

BRITISH COLUMBIA FARM INDUSTRY REVIEW BOARD

Supervisory Review re 2016 Amendments to Schedule "B" Operating Agreement for Chicken

AFFIDAVIT OF SCOTT CUMMINGS

I, SCOTT CUMMINGS, of 13542 – 73 A Ave, Surrey, British Columbia, businessperson,
SWEAR THAT:

1. I am the Chief Financial Officer of Sunrise Farms and as such I have personal knowledge of the facts deposed to herein, except where stated to be based upon information and where so stated I verily believe those facts to be true.
2. I have read the Affidavit of Ken Huttema sworn in these proceedings and agree with and adopt the content of paragraphs 5-8 of that Affidavit.
3. Sunrise Farms, under its corporate umbrella, has primary processing operations in B.C., Alberta and Manitoba. It also has further processing operations in B.C. and Ontario.
4. In or about 2006-2007, the B.C. processors generally stopped providing their market requirements to the British Columbia Chicken Marketing Board ("BCCMB") in writing. This was done out of frustration with the national allocation process, and the failure of CFC to issue allocations on anything other than a *pro rata* basis.
5. Even though the B.C. processors chose to protest the failure of CFC and the BCCMB to allocate production in accordance with the regional responsiveness provisions of the Operating Agreement, the BCCMB was made aware of the market needs of the B.C. processors. In most periods either the CFC rep or the GM of the BCCMB would talk to processors to discuss their requirements. The BCCMB would aggregate these numbers, and other relevant information, and send the aggregate number to the Pricing and Production Advisory Committee for comment.
6. Despite the B.C. processors providing their requirements to the Board, the allocation to B.C. came back *pro rata*.
7. As a further processor, Sunrise is acutely aware of the supply share imbalance between the West and the East. In determining supply share, domestic allocation is only a part of the equation. Any allocation methodology must also consider the potential effects of TRQ and fowl imports because the competitive position of the processors at the national level is significantly affected by product accessed by processors in Central Canada through TRQ and fowl imports. In B.C., Sunrise has been forced to purchase product for its B.C. plant from sources outside the province. Sunrise would prefer to use chicken grown in B.C. for its products, but there is simply not enough chicken grown in B.C. to meet its needs.
8. Access to supply and the cost of supply are the two fundamental factors for Sunrise in deciding in which province to make investments. Sunrise has made investments in Ontario because of the more favourable pricing and supply positions in that province. It is increasingly difficult to access the product needed in B.C., and this has caused

Sunrise to focus its investments on its Eastern operations. The proposed amendments to the Operating Agreement will not reverse this trend for Sunrise. Rather, it will accelerate investment in the East – Sunrise needs to focus its operations where the chicken is, and that is increasingly in Central Canada.

9. When British Columbia re-entered the system in 2001, part of the agreement was that it could continue its export program. Because B.C. processors did not have access to TRQ to bring white meat into B.C. for further processing requirements, B.C. processors developed a way to obtain white meat for their processing operations that became known as the export program. For every 1 kg of dark meat exported, B.C. processors could grow an equivalency of 1.5kg live weight. This allowed additional white meat to be grown under the domestic allocation and to remain in BC for the further processing sector.
10. When BC signed on to the new agreement in 2001, the processors compromised on the co-efficient of 1.5kg. They agreed to reduce the re-grow co-efficient to 1.25kg. However, as pricing on the export market has fallen, the co-efficient of 1.25kg is no longer profitable. The processors have substantially reduced their export production in light of the current pricing. The previous co-efficient, if re-implemented, would increase the viability of the program and allow BC processors to access additional kilograms of product.
11. On May 15, 2014 the processors met with the BCCMB and raised several concerns, as outlined in the April 4, 2016 submissions of the PPABC (at paras. 35-36). Those concerns, however, have not been addressed in the proposal currently before FIRB.
12. I am not satisfied that the BCCMB engaged in adequate consultation with the B.C. processors before signing the MOU and endorsing the current proposed amendments to the Operating Agreement. The MOU and proposed amendments to the Operating Agreement do not address the fundamental concerns of the processors, namely that the West is experiencing a significant supply imbalance which is affecting the processors' ability to maintain and grow their existing markets. The MOU and proposed changes to the Operating Agreement do nothing to ensure that the domestic allocation is being distributed across the country in a manner responsive to the actual market needs of the processors.
13. At no point did the BCCMB meet with the B.C. processors to discuss how the supply imbalance could be corrected in a new agreement. And at no point did the BCCMB respond to the concerns raised by the processors.
14. I was not shown a copy of the draft MOU before it was signed.
15. Sunrise Farms was never asked to meet individually with the BCCMB to discuss the proposed amendments to the Operating Agreement, either before or after the MOU was signed.
16. The failure of CFC to implement the differential allocation method in the current Operating Agreement has created a supply imbalance in favour of processors in Central Canada. Central Canada has consistently advocated for less production than the West, and since 2006 has received the same percentage allocation increase or decrease as the West. This, combined with changes in TRQ and fowl, has resulted in a growing imbalance which has allowed processors from Central Canada to strengthen their market share and encroach in the retail markets and food service contracts of the

Western processors. The current proposed amendments to the operating agreement do not address the imbalance, and most importantly do not allow for meaningful differential growth in the West. Western processors are disadvantaged in having limited access to TRQ or fowl, and the diminishing economic viability of the export program.

17. The bottom-up allocation system contemplated under the current Operating Agreement was workable. Allocations for the first three years show differential growth across the country. Attached and marked as **Exhibit "A"** to this affidavit are true copies of selected CFC allocation sheets from 2001-2005.
18. Abandoning bottom-up allocation in favour of *pro rata* has not resulted in differential growth and does not put chicken where it is needed. The methodology under the MOU perpetuates the problem which arose in 2004 and has been exacerbated each year since.

Question?
Please give me a call Jan.

* The following changes to British Columbia's domestic and export production in the previous year have been made to better reflect the actual situation:

- Domestic Production: + 315,673 kg ewe
- Export Production: - 315,673 kg ewe

* Des changements suivants, appliqués à la production domestique et à la production d'exportation pour la Colombie-Britannique, au cours de l'année dernière ont été effectués pour mieux refléter la situation actuelle:

- Production domestique: + 315 673 kg évêcré
- Production à l'exportation: - 315 673 kg évêcré
