Challenge Twelve

What does Skylar need to do to secure his home network?

I'd better secure my Wi-Fi so I don't have to fight intruders trying to get to my personal information!

Answers:
A. Change Default Settings
B. Improve his Security
C. All of the above

Change your Default Settings
> Re-name your Home Network
> Change your default IP Address
> Change the default Router Password
> Change your Administrator Password

Improve your Security:
> Activate Network Encryption (WPA2)
> Install software updates promptly
> Consider getting a 'hardware' firewall
> Raise security on connected devices

Also Attempt to locate your Wi-Fi in the middle of the house to prevent outside intruders!
