitigate seismic and environmental risks. The new facility will provide an additional 12 MW capacity (from 126 MW to 138 MW) and approximately 10 per cent additional "resource smart" energy from the same amount of water. BC Hydro applied to the BCUC for a Certificate of Public Necessity and Convenience (CPCN) for this project and this was approved by BCUC in February 2013. InPower BC has been selected to construct the underground powerhouse.

##### Mica Gas SF6 Insulated Switchgear Replacement Project

BC Hydro Ph: (604) 623-4472 Toll Free: 1-866-647-3334  
This project is to replace the existing 500 kV SF6 GIS switchgear system at the Mica Generating Station and install additional SF6 GIS necessary to accommodate the future addition of Mica Units 5 and 6. When completed the system will use three 500 kV circuits to conduct the energy from the Mica underground powerhouse to the surface, where it transitions to transmission system. Replacement of the existing switchgear system will maintain the level of reliability of this key generating station and have the additional benefit of reducing SF6 (a greenhouse gas) leakage. The new switchgear system will also accommodate the future addition of the Mica Units 5 and 6 generators.

Mica Generating Station is BC Hydro's third largest generating facility. Built in the 1970's the plant was built with four large hydroelectric generating units but with bays for two additional 500 MW units. The Mica Units 5 and 6 project involves installation of generating units similar to the four existing units but with more efficient turbines. In addition, there is a transmission requirement for a series capacitor station which would be located near the mid point on the existing Mica-Nicola 500 kV transmission lines.
