

C

BLANK WORKSHEETS

The table below lists which worksheets are used for sprinkler systems and which ones are for trickle systems. The blank versions of these worksheets are provided in this appendix.

Worksheet	Sprinkler	Trickle	Example
1(a) Information from Farm Plan – Sprinkler	✓		Page 16
1(b) Information from Farm Plan – Trickle		✓	Page 19
2(a) Irrigation System Audit – Sprinkler	✓		Page 22
2(b) Irrigation System Audit – Trickle		✓	Page 22
3(a) Total Irrigated Area Using System Information	✓		Page 26
3(b) Total Irrigated Area Using Field Dimension	✓	✓	Page 27
4(a) Irrigation System Peak Flow Rate Check – Sprinkler	✓		Page 31
4(b) Irrigation System Peak Flow Rate Check – Trickle		✓	Page 32
5(a) Annual Water Use Check – Sprinkler	✓		Page 39
5(b) Annual Water Use Check – Trickle		✓	Page 41
6 Water Diversion and Conveyance Loss Checks	✓	✓	Page 47
7 Intake Screen Area Check	✓	✓	Page 52
8 Irrigation Water Quality Check	✓	✓	Page 56
9 Irrigation System Uniformity Check	✓	✓	Page 60
10 Sprinkler Irrigation Scheduling Using Water Budget Method	✓		Page 73
11 Trickle Irrigation Scheduling Using Plant Water Requirement Method		✓	Page 75
12 Trickle Irrigation Scheduling Using Water Budget Method		✓	Page 76

Worksheet 1(a) Information from Farm Plan – SPRINKLER

INFORMATION	Value and Box No.	Unit	Source
Worksheet 3(a) Total Irrigated Area Using System Information			
Irrigation interval per pass	<input type="text"/> 1	days/pass	Farm info
Irrigation sets per day	<input type="text"/> 2	sets	Farm info
Sprinkler spacing	<input type="text"/> 3	ft	Farm info
Number of sprinklers	<input type="text"/> 4	sprinklers	Farm info
Distance moved per set	<input type="text"/> 5	ft	Farm info
Worksheet 3(b) Total Irrigated Area Using Field Dimension			
Field width	<input type="text"/> 1	ft	Farm info
Field length	<input type="text"/> 2	ft	Farm info
Worksheet 4(a) Irrigation System Peak Flow Rate Check			
<u>Calculated Irrigation System Peak Flow Rate</u>			
Peak flow rate on water licence or provided by irrigation district or water purveyor	<input type="text"/> 2	US gpm	Water licence or purveyor
Peak evapotranspiration (ET) in <input type="text"/>	<input type="text"/> -	in/d	Table 2.1
Estimated peak flow rate requirement per acre	<input type="text"/> 3	US gpm/acre	Table 2.2 or 2.3
<u>Actual Irrigation System Flow Rate</u>			
Flow rate metered or provided by district	<input type="text"/> 5	US gpm	Meter or district
<u>Pump Specifications:</u>			
Model number	<input type="text"/> -		Field check
Impellor size	<input type="text"/> -	in Dia.	Pump name plate
Revolution per minute (rpm)	<input type="text"/> -	rpm	Pump curve
Flow rate	<input type="text"/> 6	US gpm	
<u>Nozzle Specifications:</u>			
Size	<input type="text"/> -	in x in	Field check
Operating pressure	<input type="text"/> -	psi	Field check
Flow rate	<input type="text"/> 7	US gpm	Farm plan
Number of nozzles	<input type="text"/> 8	nozzles	Farm plan
Worksheet 5(a) Annual Water Use Check			
<u>Calculated Annual Water Use Requirement</u>			
Annual water withdrawal stated on water licence	<input type="text"/> 2	ac-ft	Water licence
Estimated annual crop water requirement	<input type="text"/> 3	in	Table 2.4
Application efficiency of irrigation system	<input type="text"/> 4	%	Table 3.2
<u>Meter Information</u>			
Meter reading at start of year	<input type="text"/> 6	US gal	Water purveyor
Meter reading at end of year	<input type="text"/> 7	US gal	

Pump Specifications

Pump horsepower	<input type="text"/>	9	hp	Pump name plate
Energy consumption for entire year	<input type="text"/>	10	KWh	Hydro bill
Refer to Worksheet 4(a) for the rest of the information regarding pump				

Irrigation Specifications

Irrigation interval	<input type="text"/>	16	days	Farm plan
Number of irrigations per year	<input type="text"/>	17		Farm plan

Worksheet 6 Water Diversion and Conveyance Loss Checks

Conveyance channel flow rate at/near diversion	<input type="text"/>	1	US gpm	Site
Overflow in channel	<input type="text"/>	2	US gpm	Site
Number of operating days per season	<input type="text"/>	3	days	Site
Amount of water licensed	<input type="text"/>	4	ac-ft	Water licence
Conveyance channel flow rate at/near intake	<input type="text"/>	5	US gpm	Site

Worksheet 7 Intake Screen Area Check

Screen mesh size	<input type="text"/>	2	mesh	Site
Percent open area of mesh size	<input type="text"/>	3	%	Table 3.4

For flat screen.

Number of screened surfaces	<input type="text"/>	5	ft	Site
Length of screen	<input type="text"/>	6	ft	Site
Width of screen	<input type="text"/>	7	ft	Site

For cylindrical screen.

Diameter of screen	<input type="text"/>	9	ft	Site
Length of screen	<input type="text"/>	10	ft	Site

Worksheet 8 Irrigation Water Quality Check

Sodium adsorption ratio (SAR)	<input type="text"/>	1		Laboratory
Electrical conductivity (EC) of water	<input type="text"/>	3	dS/m	Table 3.5
E. coli count	<input type="text"/>	5	cfu/100 ml	Laboratory
Fecal coliform count	<input type="text"/>	6	cfu/100 ml	Laboratory

Worksheet 1(b) Information from Farm Plan – TRICKLE

INFORMATION	Value and Box No.	Unit	Source
Worksheet 3(b) Total Irrigated Area			
Field width	<input type="text"/> 1	ft	Farm info.
Field length	<input type="text"/> 2	ft	Farm info.
Worksheet 4(b) Irrigation System Peak Flow Rate Check			
<u>Calculated Irrigation System Peak Flow Rate</u>			
Peak flow rate on water licence or provided by irrigation district or water purveyor	<input type="text"/> 2	US gpm	Water licence or purveyor
Peak evapotranspiration (ET) in <input type="text"/>	<input type="text"/> -	in/d	Table 2.1
Estimated peak flow rate requirement per acre	<input type="text"/> 3	US gpm/acre	Table 2.2 or 2.3
<u>Actual Irrigation System Flow Rate</u>			
Flow rate metered or provided by district	<input type="text"/> 5	US gpm	Meter or district
<u>Pump Specifications:</u>			
Model number	<input type="text"/> -		Field check
Impellor size	<input type="text"/> -		Pump name plate
Revolution per minute (rpm)	<input type="text"/> -	rpm	
Flow rate	<input type="text"/> 6	US gpm	Pump curve
<u>Emitter Specifications:</u>			
Size	<input type="text"/> -	in I.D.	Field check
Operating pressure	<input type="text"/> -	psi	Field check
Flow rate (zone 4)	<input type="text"/> 7	gph	Farm plan
Number of emitters (zone 4)	<input type="text"/> 8	emitters	Farm plan
Worksheet 5(b) Annual Water Use Check			
<u>Calculated Annual Water Use Requirement</u>			
Water withdrawal amount on water licence	<input type="text"/> 2	ac-ft	Water licence
Estimated annual crop water requirement	<input type="text"/> 3	in	Table 2.4
Crop adjustment factor	<input type="text"/> 4		Table 3.3
Application efficiency of irrigation system	<input type="text"/> 5	%	Table 3.2
<u>Meter Information</u>			
Meter reading at start of year	<input type="text"/> 6	US gal	Water purveyor
Meter reading at end of year	<input type="text"/> 7	US gal	
<u>Pump Specifications</u>			
Pump horsepower	<input type="text"/> 10	hp	Pump name plate
Energy consumption for entire year	<input type="text"/> 11	KWh	Hydro bill
Refer to Worksheet 4(b) for the rest of the information regarding pump			

Irrigation Specifications (based on emitter specifications)

Number of zones	<input type="text"/>	17	zones	Farm plan
Operating hours per zone per day	<input type="text"/>	18	hr/zone/d	Farm plan
Number of operating days per year	<input type="text"/>	19	days	Farm plan

Worksheet 6 Water Diversion and Conveyance Loss Checks

Conveyance channel flow rate at/near diversion	<input type="text"/>	1	US gpm	Site
Overflow in channel	<input type="text"/>	2	US gpm	Site
Number of operating days per season	<input type="text"/>	3	days	Site
Amount of water licensed	<input type="text"/>	4	ac-ft	Water licence
Conveyance channel flow rate at/near intake	<input type="text"/>	5	US gpm	Site

Worksheet 7 Intake Screen Area Check

Screen mesh size	<input type="text"/>	2	mesh	Site
Percent open area of mesh size	<input type="text"/>	3	%	Table 3.4

For flat screen.

Number of screened surfaces	<input type="text"/>	5	ft	Site
Length of screen	<input type="text"/>	6	ft	Site
Width of screen	<input type="text"/>	7	ft	Site

For cylindrical screen.

Diameter of screen	<input type="text"/>	9	ft	Site
Length of screen	<input type="text"/>	10	ft	Site

Worksheet 8 Irrigation Water Quality Check

Adjusted sodium adsorption ratio (SAR _{adj})	<input type="text"/>	2		Laboratory
Electrical conductivity (EC) of water	<input type="text"/>	3	dS/m	Table 3.5
E. coli count	<input type="text"/>	5	cfu/100 ml	Laboratory
Fecal coliform count	<input type="text"/>	6	cfu/100 ml	Laboratory

Worksheet 2(a) Irrigation System Audit – *SPRINKLER*

Checklist:

	Yes	No
1. Are all sprinklers of the same model?	<input type="checkbox"/>	<input type="checkbox"/>
2. Are all nozzles of the same size?	<input type="checkbox"/>	<input type="checkbox"/>
3. Are all sprinkler and lateral spacing uniform (50 – 60% wetted diameter)?	<input type="checkbox"/>	<input type="checkbox"/>
4. Is the operating pressure in the best range?	<input type="checkbox"/>	<input type="checkbox"/>
5. Is pressure differential minimal?	<input type="checkbox"/>	<input type="checkbox"/>

Answer:

Do the system conditions meet all the minimum standards?

☐ **Yes** - OK
☐ **No** - See action items.

Worksheet 2(b) Irrigation System Audit – *TRICKLE*

Checklist:

	Yes	No
For each zone,		
1. Are all emitters of the same model throughout the zone?	<input type="checkbox"/>	<input type="checkbox"/>
2. Are all emitters of the same size throughout the zone?	<input type="checkbox"/>	<input type="checkbox"/>
3. Are all emitter spacing uniform throughout the zone?	<input type="checkbox"/>	<input type="checkbox"/>
4. Is pressure differential minimal?	<input type="checkbox"/>	<input type="checkbox"/>
5. Is the same crop or same plant size grown in the zone?	<input type="checkbox"/>	<input type="checkbox"/>
6. Is the soil type uniform throughout the zone?	<input type="checkbox"/>	<input type="checkbox"/>

Answer:

Do the system conditions meet all the minimum standards?

☐ **Yes** - OK
☐ **No** - See action items.

Worksheet 3(a) Total Irrigated Area Using System Information

Information:

Irrigation interval per pass	<input type="text" value="1"/>	days/pass
Irrigation sets per day	<input type="text" value="2"/>	sets
Sprinkler spacing	<input type="text" value="3"/>	ft
Number of sprinklers	<input type="text" value="4"/>	sprinklers
Distance moved per set	<input type="text" value="5"/>	ft

Calculation:

Step 1. Calculate the number of sets per pass

$$\begin{aligned}
 \text{No. of Sets per Pass} &= \text{Irrigation Interval per pass} \times \text{Irrigation Sets per Day} \\
 &= \text{1} \text{ days} \times \text{2} \\
 &= \text{6} \text{ sets}
 \end{aligned}$$

Step 2. Calculate the field width

$$\begin{aligned}
 \text{Field Width} &= \text{Sprinkler Spacing} \times \text{No. of Sprinklers} \\
 &= \text{3} \text{ ft} \times \text{6} \\
 &= \text{7} \text{ ft}
 \end{aligned}$$

Step 3. Calculate the field length

$$\begin{aligned}
 \text{Field Length} &= \text{Distance Moved per Set} \times \text{No. of Sets} \\
 &= \text{5} \text{ ft} \times \text{6} \\
 &= \text{8} \text{ ft}
 \end{aligned}$$

Step 4. Determine the field area

Equation 3.1(a)

$$\begin{aligned}
 \text{Total Irrigated Area} &= \frac{\text{Field Width} \times \text{Field Length}}{43,560} \\
 &= \frac{\text{7} \text{ ft} \times \text{8} \text{ ft}}{43,560} \\
 &= \text{9} \text{ acres}
 \end{aligned}$$

Repeat the same step for irregular shaped field.

Answer:

$$\begin{aligned}
 \text{Total Irrigated Area} &= \text{Sum of All Field Areas} \\
 &= (\text{9} + \text{9} + \text{9}) \text{ acres} \\
 &= \text{10} \text{ acres}
 \end{aligned}$$

Worksheet 3(b) Total Irrigated Area Using Field Dimension

(can be used for both sprinkler and trickle systems)

Information:

Field width ft
Field length ft

Calculation:

Determine the field area

Equation 3.1(a)

$$\text{Total Irrigated Area} = \frac{\text{Field Width x Field Length}}{43,560}$$

$$= \frac{\text{1 ft x 2 ft}}{43,560}$$

$$= \text{3 acres}$$

Repeat the same step for irregular shaped field

Answer:

$$\begin{aligned} \text{Total Irrigated Area} &= \text{Sum of All Field Areas} \\ &= (\text{3} + \text{3} + \text{3}) \text{ acres} \\ &= \text{4} \text{ acres} \end{aligned}$$

Worksheet 4(a) System Peak Flow Rate Check - *SPRINKLER*

Information:

Irrigated area (Box 10 of Worksheet 3(a)) **1** acres
EITHER peak flow rate on water licence (if stated) **2** US gpm
OR peak flow rate requirement per acre (Table 2.3) **3** US gpm/acre

Calculation:

Step 1. Determine calculated peak flow rate.

Equation 3.2

$$\begin{aligned} \text{Calculated Peak Flow Rate} &= \text{Estimated Peak Flow Rate Requirement per Acre} \times \text{Irrigated Area} \\ &= \text{3} \text{ US gpm/acre} \times \text{1} \text{ acres} \\ &= \text{4} \text{ US gpm} \end{aligned}$$

Step 2. Determine actual irrigation system flow rate using one or more of the following methods:

Method 1. Water purveyor restriction or measured flow rate using a meter

Flow rate measured using a meter or provided by district **5** US gpm

Method 2. Pump peak flow rate

Irrigation pump peak flow from pump curve **6** US gpm

Method 3. Determine flow rate using sprinkler nozzles

Nozzle flow rate from supplier's tables **7** US gpm
 No. of nozzles **8** nozzles

Equation 3.3

$$\begin{aligned} \text{Sprinkler System Output Flow Rate} &= \text{Nozzle Flow Rate} \times \text{No. of Nozzles} \\ &= \text{7} \text{ US gpm} \times \text{8} \text{ nozzles} \\ &= \text{9} \text{ US gpm} \end{aligned}$$

Note: Either one of the two values (850 US gpm pump flow rate or 856 US gpm sprinkler flow rate) can be used. In this case, the higher one is used.

Answer:

Step 3. Calculate percent difference of peak flow rate.

Equation 3.5

$$\begin{aligned} \text{Percent Difference} &= \frac{\text{Irrigation System Flow Rate}}{\text{Calculated Peak Flow Rate}} \times 100\% \\ &= \frac{\text{Maximum of 5, 6 or 9} \text{ US gpm}}{\text{2 or 4} \text{ US gpm}} \times 100\% \\ &= \text{10} \% \end{aligned}$$

Is **10** % less than or equal to 100%

Yes Flow rate is not exceeded

No Refer to action items

Worksheet 4(b) System Peak Flow Rate Check - *TRICKLE*

Information:

Irrigated area (Box 10 of Worksheet 3(b)) **1** acres
EITHER peak flow rate on water licence (if stated) **2** US gpm
OR peak flow rate requirement per acre (Table 2.3) **3** US gpm/acre

Calculation:

Step 1. Determine calculated peak flow rate.

Equation 3.2

$$\begin{aligned} \text{Calculated Peak Flow Rate} &= \text{Estimated Peak Flow Rate Requirement per Acre} \times \text{Irrigated Area} \\ &= \text{ **3** US gpm/acre } \times \text{ **1** acres } \\ &= \text{ **4** US gpm } \end{aligned}$$

Step 2. Determine actual irrigation system flow rate using one or more of the following methods:

Method 1. Water purveyor restriction or measured flow rate using a meter

Flow rate measured using a meter or provided by district **5** US gpm

Method 2. Pump peak flow rate

Irrigation pump peak flow from pump curve **6** US gpm

Method 3. Determine flow rate using trickle emitters

Emitter flow rate from supplier's tables **7** gph
 Number of emitters operating at one time **8** emitters

Equation 3.4

$$\begin{aligned} \text{Trickle System Output Flow Rate} &= \text{Emitter Flow Rate} \times \text{No. of Emitters} \times 0.0167 \\ &= \text{ **7** gph } \times \text{ **8** emitters } \times 0.0167 \\ &= \text{ **9** US gpm } \end{aligned}$$

Answer:

Step 3. Calculate percent difference of peak flow rate.

Equation 3.5

$$\begin{aligned} \text{Percent Difference} &= \frac{\text{Irrigation System Flow Rate}}{\text{Calculated Peak Flow Rate}} \times 100\% \\ &= \frac{\text{ **Maximum of 5, 6 or 9** US gpm }}{\text{ **2 or 4** US gpm }} \times 100\% \\ &= \text{ **10** \% } \end{aligned}$$

Is **10** % less than or equal to 100%

Yes Flow rate is not exceeded
 No Refer to action items

Worksheet 5(a) Annual Water Use Check - *SPRINKLER*

Information:

Irrigated area (Box 10 of Worksheet 3)	<input type="text"/>	1	acres
Water withdrawal amount on water licence (if applicable)	<input type="text"/>	2	ac-ft
Estimated annual crop water requirement from Table 2.4	<input type="text"/>	3	in
Application efficiency from Table 3.2	<input type="text"/>	4	%

Calculation:

Step 1. Determine calculated annual water requirement.

Equation 3.6

$$\text{Calculated Annual Water Requirement} = \frac{\text{Estimated Annual Crop Water Requirement}}{\text{Application Efficiency}} \times 100\%$$

$$= \frac{\text{in } \boxed{3}}{\text{in } \boxed{4} \%} \times 100\%$$

$$= \boxed{5} \text{ in}$$

Step 2. Determine actual annual water use using one or more of the following methods:

Method 1. Metered water use

Meter reading at start of year	<input type="text"/>	6	US gal
Meter reading at end of year	<input type="text"/>	7	US gal

Equation 3.8

$$\text{Annual Water Use} = \frac{\text{Meter Reading at End of Year} - \text{Meter Reading at Start of Year}}{27027 \times \text{Irrigated Area}}$$

$$= \frac{\text{US gal } \boxed{7} - \text{US gal } \boxed{6}}{27027 \times \boxed{1} \text{ acres}}$$

$$= \boxed{8} \text{ in}$$

Method 2. Pump water use

Pump horsepower from supplier's table	<input type="text"/>	9	hp
Energy consumption for entire year from hydro bill	<input type="text"/>	10	KWh
Pump flow rate from pump curve	<input type="text"/>	11	US gpm

Equation 3.9(a)

$$\text{Pump Power} = \text{Pump Horsepower} \times 0.746 \text{ KW/hp}$$

$$= \boxed{9} \text{ hp} \times 0.746 \text{ KW/hp}$$

$$= \boxed{12} \text{ KW}$$

Equation 3.9(b)

$$\text{Pump Operating Hours} = \frac{\text{KWh for Entire Year}}{\text{Pump Power}}$$

$$= \frac{\text{KWh } \boxed{10}}{\text{KW } \boxed{12}}$$

$$= \boxed{13} \text{ hr}$$

Equation 3.9(c)

$$\begin{aligned} \text{Annual Water Use} &= \frac{\text{Pump Operating Hours} \times \text{Pump Flow Rate} \times 0.0022}{\text{Irrigated Area}} \\ &= \frac{13 \text{ hr} \times 11 \text{ US gpm} \times 0.0022}{1 \text{ acres}} \\ &= 14 \text{ in} \end{aligned}$$

Method 3. Sprinkler system annual water use

Sprinkler system output flow rate from Box 5, 6 or 9 of Worksheet 4(a) US gpm
 Irrigation interval days
 Number of irrigations per year

Equation 3.10

$$\begin{aligned} \text{Annual Water Use} &= \frac{\text{System Flow Rate} \times \text{Irrigation Interval} \times \text{No. of Irrigations} \times 0.053}{\text{Irrigated Area}} \\ &= \frac{15 \text{ US gpm} \times 16 \text{ days} \times 17 \times 0.053}{1 \text{ acres}} \\ &= 18 \text{ in} \end{aligned}$$

Answer:

If there is a water licence, go to Step 3(a), and do Step 3(b) to double-check.
 If groundwater is used or water is supplied by a purveyor (no water licence), follow Step 3(b) only.

Step 3(a). Calculate the annual water use and compare it with the water licence withdrawal.

Equation 3.12

$$\begin{aligned} \text{Annual Water Use [ac-ft]} &= \frac{\text{Annual Water Use [in]} \times \text{Irrigated Area [acres]}}{12 \text{ [in/ft]}} \\ &= \frac{8, 14 \text{ or } 18 \text{ in} \times 1 \text{ acres}}{12 \text{ in/ft}} \\ &= 19 \text{ ac-ft} \end{aligned}$$

Is ac-ft less than ac-ft?

Water withdrawal not exceeded

Refer to Section 3.5

Step 3(b). Calculate percent difference of annual water use. Use the metered water use if available because it is the most accurate method.

Equation 3.5

$$\begin{aligned} \text{Percent Difference} &= \frac{\text{Actual Annual Water Use}}{\text{Calculated Annual Water Requirement}} \times 100\% \\ &= \frac{8, 14 \text{ or } 18 \text{ in}}{5 \text{ in}} \times 100\% \\ &= 10\% \end{aligned}$$

Is % less than 110% annual water use not exceeded by more than 10%

Refer to action items

Worksheet 5(b) Annual Water Use Check - TRICKLE

Information:

Irrigated area (Box 10 of Worksheet 3(b))	<input type="text"/>	1	acres
Water withdrawal amount on water licence (if applicable)	<input type="text"/>	2	ac-ft
Estimated annual crop water requirement from Table 2.4	<input type="text"/>	3	in
Crop adjustment factor from Table 3.3	<input type="text"/>	4	
Application efficiency from Table 3.2	<input type="text"/>	5	%

Calculation:

Step 1. Determine calculated annual water requirement.

Equation 3.7

$$\begin{aligned}
 \text{Calculated Annual Water Requirement} &= \frac{\text{Estimated Annual Crop Water Requirement} \times \text{Crop Adjustment Factor}}{\text{Application Efficiency}} \times 100\% \\
 &= \frac{\text{in} \times \text{in}}{\%} \times 100\% \\
 &= \text{in}
 \end{aligned}$$

Step 2. Determine actual annual water use using one or more of the following methods:

Method 1. Metered water use

Meter reading at start of year	<input type="text"/>	7	US gal
Meter reading at end of year	<input type="text"/>	8	US gal

Equation 3.8

$$\begin{aligned}
 \text{Annual Water Use} &= \frac{\text{Meter Reading at End of Year} - \text{Meter Reading at Start of Year}}{27027 \times \text{Irrigated Area}} \\
 &= \frac{\text{US gal} - \text{US gal}}{27027 \times \text{acres}} \\
 &= \text{in}
 \end{aligned}$$

Method 2. Pump water use

Pump horsepower from supplier's table	<input type="text"/>	10	hp
Energy consumption for entire year from hydro bill	<input type="text"/>	11	KWh
Pump flow rate from pump curve	<input type="text"/>	12	US gpm

Equation 3.9(a)

$$\begin{aligned}
 \text{Pump Power} &= \text{Pump Horsepower} \times 0.746 \text{ KW/hp} \\
 &= \text{hp} \times 0.746 \text{ KW/hp} \\
 &= \text{KW}
 \end{aligned}$$

Equation 3.9(b)

$$\begin{aligned}
 \text{Pump Operating Hours} &= \frac{\text{KWh for Entire Year}}{\text{Pump Power}} \\
 &= \frac{\text{KWh}}{\text{KW}} \\
 &= \text{hr}
 \end{aligned}$$

Equation 3.9(c)

$$\begin{aligned}
 \text{Annual Water Use} &= \frac{\text{Pump Operating Hours} \times \text{Pump Flow Rate} \times 0.0022}{\text{Irrigated Area}} \\
 &= \frac{14 \text{ hr} \times 12 \text{ US gpm} \times 0.0022}{1 \text{ acres}} \\
 &= 15 \text{ in}
 \end{aligned}$$

Method 3. Sprinkler system annual water use

Trickle system output flow rate from Box 5, 6 or 9 of Worksheet 4(b) US gpm
 Number of zones zones
 Operating hours per zone per day hr/zone/d
 Number of operating days per year d

Equation 3.11(a)

$$\begin{aligned}
 \text{Annual Water Use} &= \frac{\text{Zone Flow Rate} \times \text{No. of Zones} \times \text{Operating Hours} \times \text{No. of Days} \times 0.0022}{\text{Irrigated Area}} \\
 &= \frac{16 \text{ US gpm} \times 17 \text{ zones} \times 18 \text{ hr/zone/d} \times 19 \text{ d} \times 0.0022}{1 \text{ acres}} \\
 &= 20 \text{ in}
 \end{aligned}$$

Answer:

If there is a water licence, go to Step 3(a), and do Step 3(b) to double-check.
 If groundwater is used or water is supplied by a purveyor (no water licence), follow Step 3(b) only.

Step 3(a). Calculate the annual water use and compare it with the water licence withdrawal.

Equation 3.12

$$\begin{aligned}
 \text{Annual Water Use [ac-ft]} &= \frac{\text{Annual Water Use [in]} \times \text{Irrigated Area [acres]}}{12 \text{ [in/ft]}} \\
 &= \frac{19 \text{ in} \times 1 \text{ acres}}{12 \text{ in/ft}} \\
 &= 1.58 \text{ ac-ft}
 \end{aligned}$$

Is ac-ft less than ac-ft?
 Yes Water withdrawal not exceeded
 No Refer to Section 3.5

Step 3(b). Calculate percent difference of annual water use. Use the metered water use if available because it is the most accurate method.

Equation 3.5

Percent Difference = $\frac{\text{Actual Annual Water Use}}{\text{Calculated Annual Water Requirement}} \times 100\%$

= $\frac{\text{9, 15 or 20}}{\text{6}}$ in x 100%
= 21 %

Is 21 % less than 110% ☒ **Yes** annual water use not exceeded by more than 10%

☐ **No** Refer to action items

Worksheet 6 Water Diversion and Conveyance Loss Check

(can be used for both sprinkler and trickle systems)

Question: A farmer in Williams Lake has a water licence which allows a water withdrawal of 300 acre-feet from a stream. A diversion channel of 2 km delivers water from the creek to the irrigation system intake. The channel flow rate at the diversion is 1,000 US gpm, and near the intake is 820 US gpm. The overflow channel flow rate is 50 US gpm. The irrigation system operates for 80 days per season. Is the amount of water diverted within the licensed water amount? Are the conveyance losses acceptable?

Information:

Conveyance channel flow rate at point of stream diversion	<input type="text" value="1"/>	US gpm
Overflow in channel	<input type="text" value="2"/>	US gpm
Number of operating days per season	<input type="text" value="3"/>	days
Amount of water licensed	<input type="text" value="4"/>	ac-ft
Conveyance channel flow rate near intake	<input type="text" value="5"/>	US gpm

Water Diversion Check

Calculation:

Step 1. Determine Annual Water Diverted.

Equation 3.12

$$\begin{aligned}
 \text{Annual Water Diverted} &= \frac{(\text{Channel Flow Rate} - \text{Overflow}) \times \text{No. of Operating Days}}{226.3} \\
 &= \frac{(\text{ } - \text{ }) \text{ US gpm} \times \text{ } \text{ days}}{226.3} \\
 &= \text{ } \text{ ac-ft}
 \end{aligned}$$

Answer:

Step 2. Water Diversion Check

Is ac-ft less than ac-ft?

Yes

- OK

No

- The licensed amount of water is exceeded.
- Reduce conveyance losses

Conveyance Loss Check

Calculation:

Step 3. Calculate conveyance losses

Equation 3.14(a)

$$\begin{aligned}
 \text{Reduction in Channel Flow Rate} &= \text{Flow Rate at Diversion} - \text{Flow Rate at Irrigation} \\
 &= \text{ } \text{ US gpm} - \text{ } \text{ US gpm} \\
 &= \text{ } \text{ US gpm}
 \end{aligned}$$

Equation 3.14(b)

$$\begin{aligned}
 \text{Conveyance Losses} &= \frac{\text{Reduction in Channel Flow Rate} \times \text{No. of Operating Days}}{226.3} \\
 &= \frac{\text{ } \text{ US gpm} \times \text{ } \text{ days}}{226.3} \\
 &= \text{ } \text{ ac-ft}
 \end{aligned}$$

Answer:

Step 4. Assess Conveyance Losses

**Recommended Maximum
Conveyance Losses** = **Water Licensed Amount x 25%**

= 1 ac-ft x 25%

= 9 ac-ft

Is 8 ac-ft equal to or less than 9 ac-ft?

☐ **Yes**

- OK

☐ **No**

- see action items.

Worksheet 7 Intake Screen Area Check

(can be used for both sprinkler and trickle systems)

Information:

Irrigation system flow rate from Worksheet 4(a) or 4(b)	<input type="text"/>	1	US gpm
Screen mesh size used	<input type="text"/>	2	mesh
Percent screen open area of mesh size from Table 3.4	<input type="text"/>	3	%
Number of screened surface (for flat screens only)	<input type="text"/>	4	
Screen length (for both flat and cylindrical screens)	<input type="text"/>	5	ft
Screen width (for flat screens only)	<input type="text"/>	6	ft
Screen breadth (for flat screens only if end area is screened)	<input type="text"/>	7	ft
Screen diameter (for cylindrical screens only)	<input type="text"/>	8	ft

Calculation:

Step 1. Calculate required screen surface area.

Equation 3.15

$$\begin{aligned}
 \text{Suggested Screen Surface Area} &= \frac{\text{Flow Rate}}{0.448 \times \% \text{ Open Area}} \\
 &= \frac{\text{1 US gpm}}{0.448 \times \text{3 \%}} \\
 &= \text{9 ft}^2
 \end{aligned}$$

Step 2. Calculate actual screen area.

Equation 3.16(a) Flat Screen

$$\begin{aligned}
 \text{Total Flat Surface Area} &= \text{No. of Flat Screened Surface} \times \text{Length} \times \text{Width} \\
 &\quad (+ \text{end area if screened}) \\
 &= \text{4} \times \text{5 ft} \times \text{6 ft} \\
 &\quad (+ \text{6 ft} \times \text{7 ft}) \\
 &= \text{10 ft}^2
 \end{aligned}$$

Note: End area is not screened.

Equation 3.16(b) Cylindrical Screen

$$\begin{aligned}
 \text{Total Cylindrical Surface Area} &= 3.14 \times \text{Diameter} \times \text{Length} (+ \text{end area if screened}) \\
 &= 3.14 \times \text{Diameter} \times \text{Length} + \left[\frac{3.14 \times (\text{Diameter})^2}{4} \right] \\
 &= 3.14 \times \text{8 ft} \times \text{5 ft} + \left[\frac{3.14 \times (\text{8 ft})^2}{4} \right] \\
 &= \text{11 ft}^2
 \end{aligned}$$

Answer:

Step 3. Is 9 ft² less than 10 or 11 ft²?

Yes - OK

No - Screen area is too small. Refer to action items.

Worksheet 8 Irrigation Water Quality Check

(can be used for both sprinkler and trickle systems)

Calculation:

Step 1. SAR or SAR_{adj} Check

SAR for sprinkler systems	<input type="text"/>	1	
SAR _{adj} for trickle systems	<input type="text"/>	2	
Electrical conductivity (EC) (Table 3.5)	<input type="text"/>	3	dS/m
Restriction on water use from Table 3.5 or 3.6	<input type="text"/>	4	

If the answer in Box 4 is slight to moderate or severe, water use from this source may need to be restricted.

Step 2. Pathogen Check

E.Coli	<input type="text"/>	5	cfu/100 ml
Fecal coliform	<input type="text"/>	6	cfu/100 ml

Answer: Use Table 3.5 to determine if the values are within acceptable parameters.

Total number of catch cans		1
----------------------------	--	---

= 2

[illegible]

Average Catch Overall =  3 mm
1 mm
6 mm

= $\frac{5}{6}$ mm x 100

= 7 %

Is % more than or equal to 80% (for sprinkler systems) or 90% (for trickle systems)

<input type="checkbox"/>	Yes	Ok.
<input type="checkbox"/>	No	See action items.

Worksheet 10 Sprinkler Irrigation Scheduling Using Water Budget Method

Information:

Maximum soil water storage (SWS) capacity mm
 Maximum soil water deficit (MSWD) mm
 Crop coefficient (K_c)

Analysis:

Nomenclature:

PSWS = Previous Soil Water Storage
 EP = Effective Precipitation
 IRR = Net Depth of Irrigation Water Applied
 ET_o = Reference Evapotranspiration
 K_c = Crop Coefficient
 CSWS = Current Soil Water Storage

All units are in millimetres (mm) except for Date and K_c .

Date	PSWS	+	EP	+	IRR	-	ET_o	x	K_c	=	CSWS
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=	

¹ Even though the total water storage would be 113 mm, the maximum soil water storage can only be 110 mm. The rest of the water is therefore assumed to be lost due to deep percolation and/or runoff.

² The maximum depletion of 55 mm is reached, so irrigation should start.

Worksheet 11 Trickle Irrigation Scheduling Using *Plant Water Requirement Method*

Information:

Maximum zone operating time **1** hr/day
Peak ET **2** mm

Analysis:

Date	Daily ET _o [mm]	x	K _c	=	ET _c [mm]	Operating Time [hr/day]
		x		=		4
		x		=		4
		x		=		4
		x		=		4
		x		=		4
		x		=		4
		x		=		4
		x		=		4
Weekly Total						
Average						

Sample Calculations (July 20):

Equation 4.4

$$\begin{aligned}
 \text{Zone Operating Time} &= \text{Maximum Zone Operating Time} \times \frac{\text{ET}_c}{\text{Peak ET}} \\
 &= \text{1} \text{ hr/day} \times \frac{\text{3} \text{ mm}}{\text{2} \text{ mm}} \\
 &= \text{4} \text{ hr/day}
 \end{aligned}$$

Answer:

Worksheet 12 Trickle Irrigation Scheduling Using **Water Budget Method**

Information:

Emitter spacing (S_1)	<input type="text"/>	1	m
Row spacing (S_2)	<input type="text"/>	2	m
Maximum soil water storage (SWS) capacity	<input type="text"/>	3	mm
Emitter Flow Rate (Q)	<input type="text"/>	4	L/hr
Application efficiency (AE)	<input type="text"/>	5	%

Calculation:

- (a) The maximum soil water deficit (MSWD) for trickle systems is 25% of the SWS; therefore,

$$\begin{aligned}
 \text{MSWD} &= \text{[3]} \text{ mm} \times 25\% \\
 &= \text{[6]} \text{ mm} \\
 &= \text{Net Depth of Irrigation Water Applied (IRR)}
 \end{aligned}$$

- (b) Irrigation should start when the balance reaches:

$$\begin{aligned}
 &= \text{[3]} \text{ mm} - \text{[6]} \text{ mm} \\
 &= \text{[7]} \text{ mm}
 \end{aligned}$$

- (c) Determine operating time

Equation 4.5

$$\begin{aligned}
 T &= \frac{S_1 \times S_2 \times \text{IRR} \times 100\%}{Q \times \text{AE}} \\
 &= \frac{\text{[1]} \text{ m} \times \text{[2]} \text{ m} \times \text{[4]} \text{ mm} \times 100\%}{\text{[4]} \text{ L/hr} \times \text{[5]} \%} \\
 &= \text{[8]} \text{ hr}
 \end{aligned}$$

- (d)

Nomenclature:

PSWS	=	Previous Soil Water Storage
EP	=	Effective Precipitation
IRR	=	Net Depth of Irrigation Water Applied
ET_o	=	Reference Evapotranspiration
K_c	=	Crop Coefficient
CSWS	=	Current Soil Water Storage

All units are in millimetres (mm) except for Date and K_c .

Date	PSWS	+	EP	+	IRR	-	ET_o	x	K_c	=	CSWS
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=	
		+		+		-		x		=
