... and redefining our region

Are we ready?

CIO Executive Summit by CIOs, for CIOs™

- ❖ The role of the Chief Digital Officer
- ❖ Vancouver's Digital Strategy

Evanta

Becoming smart takes time

What makes a city Smart?

Hint: It's not the technology

- Governance
- Process Optimization
- Organizational Maturity
- A Robust Infrastructure
- Goals and Vision
- Agility
- Collaboration
- Leadership Commitment
- Community Orientation
- Structure to Identify Value in Investments
- Engaged Communities
- Digital Platforms
- Advanced Data and Analytics
- Enterprise Level Coordination
- Industry Partnerships
- Links to Academia
- Innovative Business Models
- Flexible Frameworks

We are constantly evolving

- The #SmarterTogether bid was the culmination of a multi year journey
- Digital transformation was a key enabler
- Community engagement was reinvented to co-develop the proposal with the community
- Rich content from industry world wide pointed to an advanced role for the City within the Smart City ecosystem

The Smart Cities Challenge

Two Cities ready for this moment

- Two leading cities
- Established strategies, when it comes to digital maturity, technology transformation and smart city innovation
- Common problems
- Understand the benefits of collaboration
- Similar abilities to implement and working together can develop scalable Canadian solutions
- Working relationships that will endure beyond the smart cities challenge
- MOU for a common Smart City approach

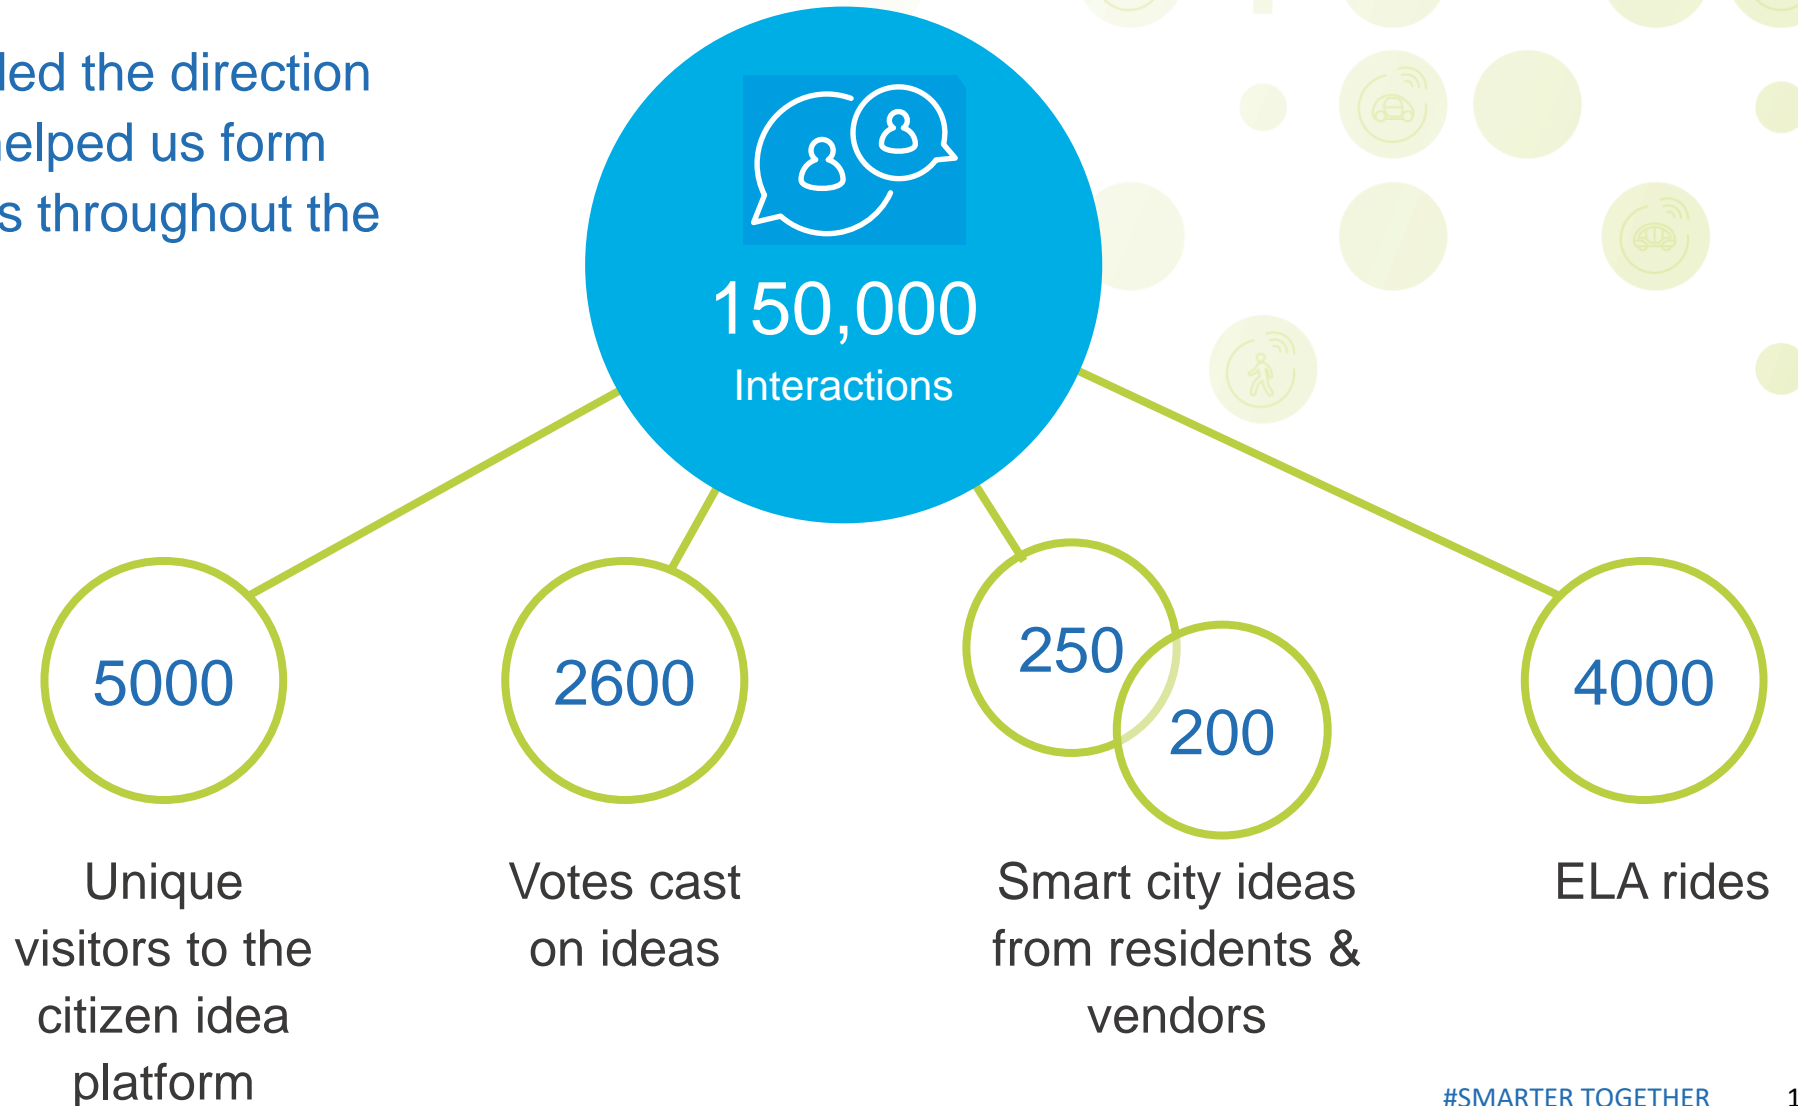

Re-inventing Engagement

Community feedback

Our communities provided the direction for our challenge, and helped us form the solution components throughout the process.

Community touchpoints

Developing the Smart Cities Challenge bid included extensive community engagement including:

- Greater Vancouver Board of Trade information sessions
- Street teams
- Stakeholder workshops
- VANquish collisions hackathon
- Civic Tech YVR
- AV perception survey
- Mission Possible event
- ELA demo

A clear community priority emerged.

Choosing a measurable goal involving Mobility and Safety & Security

Each year in Vancouver and Surrey on average we see:

Innovation Corridor...2 ways

- Two corridors in different urban contexts:
 - A busy urban area in Vancouver
 - A densifying suburban area in Surrey
- Powered by the same smart mobility technology to achieve similar outcomes
- Scalable to Canada and the world

Identifying outcomes to achieve through advanced data and technology

- Improved safety
- Reduced emissions
- Healthier communities
- Increased availability of mobility options
- More socially connected communities
- Increased accessibility to the community
- Higher people-moving capacity
- Enhanced travel experience

From vision to a program plan

The #SmarterTogether program is the result of unprecedented collaboration and joint engagement.

Community engagement

- 150,000 interactions
- 200 vendor ideas
- 250 citizen ideas
- 5000 votes cast to prioritize ideas
- 4000 rides in our AV shuttle demo

Innovative procurement

- 172 vendor submissions
- Agile evaluation process
- 55+ partners
- 81+ projects

Collaboration and co-design

- Partnership of government, education, industry and communities
- Scalable program & portfolio model
- City as a Platform innovation program

A practical delivery plan for our two Cities

- 5-year project roadmap
- Milestones mapped to measurable community outcomes
- \$36.5m in Vendor contributions
- \$15m City contributions

VANCOUVER

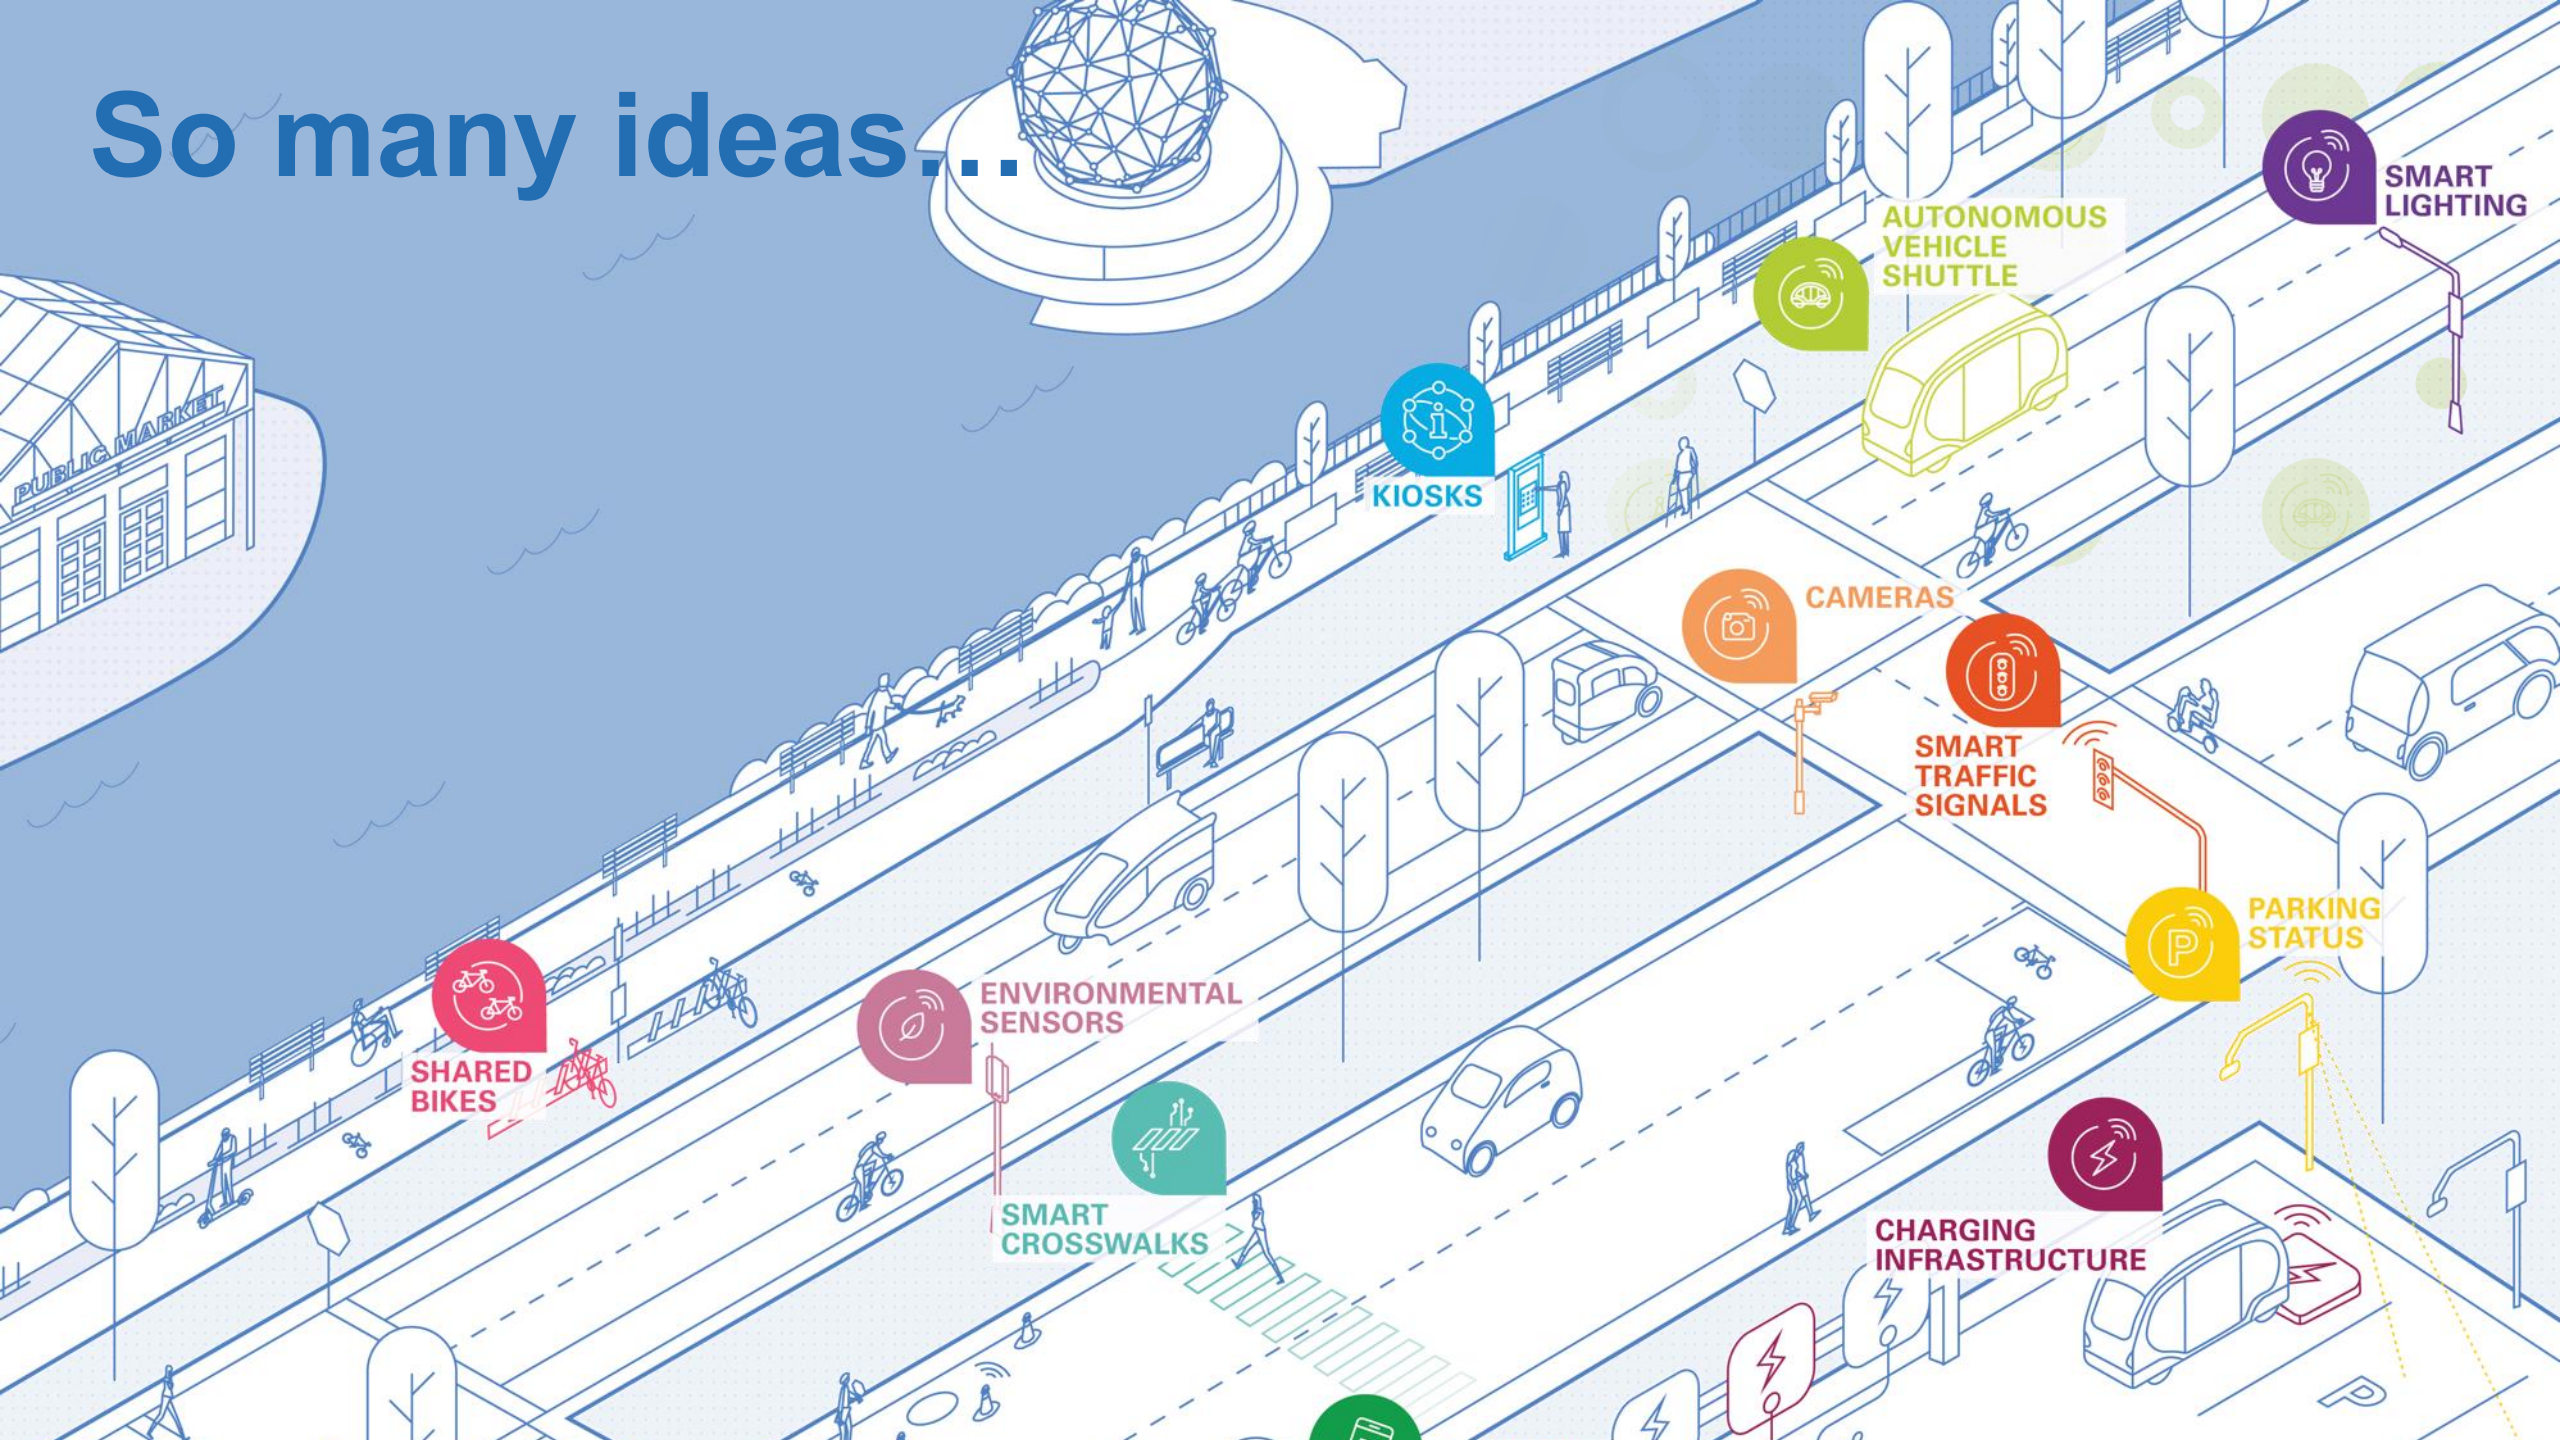

SURREY

A bigger role for the City in the Smart City ecosystem

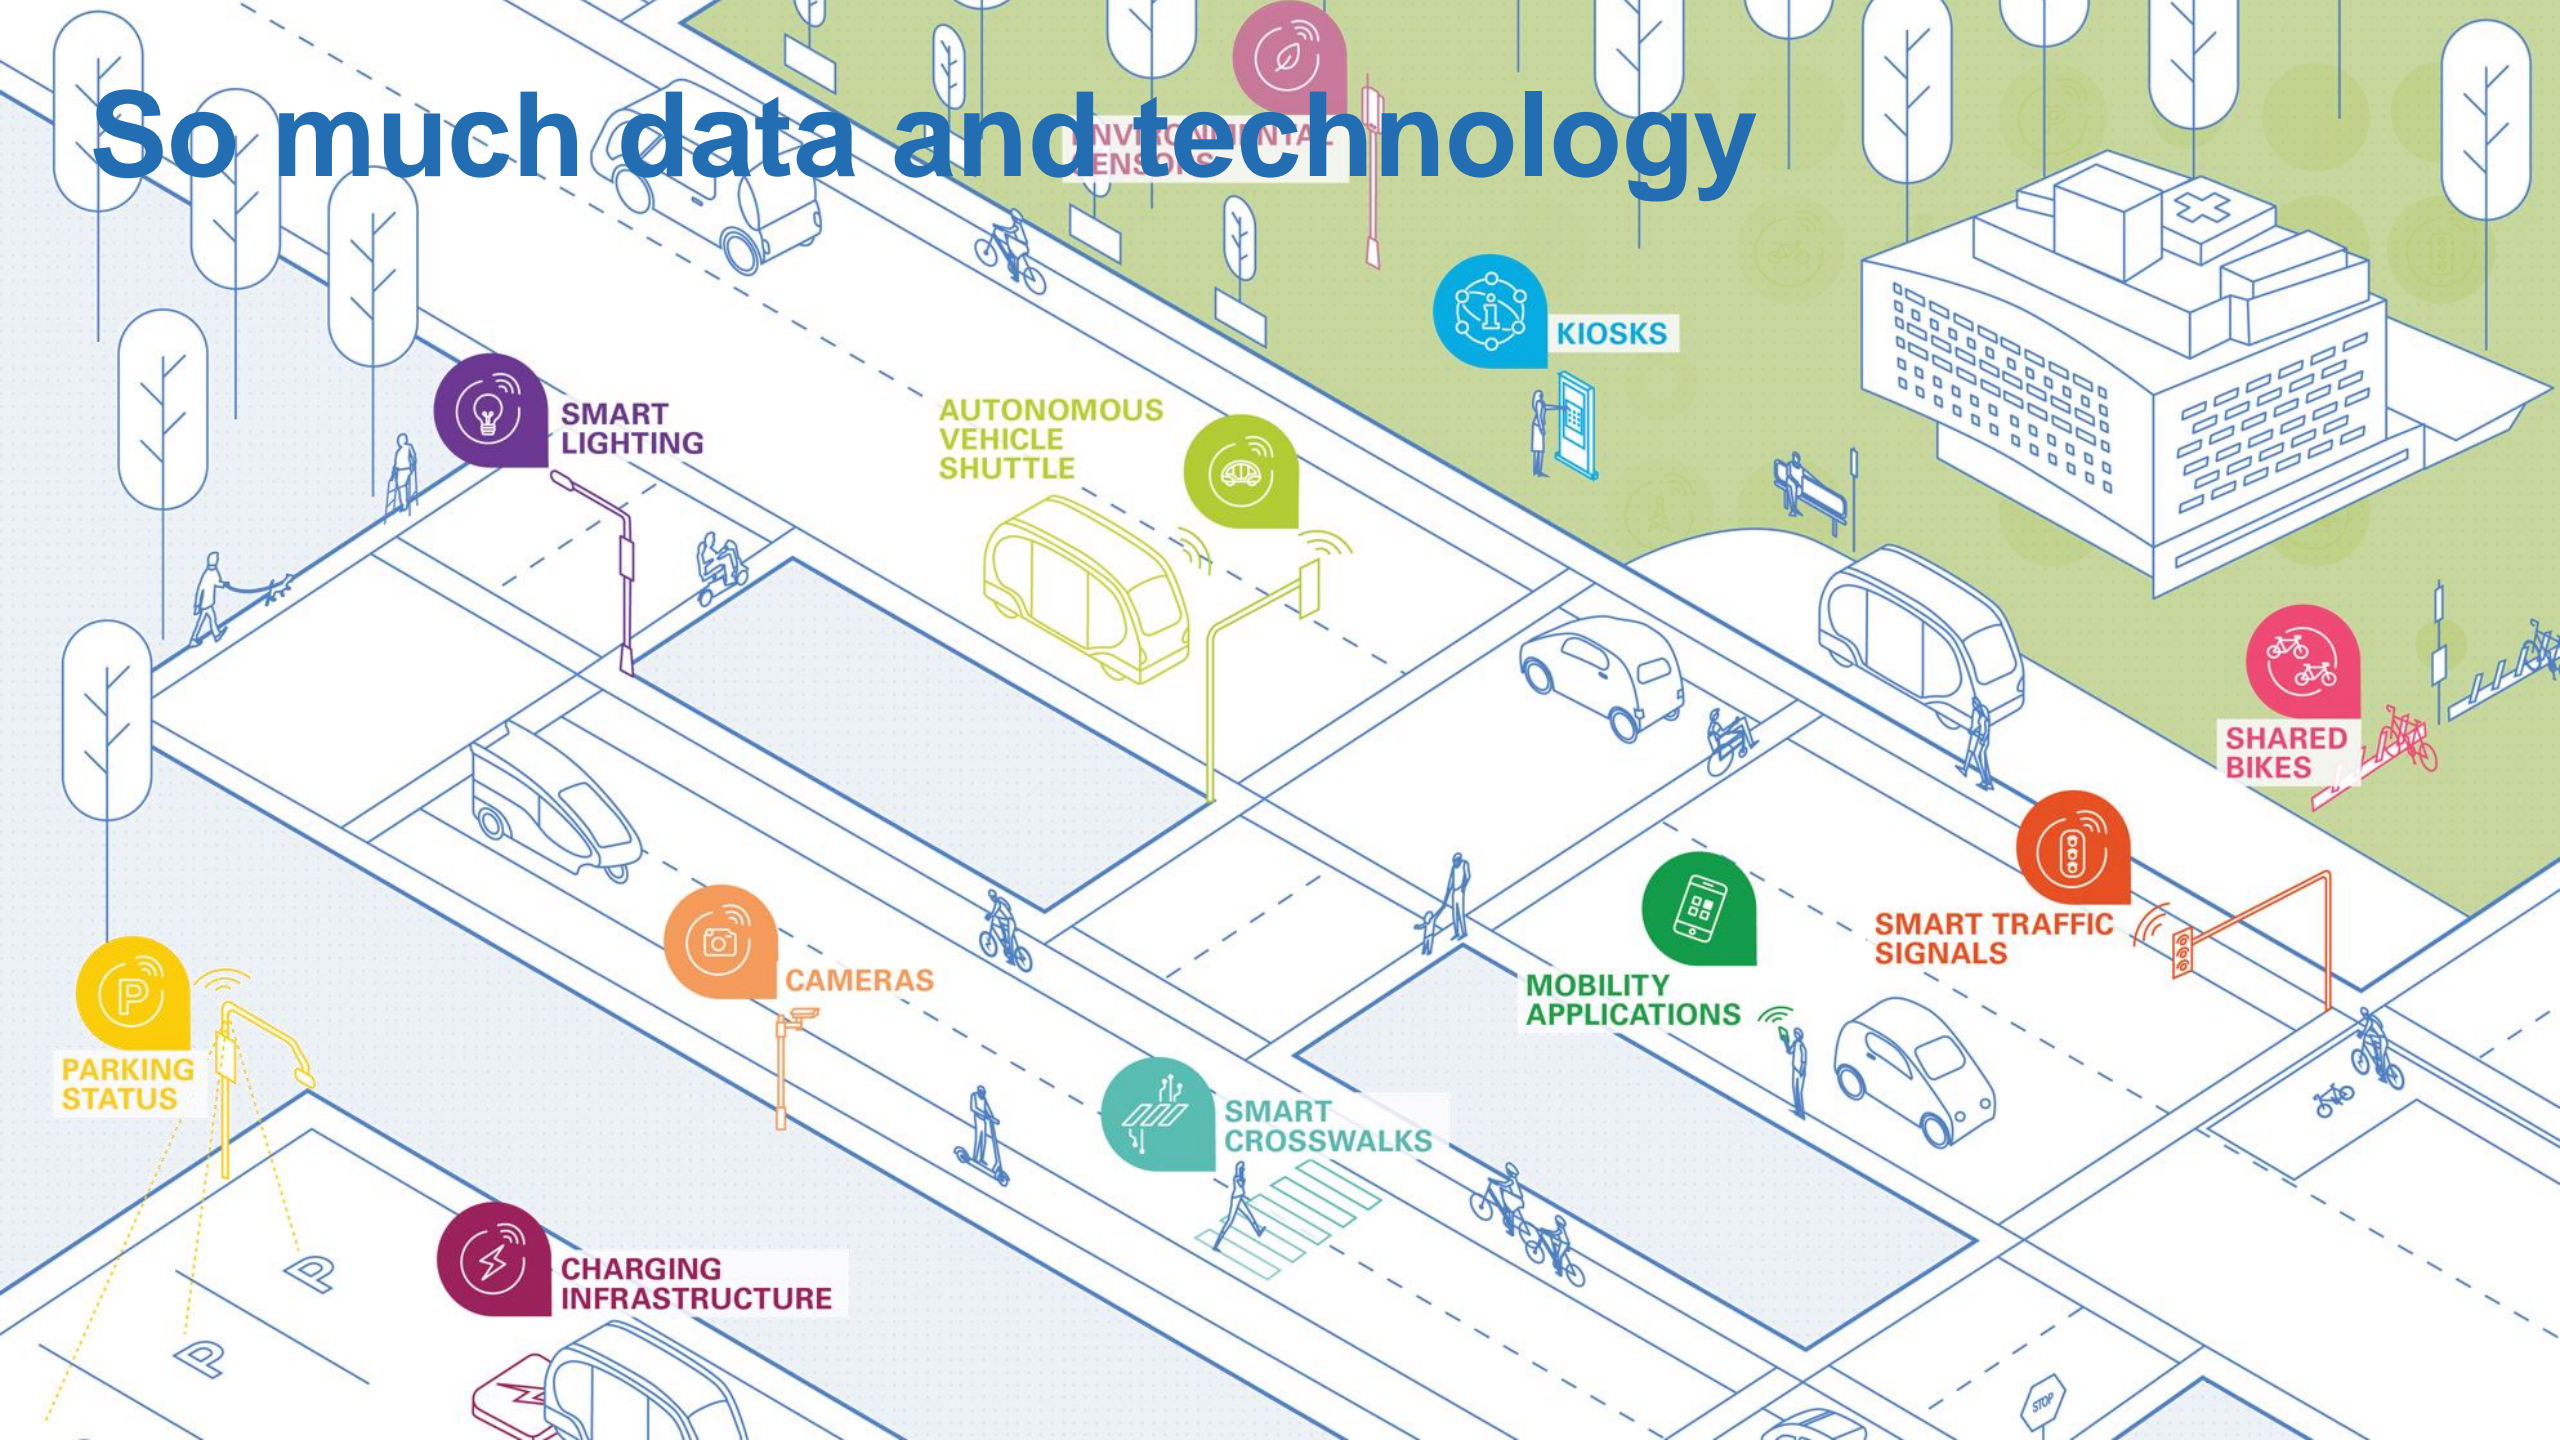

Technically complex ecosystem

So many ideas...

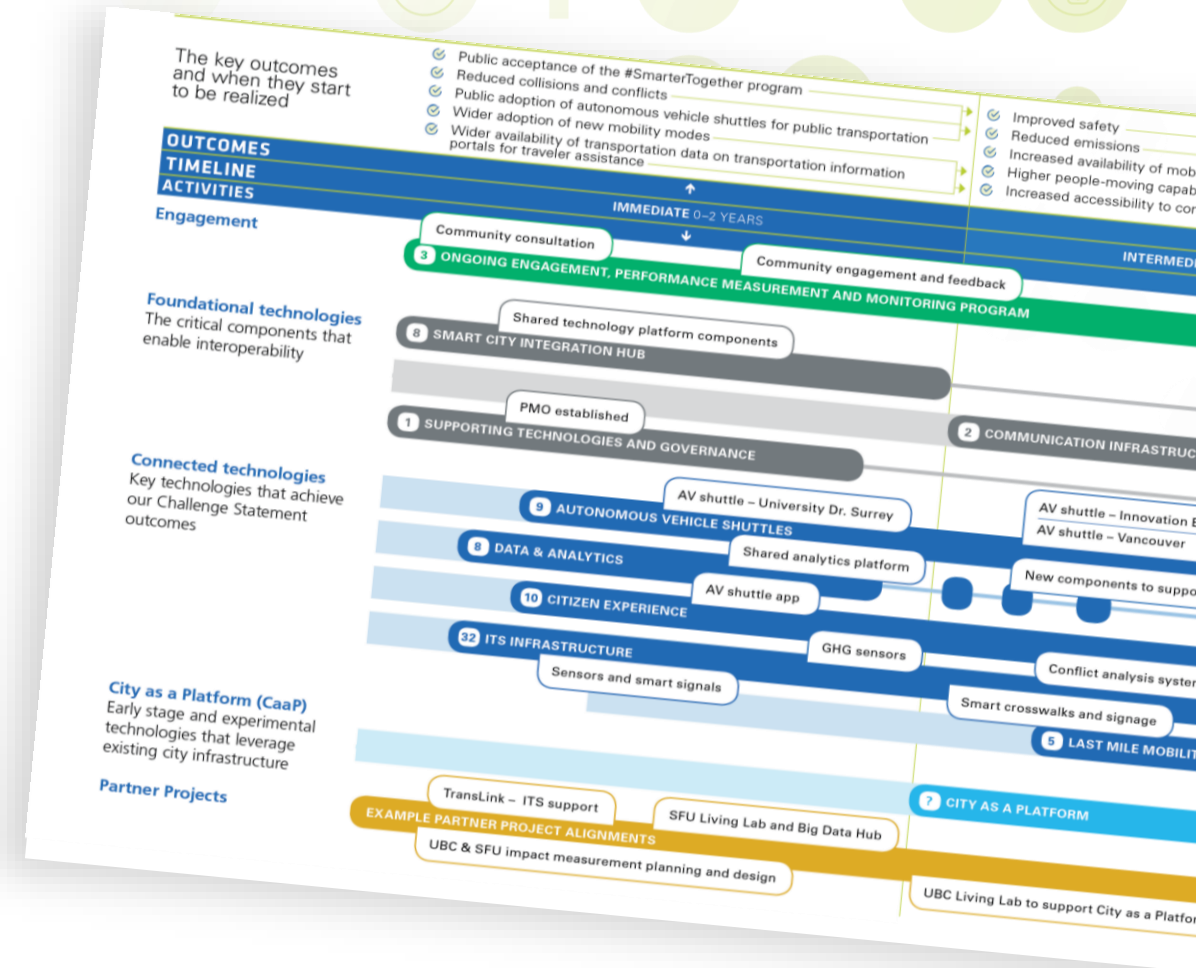

So much data and technology

Overall program highlights

Unprecedented effort to build a technical proposal:

- ✓ 81 project proposals from 55 partners
- ✓ \$36.5 million in potential private sector contributions

Program technology highlights

The Smart City Integration Hub

A software platform that represents the cornerstone of corridor security, privacy, and interoperability.

Autonomous vehicle shuttles and last mile mobility options

Equipment that ensures safe travel and provides abundant and accessible mode shift opportunities for all residents.

Intelligent traffic system devices

Including sensors and controls embedded in traffic infrastructure that collect data and enable real-time responses to specific traffic situations.

Checking in with Communities

“I live here with my wife and baby daughter and we have watched your little shuttle go back and forth and it makes us smile!

You have my support for anything that moves people quietly, without pollution, slowly, safely, through our neighbourhood!”

Darren S.

Vancouver resident commenting on our ELA demonstration

Immense scale

#SmarterTogether governance model

1

Engagement

A program for open, diverse and inclusive community, stakeholder and partner engagement and performance measurement

2

Foundational technologies

- Smart City Integration Hub
- Communication infrastructure

3

Connected technologies

- ITS infrastructure
- AV shuttles
- Citizen experience
- Last mile mobility
- Data & analytics

4

City as a Platform

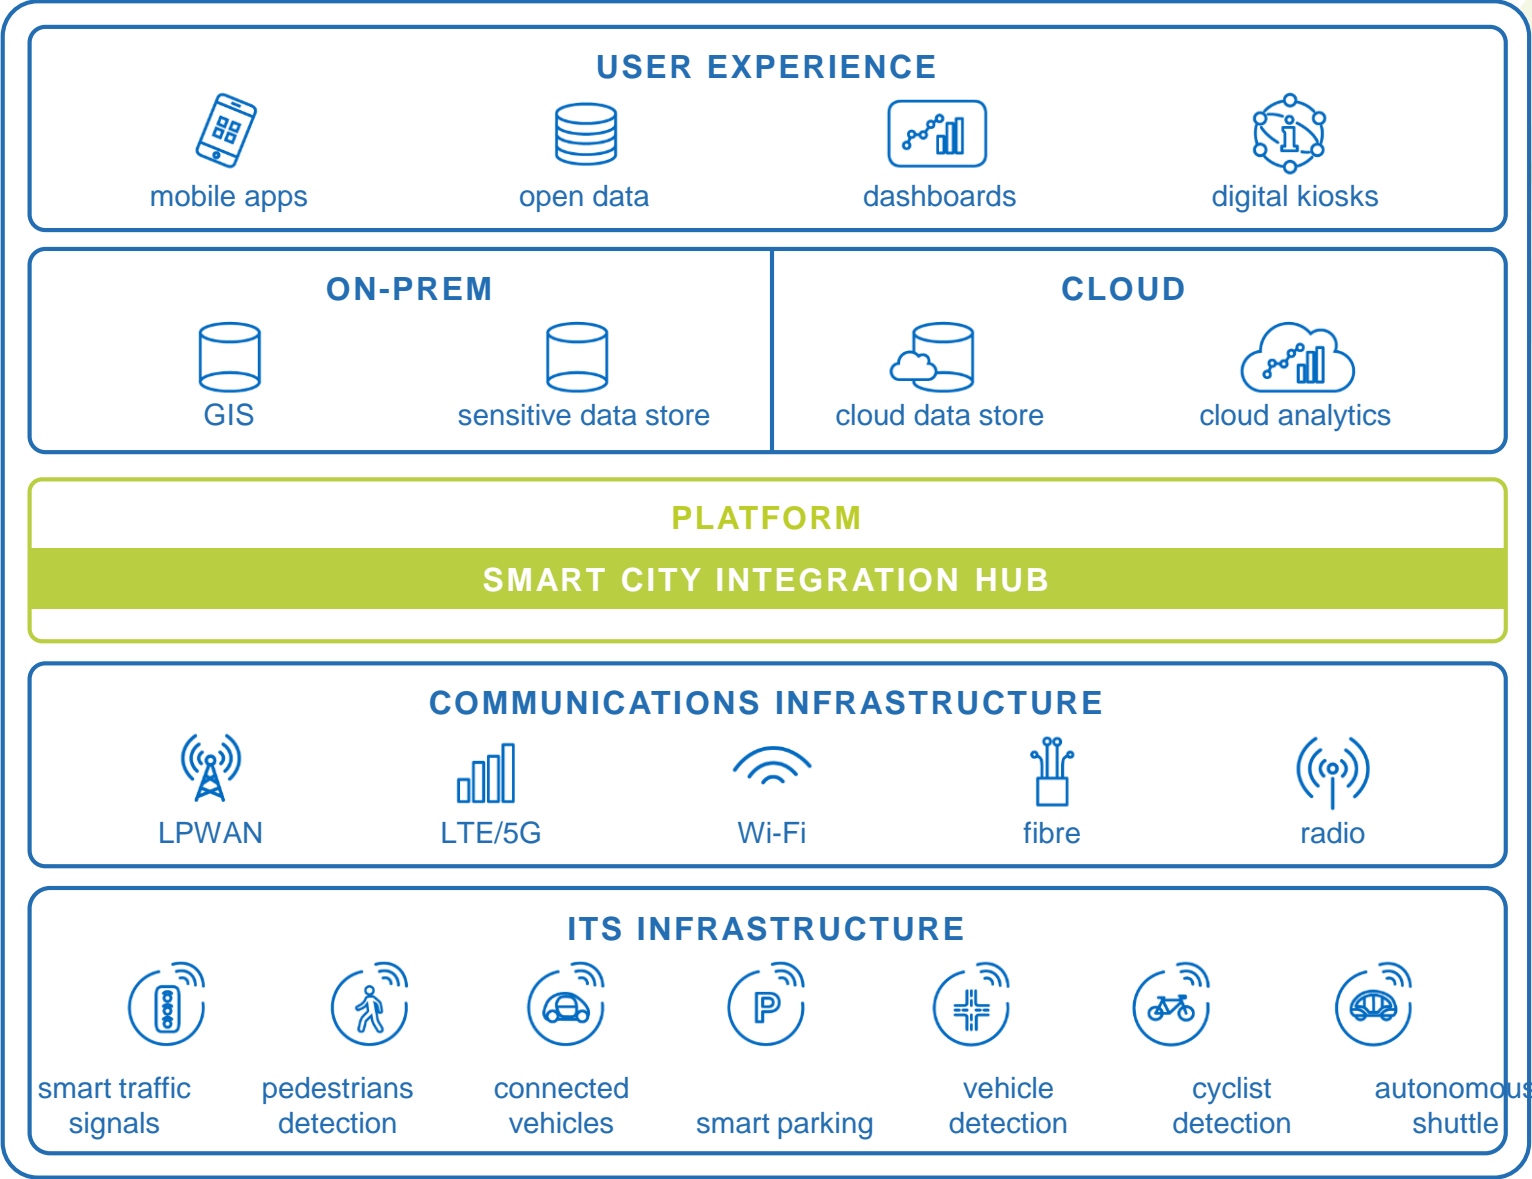

Program to develop early stage and experimental technologies that leverage existing city infrastructure

5

Supporting technologies

Technology that support regulation, resilience, and engagement efforts

Architecting a Smart City Integration Hub

**#SmarterTogether represents a
commitment to managing
complexity through collaboration**

Smart City is a state of mind not an end state

- Governance is key to a successful program design
- Digital maturity is a key enabler
- Working with two cities helped create a blueprint for other cities to follow
- Engaging citizens, stakeholders and industry in collaboration resulted in better outcomes
- Beyond Smart Cities, this collaborative approach is a model for tackling other challenges together
- **We didn't win but the future is still coming**
