1 Total domestic demand is equal to final domestic demand (personal expenditure, capital formation and government expenditure) plus intermediate domestic demand (inputs into the production process) plus additions to inventory stocks of producers, wholesalers and retailers. In each province and for each commodity, total demand is identical to purchases from the rest of the world (international imports), from other provinces (interprovincial imports), and within province (self-supply).

2 Total domestic supply is defined as the value of production plus shipments out of the inventories of producers, wholesalers and retailers. In each province and for each commodity, total supply is identical to sales to the rest of the world (international exports and re-exports), to other provinces (interprovincial exports), and within province (self-supply).

Note: Data are not fully comparable with previously published data (from CANSIM Table 386-0002).

1 Total domestic demand is equal to final domestic demand (personal expenditure, capital formation and government expenditure) plus intermediate domestic demand (inputs into the production process) plus additions to inventory stocks of producers, wholesalers and retailers. In each province and for each commodity, total demand is identical to purchases from the rest of the world (international imports), from other provinces (interprovincial imports), and within province (self-supply).

2 Total domestic supply is defined as the value of production plus shipments out of the inventories of producers, wholesalers and retailers. In each province and for each commodity, total supply is identical to sales to the rest of the world (international exports and re-exports), to other provinces (interprovincial exports), and within province (self-supply).

Note: Data are not fully comparable with previously published data (from CANSIM Table 386-0002).

1 Total domestic demand is equal to final domestic demand (personal expenditure, capital formation and government expenditure) plus intermediate domestic demand (inputs into the production process) plus additions to inventory stocks of producers, wholesalers and retailers. In each province and for each commodity, total demand is identical to purchases from the rest of the world (international imports), from other provinces (interprovincial imports), and within province (self-supply).

2 Total domestic supply is defined as the value of production plus shipments out of the inventories of producers, wholesalers and retailers. In each province and for each commodity, total supply is identical to sales to the rest of the world (international exports and re-exports), to other provinces (interprovincial exports), and within province (self-supply).

Note: Data are not fully comparable with previously published data (from CANSIM Table 386-0002).

1 Total domestic demand is equal to final domestic demand (personal expenditure, capital formation and government expenditure) plus intermediate domestic demand (inputs into the production process) plus additions to inventory stocks of producers, wholesalers and retailers. In each province and for each commodity, total demand is identical to purchases from the rest of the world (international imports), from other provinces (interprovincial imports), and within province (self-supply).

2 Total domestic supply is defined as the value of production plus shipments out of the inventories of producers, wholesalers and retailers. In each province and for each commodity, total supply is identical to sales to the rest of the world (international exports and re-exports), to other provinces (interprovincial exports), and within province (self-supply).

Note: Data are not fully comparable with previously published data (from CANSIM Table 386-0002).

1 Total domestic demand is equal to final domestic demand (personal expenditure, capital formation and government expenditure) plus intermediate domestic demand (inputs into the production process) plus additions to inventory stocks of producers, wholesalers and retailers. In each province and for each commodity, total demand is identical to purchases from the rest of the world (international imports), from other provinces (interprovincial imports), and within province (self-supply).

2 Total domestic supply is defined as the value of production plus shipments out of the inventories of producers, wholesalers and retailers. In each province and for each commodity, total supply is identical to sales to the rest of the world (international exports and re-exports), to other provinces (interprovincial exports), and within province (self-supply).

Note: Data are not fully comparable with previously published data (from CANSIM Table 386-0002).
