**MANAGEMENT PLAN #3 MEMORANDUM**

---

**TO:** INFORMATION PACKAGE REPORT  
**FROM:** DEL WILLIAMS R.P.E.  
**SUBJECT:** WILDLIFE TREE PATCHES  
**DATE:** MARCH 21, 2000  
**CC:**

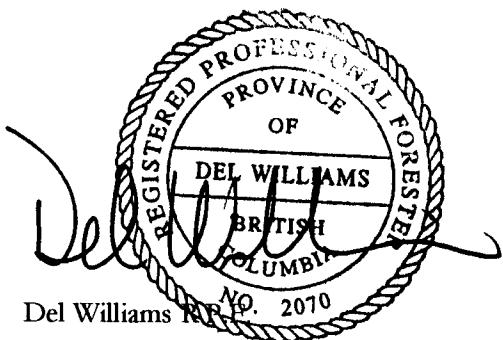

---

An estimate of the amount of wildlife tree patch (WTP) area required is needed for the net down assumptions. There were three steps used to attain this and they are described below:

First, the Mature Forest Retention Areas (MFRA's) were buffered to 250 metres. Areas within the 250-metre buffer were assumed to obtain their WTP requirement from the MFRA's.

Second, the areas outside of the buffers were quantified.

Third, an estimate of the WTP percentage requirement on area outside of the buffers was derived. This proportion was obtained by using the February 2000 amendment to the *Landscape Unit Planning Guide*. The calculations are shown on the attached spreadsheet.

## Wildlife Tree Retention Tables

(Duplicated from February 2000 amendment to *Landscape Unit Planning Guide*)  
For TFL 56 -- March 2000

A	B	C	D	E	F	G		
Landscape Unit	BEC Subzone	Crown Forested (NC+THLB)	THLB	%Subzone Available for Harvest	Total Hectares Logged	% THLB Harvested	%of THLB considered to be harvested without WTP's	Total Wildlife Tree Retention
R12	ICH mw3	2140	2060	96%	664	32%	26%	9%
	ICH wk1	8293	7309	88%	2126	29%	23%	8%
	ICH vk1	10831	7178	66%	1130	16%	13%	5%
	ESSF vc	17615	7360	42%	615	8%	7%	2%
R19	ICH wk1	3151	3148	100%	1967	62%	50%	11%
	ICH vk1	8921	7741	87%	2264	29%	23%	8%
	ESSF vc	8389	3539	42%	477	13%	11%	2%
		59340	38335	65%	9243	24%	19%	6%

Note: 20% is used as the approximate amount of area harvested with WTP patches.

This is calculated as shown below:

New areas harvest under code rules which have WTP's:	920 hectares 10%
--	---------------------

Old areas harvested without official WTP's but with de facto WTP's (This is an estimate based upon a review of orthophotos -- old logging blocks with patches of mature timber left are estimated to represent at least 10% of the pre-code logging blocks)	10%
--	-----

**From:** Cam Brown [cam\_b@silvatech.bc.ca]  
**sent:** Wednesday, February 09, 2000 5:01 PM  
**To:** Del Williams  
**Subject:** Unstable

ESA-TSIL-2000op-forest

ed.xls      Del,

Attached is a spreadsheet with the terrain stability numbers. I think it will fly as is. 45% of the forested TSIL D Unstable area will be out of the landbase (2052 ha). This consists of all of the overlap areas and the remaining TSIL D Unstable areas that fall within designated reserves. Only 104 ha of the 2052 ha will actually have an impact on the final THLB (ESA overlap not in reserves).

The data was summarized based on the forested landbase below operability in order to better reflect the potential impact on the THLB (unstable terrain would not cause non-forested areas to be netted out because they will already be removed).

So that ones done! I will finalize the GIS layer when you give me the ok.  
Cam

**Terrain Stability Landbase Summary**

09-Jan-00

Polygon Group	Within Forested, 1999 Op (ha)	In Reserve (ha)	% in Reserve
Both Unstable and ESA1 Soils	255	152	59%
Only TSIL D Unstable	4354	1796	41%
<b>TOTALS</b>	<b>4609</b>	<b>1948</b>	<b>42%</b>

**Terrain Stability Netdown Summary**

NETDOWN:	ha
TSIL D / ESA Overlap (all)	255
Remaining TSIL D Unstable in Reserve	1796
<b>GROSS NETDOWN AREA</b>	<b>2052</b>
<b>% of all TSIL D area</b>	<b>45%</b>

Previous method of removing only ESA1 soils would have resulted in a gross forested netdown of 1538 ha.

**Netdown Application:**

100% netdown of the forested overlap of ESA1 soils and TSIL D Unstable.

41% netdown of the remaining forested TSIL D Unstable areas.

Total gross netdown of 2052 ha (45%) of forested TSIL D Unstable polygons.

Note: Removing only the forested ESA1 soils polygons would result in a gross netdown of 1538 ha.

## MANAGEMENT PLAN #3 MEMORANDUM

**TO:** INFORMATION PACKAGE REPORT  
**FROM:** DEL WILLIAMS R.P.E.  
**SUBJECT:** UNSALVAGED LOSSES  
**DATE:** MARCH 28, 2000  
**CC:** CAM BROWN, SILVATECH CONSULTING LTD.

An estimate of unsalvaged losses is required in order to net down growth estimates on forest sites in TFL 56. In this memo, losses due to fire, windthrow, and pests are estimated. They are then reduced to account for the portion of the losses that are salvaged. A brief discussion of each loss category, and those potential categories not accounted for here, are presented below.

**Fire:** To calculate fire losses, information regarding wildfires was collected using the Ministry of Forests Protection Branch "Fire reporting system". Data from 1955 to 1999 was available and is summarized in the table below and fully displayed in the attachment. This data includes both wildfires and escaped burns.

**Table 1. Fire losses**

<i>Description</i>	<i>Area, proportion, or volume</i>
Average annual loss on entire forested landbase	55.7 hectares
Proportion of forested landbase that is in THLB	25.6%
Average annual loss on THLB	14.3 hectares
Rate of salvage	80%
Unsalvaged loss due to fire	2.9 hectares (1273 m <sup>3</sup> ) (0.0095% of THLB annually)

The Ministry of Forests data for the TSA suggests a loss of 29.5 hectares over a THLB of 67,667 ha (a loss rate of 0.044%). RCFC's estimated loss is 0.0095%, somewhat lower, reflecting a lower fire rate.

**Windthrow:** Windthrow losses are those losses caused by catastrophic windthrow events – not individual or small groups of trees, but patches or stands. Non-catastrophic events are accounted for through the growth curve formulation. Catastrophic events were "captured" by reviewing recent (1995 to 1999 inclusive) records for windthrow events in the TFL area. Annual overview flights are completed to check for windthrow, pest activities and road problems. Any windthrow events over 1/2 hectare would likely be spotted during these flights and other observations. Data is summarized in the table below and fully displayed in the attachment.

**Table 2. Windthrow**

<i>Description</i>	<i>Area, proportion, or volume</i>
Average annual loss on THLB	852 m <sup>3</sup>
Rate of salvage	84%
Unsalvaged loss due to windthrow	136 m <sup>3</sup>

The above table includes all known windthrown stands within the THLB and the actual harvest salvage rates. The Ministry of Forests, in their recent TSR, found windthrow losses on the TSA to be 341 m<sup>3</sup>. Considering their timber harvesting landbase is over twice as large as the TFL's, the numbers are roughly equivalent.

**Pests:** Pest loss estimates were obtained in the same way that the windthrow estimates were. Records and observations from annual overview flights and general observations were compiled (see attachment). Forest Insect and Disease Survey (FIDS) results were compared with the compilation to ensure that no observations were missed. Harvest data was used to quantify salvage rates.

Significant pest losses were observed for two species of insects – spruce bark beetle and hemlock looper. The hemlock looper historic cycle is longer than the time period surveyed, yet the time period chosen captured one of the epidemic cycles. Therefore, pest losses are likely overestimated slightly. Although many other pests inhabit the area, they are all considered to be at endemic levels and are accounted for in the growth curve compilation.

**Table 3. Pest losses**

<i>Description</i>	<i>Area, proportion, or volume</i>
Average annual loss on THLB	2987 m <sup>3</sup>
Rate of salvage	85.4 %
Unsalvaged loss due to pests	367 m <sup>3</sup>

The Ministry of Forests, in their recent TSR, found pest losses on the TSA to be 660 m<sup>3</sup>. Considering their landbase is over twice as large as the TFL's, the numbers are roughly equivalent.

**Avalanche:** There have been no significant avalanche losses. This is expected as the avalanches are usually confined to existing tracks. RCFC has observed no significant avalanche activity in harvested cutblocks on the TFL.

**Armillaria:** We have assumed losses to Armillaria to be endemic rather than catastrophic. Armillaria is widespread and can be found in a high proportion of TFL 56 stands. Observed mortality has been very light and dispersed. The growth curve data for the TFL captures such losses so no further deductions are needed.

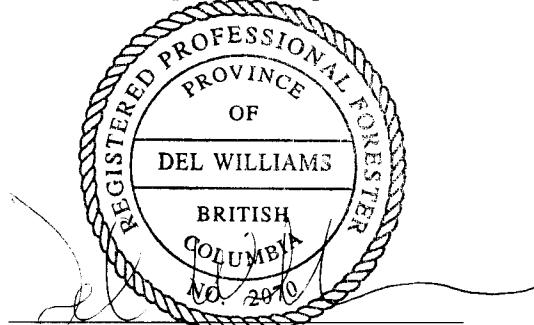

**Summary:**

Losses are summarized in the table below. .

**Table 4. Summary**

<i>Description</i>	<i>Annual unsalvaged volume</i>
Fire losses	1273 m <sup>3</sup>
Windthrow	136 m <sup>3</sup>
Pest	367 m <sup>3</sup>
Other	0 m <sup>3</sup>
<b>Total</b>	<b>1776 m<sup>3</sup></b>

The attached spreadsheets provide a rationale and data for each of the loss categories above.

Del Williams R.P.F.

## **Fire Loss Information**

## Fire Loss Estimate for TFL 56

Information for Table 2 was obtained by querying the provincial forest fire database. The data includes all reported fires between the years 1955 to 1999. The fires are throughout the forested landbase on the TFL, but only those on the THLB will effect timber flows over time. As well, much of the timber is salvaged. A logic for "netting down" losses is presented in Table 1.

**Table 1. Net Down of Fire Losses**

Number of years data exists	44 years	(Includes all years in database)
Number of fires	362 fires	(total fires in TFL 56 area in 1955-1999)
Total hectares burnt	2452.9 hectares	(includes all hectares shown as burnt in database)
Average size	6.8 hectares	
Average hectares per year	55.7 hectares	
Average number of fires per year	8.2 fires/year	
Total forest landbase	119748 hectares	(This is the total forested landbase in TFL 56)
Timber harvesting landbase (THLB)	30654 hectares	(This is the portion of the forested landbase that we will extract timber from)
% of forest landbase that is in THLB	25.6%	
Annual area of fires in THLB	14.3 hectares	(Since much of the forested area is outside of the THLB, not all fires should be counted towards unsalvaged losses -- only those that occur in the THLB should. I have assumed that the fires occur proportionately over the forested landscape and that we can simply count 25.6% of the burn area>)
Proportion of fire area salvaged	80.0%	(Most burnt areas in the TFL are salvaged)
Annual fire loss from THLB	2.9 hectares	(Unsalvaged burnt areas in the THLB that will be deducted.)

**Table 2. TFL 56 Fire Statistics**

## **Windthrow Loss Information**

Windthrow Estimate for TFL 56

**Includes all known catastrophic windthrow occurring between 1995 and 1999 inclusive.**

Location	Name	Volume Damage or Destroyed					Net Loss (total m3)	Information source
		Area (ha)	Gross Merch (m3/ha)	% Destroyed	Gross Loss (total m3)	% salvaged		
<b>1995</b>	No known windthrow loss in 1995						0	
<b>1996</b>	Sorcerer Creek	82M060-672	0.5	380	75%	143	0%	143
							0	Walk-thru assessment
<b>1997</b>	Sorcerer Creek	CP172-1	10.8	294	5%	159	80%	32
	Sorcerer Creek	CP172-6	2.0	350	100%	700	90%	SP amendment for CP 172-1, and original SP
	Sorcerer Creek	CP160-A	1.0	350	30%	105	0%	SP
	Pass Creek	CP134-3	2.7	315	100%	851	90%	Walk-thru assessment
	Pass Creek	CP134-2	4.1	315	100%	1292	90%	SP amendment and original SP
	Goldstream	CP350-1	7.7	443	20%	682	95%	SP amendment and original SP
	North Downie	CP152-1	4.5	366	20%	329	75%	SP amendment and original SP
<b>1998</b>	No known windthrow loss in 1998						0	

<b>1999</b>	<b>No known windthrow loss in 1999</b>	<b>Total windthrow loss for 1995 to 1999 inclusive</b>	<b>Average annual loss</b>	<b>84% salvage rate</b>

Windthrow observations are made annually through TFL overview flights and more frequently through observations made by RCFC field staff during the course of other duties. All observed patches of windthrow are noted and reviewed for salvage opportunities. All noted patches for the 1995 - 1999 period are listed above. It is unlikely any patches greater than 0.5 hectares in the operable landbase would escape detection.

## **Pest Loss Information**

## Pest Loss Estimate for TFL 56

Includes all known catastrophic pest loss occurring between 1994 and 1999 inclusive.

Location	Name	Opening # or CP	Volume Damage or Destroyed				Information source
			Gross Merch (m3/ha)	% Destroyed	Gross Loss (total m3)	% salvaged	
<b>1993</b>	No Known losses in 1993						0
<b>1994</b>	CP230-1	31.5	400	30%	3780	90%	Hw Looper SP's
	CP240-1	1.4	400	25%	140	0%	Hw Looper SP's
	CP240-2	3.9	400	25%	390	0%	Hw Looper SP's
	82M048-91	8.3	300	20%	498	0%	Inventory
	82M59-388	1.4	457	20%	128	0%	Inventory
	82M59-386	6.0	474	15%	427	0%	Inventory
	CP150-1	39.7	420	42%	7003	95%	Spruce bark beetle SP's
	CP150-6	24.5	384	55%	5174	95%	Spruce bark beetle SP's
<b>1995</b>	No Known losses in 1995					0	
<b>1996</b>	No Known losses in 1996					0	
<b>1997</b>	No Known losses in 1997					0	
<b>1998</b>	No Known losses in 1998					0	
<b>1999</b>	No Known losses in 1999					0	
	Total loss for 1993 to 1999 inclusive				17540	2569	
	Average annual loss				2506	367	85.4% Salvage rate

Forest health observations are made annually through TFL overview flights and more frequently through observations made by RCFC field staff during the course of other duties. All observed pest incidences are noted and reviewed for salvage or treatment opportunities. All noted patches for the 1993 - 1999 period are listed above. It is unlikely any patches greater than 2 hectares in the operable landbase would escape detection.

As can be seen in the table above, average annual losses are 2506m3 of which 85% is salvaged. Average annual unsalvaged loss is 367m3.

---

## MANAGEMENT PLAN #3 MEMORANDUM

---

**TO:** INFORMATION PACKAGE REPORT  
**FROM:** DEL WILLIAMS R.P.F.  
**SUBJECT:** REVISED UNSALVAGED FIRE LOSSES  
**DATE:** MONDAY, JULY 10, 2000  
**CC:** CAM BROWN, SILVATECH CONSULTING LTD.

---

An estimate of unsalvaged losses is required in order to net down growth estimates on forest sites in TFL 56. This memo is an addendum to the memo dated March 28, 2000 in which all unsalvaged losses are quantified.

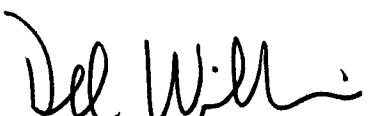

In this memo, losses due to fire are estimated – these are modified from our original estimate based on feedback received in the review of our draft Information Package. The original estimate included all fire statistics to 1955. In reality, fire losses are much different today than in the early years of the statistical records. Road access has improved and fire control is both more prompt and more efficient leading to fewer losses. Only the last two decades are used in the calculations below.

**Fire:** To calculate fire losses, information regarding wildfires was collected using the Ministry of Forests Protection Branch “Fire reporting system”. Data from 1955 to 1999 was available, the last 20 years is summarized in the table below and fully displayed in the attachment. This data includes both wildfires and escaped burns. Only the last 20 years is used because it best represents our level of fire suppression success.

Table 1. Fire losses

Description	Area, proportion, or volume
Average annual loss on entire forested landbase	7.8 hectares
Proportion of forested landbase that is in THLB	25.6%
Average annual loss on THLB	4.6 hectares
Rate of salvage	80%
Unsalvaged loss due to fire	0.9 hectares (452 m <sup>3</sup> ) (0.0003% of THLB annually)

The Ministry of Forests data for the TSA suggests a loss of 29.5 hectares over a THLB of 67,667 ha (a loss rate of 0.044%). RCFC's estimated loss is 0.0003%, somewhat lower, reflecting the lower fire rate in our climatically wetter portion of the district and our more developed network of roads (for salvage and control).

Del Williams R.P.F.

## Fire Loss Estimate for TFL 56 (20 year)

Information for Table 2 was obtained by querying the provincial forest fire database. The data includes all reported fires between the years 1955 to 1999. The fires are throughout the forested landbase on the TFL, but only those on the THLB will effect timber flows over time. As well, much of the timber is salvaged. A logic for "netting down" losses is presented in Table 1.

**Table 1. Net Down of Fire Losses**

Number of years	20 years	(includes 20 years in database)
Number of fires	206 fires	(total fires in TFL 56 area in 1979-1999)
Total hectares burnt	30654 hectares	(includes all hectares burnt as shown in database)
Average size	1.7 hectares	
Average hectares per year	1.5 hectares	
Average number of fires per year	10.3 fires/year	
Total forest landbase	7748 hectares	(This is the total forest landbase in the TFL 56 area)
Timber harvesting landbase (THLB)	30654 hectares	(This is the portion of the forested landbase that we will extract timber from)
% of forest landbase located in THLB	39.5%	
Annual area of fires in THLB	4.6 hectares	(Since much of the forested area is outside of the THLB, not all fires should be counted towards unsalvaged losses – only those that occur in the THLB should.)
Proportion of fire area salvaged	80.0%	(Most burnt areas in the TFL are salvaged)
Annual fire loss from THLB	0.9 hectares	(Unsalvaged burnt areas in the THLB that will be deducted.)

**Table 2. TFL 56 Fire Statistics (1979-1999)**

Fire ID	Zone	FireID	TimeStamp	Latitude	Longitude	Area	Current	Cause Specific	Responsible Group	Tenure
