

BUSINESS RISK MANAGEMENT PROGRAMS

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

GOVERNMENT RECORDS SERVICE

INFORMATION SCHEDULE APPROVALTitle: *Business Risk Management Programs Operational Records Classification System (ORCS)*Ministry of Agriculture
Business Development Division
Business Risk Management Branch

Scope of Schedule:

The *Business Risk Management Programs ORCS* establishes a classification system and retention and disposition schedule for records relating to developing and delivering a suite of business risk management programs, which are insurance and income protection/stabilization funded through a multi-lateral framework agreement between the provinces and the federal government of Canada, pursuant to the *Farm Income Insurance Act* (RSBC 1996, c. 130), the *Insurance for Crops Act* (RSBC 1996, c. 229), the *Continuous Crop Insurance Regulation* (BC Reg. 546/95), and the *Farm Income Protection Act* (SC 1991, c. 22). These programs help viable farming operations protect themselves from severe financial losses due to weather perils and market conditions.

The retention periods specified in this schedule meet all operational, fiscal, legal, and audit requirements.

For more information, see the attached schedule.

Earliest date of records covered by this schedule: 1967

The government body endorses this schedule and its implementation.

Email endorsement on file

BUSINESS RISK MANAGEMENT PROGRAMS

OPERATIONAL RECORDS CLASSIFICATION SYSTEM (ORCS)

EXECUTIVE SUMMARY

This *Operational Records Classification System (ORCS)* establishes a classification system and retention and disposition schedule for the operational records created by the Business Risk Management Branch in the Ministry of Agriculture. The program area is responsible for developing and delivering a suite of business risk management programs relating to insurance and income protection/stabilization, currently funded through the Growing Forward multi-lateral framework agreement between the provinces and the federal government of Canada, pursuant to the [Farm Income Insurance Act \(RSBC 1996, c. 130\)](#), the [Insurance for Crops Act \(RSBC 1996, c. 229\)](#), the [Continuous Crop Insurance Regulation \(BC Reg. 546/95\)](#), and the [Farm Income Protection Act \(SC 1991, c. 22\)](#). These programs help viable farming operations protect themselves from severe financial losses due to weather perils and market conditions.

The records document insurance program development such as actuarial certification and commodity level insurance value development; program delivery such as benefits management for income protection programs and claims management for insurance, compensation, and grants programs; program and product development; and reinsurance.

The active and semi-active retention periods specified in the schedule meet all operational, administrative, legal, fiscal, and audit requirements. The final dispositions ensure that records with enduring evidential and historical values are preserved. Business risk management records will be managed in this way:

- Records classified under draft *Agriculture Fisheries and Food (AGF) ORCS* classifications and the draft *Production Insurance ORCS* will have Business Risk Management Programs (BRMP) ORCS classifications and retentions applied to them
- Onsite records classified under the approved *AGF ORCS* will be reclassified to the *BRMP ORCS*. This schedule does not apply to records that are already in off-site storage under the approved *AGF ORCS*, schedule 121300, at the time this *ORCS* is approved.

The following summary describes the records covered by this *ORCS* and identifies their retention periods and final dispositions. In this, records are linked to the *ORCS* by primary and secondary numbers. Please consult relevant primaries for further information.

- 1) Policy-final
(secondary 61000-00)

SO 5y FR

Throughout this *ORCS*, the government archives will fully retain final versions of all policies, procedures, standards and guidelines created by offices having primary responsibility for their development and approval. These records have

[Key to ARCS/ORCS Codes and Acronyms](#)

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This information schedule is approved in accordance with the [Information Management Act \(SBC 2015, c. 27\)](#) and constitutes authority for retention and disposition of the records it covers. Consult your [Records Officer](#).

A SA FD

significant evidential value for documenting the functions covered by this ORCS.

2) Reinsurance treaties (approved)
(secondary 64700-20)

SO+10y nil FR

Reinsurance treaties are designed so that if the program is not able to pay out its indemnities, the funds will be paid by the reinsurance companies that participated in the treaty according to the proportion they have subscribed to.

SO: when the treaty expires. This provides a sufficient period of time to ensure all outstanding claims and litigation are resolved and that the reinsurance treaty for the production year is closed.

FR: The government archives will fully retain approved reinsurance treaties, one of the core documents of the production insurance program, as they provide evidence of the financial obligation and relationship between the BC government, subscribing reinsurers, and a third party company. The treaties possess evidential, informational, and historical value.

3) Final program summary and annual reports
(secondary 61000-15)

SO 5y FR

These are end of program summary reports, such as Wildlife project final reports, and the branch's annual reports.

SO: when the report is approved, and no longer required for reference purposes

FR: The government archives will fully retain final program/project summary reports and branch annual reports because they document the core functions and activities of the branch. They provide a high level overview of each program/project and provide evidence of the branch's overall annual activities.

4) Insurance plan policy wording (approved)
(secondary 61100-45)

SO nil FR

These records document final, approved policy wording for specific commodity types such as grapes, tree fruit, and forage, clarifying contractual responsibilities for the insurer and insured.

SO: upon closure of the production insurance program

FR: The government archives will fully retain final policy wordings because they document the key functions and activities of the

	A	SA	FD
production insurance program and they provide evidence of the government's relationship with agricultural producers.			
5) <u>Actuarial certification</u> (secondary 61100-20)	SO	5y	SR
<p>These records document how the program area meets the provincial requirement of the federal-provincial Growing Forward agreement to provide an actuarial certification to the Government of Canada confirming that probable yield methodologies result in yields that accurately reflect each crop's demonstrated productive capacity. This certification is required every five years or whenever a new methodology is developed or an existing methodology is revised for a crop.</p> <p>SO: upon closure of the production insurance program</p> <p>SR: The government archives will fully retain final certification reports as they provide a clear record of the products, data, and methodologies used to set coverage levels and premiums for the Production Insurance program. All other records will be destroyed.</p> <p>For physical records, box the final certification reports separately from the rest of the file. For electronic records, contact your Records Officer for guidance on transferring the final reports to the government archives.</p>			
6) <u>Production Insurance operational data</u> (secondary 61500-50)	SO	25y	DE
<p>These are producer and insurance policy data residing in the Production Insurance system, CIRRAS, as well as reports that CIRRAS is unable to regenerate.</p> <p>SO: when data is no longer required for statistical analysis and product development purposes</p> <p>25y: The retention period conforms with accepted actuarial principles and meets regulatory requirements as stipulated in the document entitled <i>Canada-British Columbia Production Insurance Program - Actuarial Certification of Premium Rate Methodologies : Annual Crops (2008)</i> and <i>Perennial Crops (2009)</i>.</p>			
7) <u>Commodity level approved values and compliance testing</u> (secondary 61100-35 and 61100-40)	SO	12y	DE
<p>These records document the development of base commodity insurance levels through the calculation of premium rates, probable yields, insurable values; and compliance testing of probable yields and insurable values.</p>

	A	SA	FD
SO: upon completion of the crop year.			
12y: The retention period is based on the 5 year actuarial recertification requirement of the Growing Forward agreement. Two cycles of data are retained in order to perform the calculations required to demonstrate whether probable yield methodologies accurately reflect each crop's demonstrated productive capacity.			
8) <u>Production Insurance claims</u> (secondary 61500-40)	SO	12y	DE
These records document the process of determining if the claimant is eligible for an indemnity under the Production Insurance program.			
SO: upon expiry of the claim's eligibility period, when claim is resolved or determined to be ineligible, and when data used to calculate claim is centrally stored in a system			
12y: The retention period is based on the business requirement to access and analyze data contained in the claim in order to calculate policy coverage levels and to inform direction on program development. Coverage levels are based on a moving 10 year average loss experience. This 10 year period lags one year from the most recent/current production year. The additional year is the gap between the calendar year and the insurance crop year as defined under the individual commodity plan.			
9) <u>Agriculture wildlife client files</u> (secondary 61500-42)	SO	12y	DE
These records document grant and compensation programs such as the wildlife damage mitigation program, wildlife forage loss compensation, and predator loss claims. These cover compensation requests initiated by producers who have experienced losses to crops or livestock resulting from wildlife damage.			
SO: when the participant leaves the program, or the program is replaced or cancelled, and the value of the data required for trend analysis expires			
12y: The retention period is based on the business requirement to access and analyze data in order to calculate policy coverage levels and to inform direction on program development.			
10) <u>Western Livestock Price Insurance program (WLPIP) client files</u> (secondary 61500-60)	SO	12y	DE

[Key to ARCS/ORCS Codes and Acronyms](#)

A SA FD

These records document the delivery of insurance coverage to clients and the management of insurance claims resulting from an unexpected drop in livestock prices.

SO: when the program is replaced or cancelled; and when no longer required for reference purposes.

12y: The retention period is based on the business requirement to access and analyze data in order to calculate policy coverage levels and to inform direction on program development.

11) Production Insurance client contracts
(secondary 61500-20)

SO+6y 6y DE

These records document the contract between the program and the client ensuring the delivery of insurance coverage for damage to crops due to weather-related perils.

SO: upon termination of production insurance contract or if grower does not pay for coverage for 3 consecutive years

12y: The retention period is based on the business requirement to access and analyze data in order to calculate policy coverage levels and to inform direction on program development. Coverage levels are based on a moving 10 year average loss experience. This 10 year period lags one year from the most recent/current production year. The additional year is the gap between the calendar year and the insurance crop year as defined under the individual commodity plan. The retention period is also based on the completion of two audit cycles plus one additional year for each cycle.

12) Coverage analysis case files
(secondary 64700-30)

CY 10y DE

These records document the analysis and development of reinsurance treaties. Reinsurance treaties are designed so that if the program is not able to pay out its indemnities the funds will be paid by the reinsurance companies that participated in the treaty, according to the proportion they have subscribed to. Approved reinsurance treaties are fully retained under 64700-20.

11y: The retention period provides a sufficient period of time to ensure all outstanding claims and litigation are resolved and that the reinsurance treaty for the production year is closed.

13) Federal government approvals
(secondary 64600-20)

SO 10y DE

[Key to ARCS/ORCS Codes and Acronyms](#)

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This information schedule is approved in accordance with the [Information Management Act \(SBC 2015, c. 27\)](#) and constitutes authority for retention and disposition of the records it covers. Consult your [Records Officer](#).

A SA FD

These records document program and product submissions to the federal government, revision documents, and final government approvals.

SO: when program or product is approved by the federal government.

10y: The retention period meets the program area's reference requirements as they often consult the previous 10 years of program/product approval history records.

14) Agristability client files
(secondary 61400-20)

SO 7y DE

These are the client files for the Agristability income protection program, which helps stabilize farm income by managing the risk of large income declines due to market conditions, production loss or increased costs of production.

SO: upon closure of the program or when paper files have been digitized and the data quality has been verified

7y: The retention period is sufficient to meet final program audit closure protocols and provides the required six year average of historic income data to calculate benefit payouts.

15) Issues management files
(secondary 61000-25)

SO 7y DE

These records document issue management of broad or overarching BRMB issues that are not specific to a particular client.

SO: when issue is resolved or no longer required for operational purposes

7y: The retention period meets the branch's needs as issues that have not re-emerged within seven years are unlikely to do so.

16) Commodity economic values calculation
(secondary 61400-25)

FY 6y DE

These records document data calculation of Fair Market Values (FMVs) or average prices for BC commodities, Benchmark Per Unit Margin (BPU) or the average production margin, and Expense Margins (EMs) or expenses required to create revenue, associated with producing a particular commodity or commodity group based on industry standards.

7y: The retention period meets the program area's operational requirements of an average of six years of historic income data to calculate benefit payouts plus an additional year for reference purposes.

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This information schedule is approved in accordance with the [Information Management Act \(SBC 2015, c. 27\)](#) and constitutes authority for retention and disposition of the records it covers. Consult your [Records Officer](#).

	A	SA	FD
17) <u>Product and program development / design</u> (secondary 64600-25)	SO	nil	DE

These records document reviewing and improving existing business risk management programs such as Production Insurance and AgriStability; developing and testing new business risk management programs and products to meet the needs of farming operations; as well as summary work for pilot programs.

SO: when it has been 25 years from project completion or when deemed to not have future value. This provides an adequate period to reference the rationale, consultation, considerations and formulative thinking used in the creation of a program or product. These files may only be destroyed with director approval.

18) <u>Records being held until the closure of the program</u> (secondaries 61000-20, 61100-30, 61100-50, 61300-20, 61300-30)
--

The closing trigger for the following records series' is upon closure of the program:

- secondary 61000-20 Federal / Provincial working group files
- secondary 61100-30 Federal actuarial approvals and recommendations
- secondary 61100-50 Insurance plan policy wording development file

The closing trigger for these records is upon the program being cancelled or replaced, all legal, fiscal and audit values have expired; and when no longer required for reference purposes, plus 5 years:

- secondary 61300-20 Client case files - other programs
- secondary 61300-30 Program administration and delivery - other programs

AgriStability client case files and data, and Western Livestock Price Insurance program (WLPPI) client case files are also held until closure of the program but they are encompassed in categories 14) and 10) above because the additional retention after the program closes is 7 or more years.

19) <u>Systems</u>	SO	nil	DE
--------------------	----	-----	----

The Systems Section provides descriptions of electronic systems and classifications for the records residing on them. The data on the systems are described under the appropriate primary and secondary classifications.

Unless otherwise noted, each system will be destroyed when the records/data on it have been migrated to a new system performing the same function, or

SECTION 1

BUSINESS RISK MANAGEMENT PROGRAMS

PRIMARY NUMBERS

61000 – 64799

Section 1 covers records relating to managing financial risks for agricultural producers associated with accidental crop loss and the effects of severe market volatility on crop prices. The program area is responsible for developing and delivering a suite of business risk management programs relating to insurance and income protection/stabilization, funded through agreements such as the Growing Forward multi-lateral framework agreement between the provinces and the federal government of Canada, pursuant to the [Farm Income Insurance Act \(RSBC 1996, c. 130\)](#), the [Insurance for Crops Act \(RSBC 1996, c. 229\)](#), the [Continuous Crop Insurance Regulation \(BC Reg. 546/95\)](#), and the [Farm Income Protection Act \(SC 1991, c. 22\)](#). This includes records relating to insurance program development such as actuarial certification and commodity level insurance value development; program delivery such as benefits management for income protection programs and claims management for insurance, compensation, and grants programs; program and product development; and reinsurance.

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This information schedule is approved in accordance with the [Information Management Act \(SBC 2015, c. 27\)](#) and constitutes authority for retention and disposition of the records it covers. Consult your [Records Officer](#).

SECTION 1 TABLE OF CONTENTS BUSINESS RISK MANAGEMENT PROGRAMS

61000 - 64799

61000	BUSINESS RISK MANAGEMENT PROGRAMS - GENERAL
61100	INSURANCE PROGRAM RATES AND VALUES DETERMINATION
61300	PROGRAM DELIVERY - GENERAL
61400	PROGRAM DELIVERY - BENEFITS MANAGEMENT
61500	PROGRAM DELIVERY - INSURANCE, COMPENSATION, AND GRANTS PROGRAMS
64600	PROGRAM AND PRODUCT DEVELOPMENT
64700	REINSURANCE

61000 BUSINESS RISK MANAGEMENT PROGRAMS - GENERAL

Records that relate generally to insurance and income protection/stabilization programs that manage financial risks to agri-food businesses resulting from weather, wildlife damage to crops and standing feed, and market volatility. Insurance programs are based on contracts between the insurer, who promises to compensate the insured in case of loss, and the insured, who pays a premium. Income protection/stabilization programs are based on terms, conditions, and guidelines established between the program area and program participants. Compensation and grants programs operate similarly to insurance programs except there is no contractual relationship and clients do not pay premiums or enrollment fees.

Some examples of these business risk management programs are as follows:

- Production Insurance - coverage to BC farmers for weather related perils such as drought, excess moisture, hail, and freeze.
- Western Livestock Price Insurance - coverage to livestock producers providing protection against an unexpected drop in cattle and hog prices over a defined period of time.
- Agriculture Wildlife program - compensation to producers who have experienced losses resulting from damage caused by wildlife.
- AgriStability - margin based income stabilization program that protects producers from large declines in their farming income caused by production loss, increased costs or market conditions.
- AgriInvest - income assistance to producers for small income declines and the provision of support for investments to mitigate risks and improve market outcomes.

Since the majority of business risk management programs are cost-shared with the federal government, representatives from each program area participate on a federal/provincial working group to administer the program. Decisions made at this level include interpreting program rules and handling program exceptions in order to deliver the program consistently across the country.

This primary covers the development of operational policies and procedures, as well as records relating to decommissioned branch applications, federal - provincial working groups, issues management, legacy programs, and reporting.

For audits and compliance reviews, see [ARCS primary 975](#).

END OF PRIMARY

[Key to ARCS/ORCS Codes and Acronyms](#)

61100 INSURANCE PROGRAM RATES AND VALUES DETERMINATION

Records relating to production insurance program development and the provision of insurance coverage to agricultural producers by:

- creating, amending and maintaining insurance plan policy wordings, which are legal contracts outlining the responsibilities of the insurer and insured
- developing commodity level insurance values
- actuarially certifying the Production Insurance program

This primary covers records relating to determining the appropriate premium rates to charge in order to provide insurance coverage for potential risks. Prior to the sale of an insurance policy, various tests must be run in order to meet actuarial certification standards and to ensure that appropriate rates are set for individual production insurance plans. This process includes calculating and testing the following: probable yields, a combination of producer's past yield and the area average yield; insurable values, the value to be paid for each crop and used to calculate the premium rates and indemnity in contracts; and premium rates which are set to recover losses or claims paid over the long-term and to maintain a sustainable program.

This primary also includes records relating to the provincial requirement to provide an actuarial certification to the Government of Canada confirming that probable yield methodologies result in yields that accurately reflect each crop's demonstrated productive capacity. This certification is required every five years or whenever a new methodology is developed or an existing methodology is revised for a crop. Rates and premiums must be set using actuarially sound protocols to ensure that the insurance fund is self-sustaining. Premiums are cost shared between the Province, the federal government, and producers in accordance with existing agriculture policy framework requirements.

This primary covers developing insurance plan policy wordings and commodity level insurance values, as well as actuarially certifying the Production Insurance program.

For a description of CIRRAS, see the Systems Section.

For agreements such as the Growing Forward agreements, see [ARCS 146-25](#).

For issues files, see secondary 61000-25.

For operational policy, see secondary 61000-00.

For other business risk management program development files, see primary 64600.

61300 PROGRAM DELIVERY - GENERAL

Records not shown elsewhere in this section that relate generally to delivering insurance and income protection programs to farmers. The objectives of these programs, managing financial risks to agri-food businesses, are similar but the basis of payment differs. Some programs provide insurance coverage, while others offer benefits (AgriStability and AgriInvest), compensation (Agriculture Wildlife program), grants (Wildlife Damage Mitigation program) or loans (Bred Heifer and Feeder Association Loan Guarantee). All programs may include records relating to the following activities: program enrolment, managing participant information, developing documentation outlining participant and branch responsibilities, fee payments, conducting inspections, and managing the claims/benefits and appeals processes.

This primary includes records relating to delivering and administering ad hoc and smaller business risk management programs, and client files not covered elsewhere in the ORCS.

For AgriStability program delivery, see primary 61400

For federal - provincial agreements, see [ARCS 146-25](#).

For insurance program development records, see primary 61100.

For operational policy, see secondary 61000-00.

For production insurance, compensation, and grants programs, see primary 61500.

For program and product development records, see primary 64600.

For reference material/topical files, see [ARCS secondary 358-20](#).

For the Western Livestock Price Insurance program, see primary 61500.

61400 PROGRAM DELIVERY - BENEFITS MANAGEMENT

Records relating to administering and managing benefits for income protection program participants resulting from a decline in net farming income due to market conditions, production loss, or increased costs of production pursuant to the [Farm Income Protection Act \(SC 1991, c. 22\)](#). Benefit payments are made if a producer's current year margin falls more than a specified amount below the reference margin.

One of these programs is the AgriStability Program, which is administered through the BC Agriculture Risk Network (BARN), the parent name of the Client Relations Management (CRM) and Accounting applications (AX) which manage AgriStability clients relations work flows including enrolments, program eligibility, benefits approvals, and accounting operations; and FARMS (BC Farmer Access to Risk Management System), which calculates participant enrolment fees and provides staff with the ability to calculate, verify, and adjust AgriStability benefits. These applications have been synchronized to share relevant data on participants.

This primary also includes records relating to appeals and adjustment requests, as well as records relating to the AgriInvest program which helps farmers manage small income declines and provides support for investments to mitigate risk or improve market outcomes.

For authorizations/matrices, see [ARCS secondary 265-20](#).

61500 PROGRAM DELIVERY - INSURANCE, COMPENSATION, AND GRANTS PROGRAMS

Records relating to the delivery of insurance coverage to clients and the management of insurance claims resulting from suspected damage to crops due to weather-related perils or an unexpected drop in livestock prices, through programs such as the Production Insurance program and the Western Livestock Price Insurance program.

The Production Insurance program, pursuant to the [Farm Income Insurance Act \(RSBC 1996, c. 130\)](#) and the [Insurance for Crops Act \(RSBC 1996, c. 229\)](#), is supported by the application CIRRAS, which creates and manages grower insurance policy details including coverage, premiums, and payments. It also supports program enrolment, application processing, underwriting, claims tracking, inspections, adjustments, appeals, and payment. The insurance claims process commences when the branch receives the insured's Notice of Loss (NOL). The claims adjudication process involves evaluation, confirmation, substantiation and quantification of the loss by the insurer. The claims process is complete when both parties accept a financial settlement or settlement is determined by binding arbitration.

This primary also covers records relating to compensation requests initiated by producers who have experienced losses to crops or livestock resulting from wildlife damage. The Agriculture Wildlife program (AWP) and its components such as predator compensation, damage to standing forage, and damage to standing grain are compensation programs, which differ from insurance programs in that clients do not pay premiums or enrollment fees. Eligible participants must furnish proof of BC Assessment Farm Status and private land ownership and/or lease confirmation along with a tax reporting number for any potential payments.

For authorizations/matrices, see [ARCS secondary 265-20](#).

For a description of CIRRAS, see the Systems Section.

For federal - provincial agreements, see [ARCS 146-25](#).

For final program reports, see secondary 61000-15.

For issues, see secondary 61000-25.

For operational policy, e.g. the Production Insurance manual, see secondary 61000-00.

64600 PROGRAM AND PRODUCT DEVELOPMENT

Records relating to reviewing and improving existing business risk management programs such as Production Insurance and AgriStability and developing new business risk management programs and products to meet the needs of farming operations. For existing programs, this pertains mainly to Production Insurance where the Province has the flexibility to adapt program design to meet provincial policy objectives. The program area consults extensively with key stakeholders such as industry groups and the federal and provincial governments on the design and performance of business risk management products, and sponsors and manages research and development projects in order to introduce or improve programs/approaches, products and services.

This primary also contains records relating to the assessment and development of AgriRecovery, an ad hoc federal-provincial-territorial (FTP) disaster relief framework designed to help agricultural producers recover from natural disasters or unexpected events such as the avian flu; and AgriRisk Initiatives which encourage partnerships between governments, industry, stakeholders, and the private sector to proactively develop and deliver new risk management products and services (tools).

This primary covers federal government approval submission packages, product development/design case files, and program stakeholders and advisory groups meeting materials. Once stakeholder approval is achieved, the program/product is handed to operations staff for delivery to growers.

For agreements, see [ARCS secondary 146-25](#)

For executive briefing notes, see [ARCS 280-20](#).

For issues not covered in this primary, see secondary 61000-25.

For policy and procedures, see secondary 61000-00.

For policy from external sources, see [ARCS primary 195](#).

For program delivery, see primaries 61300, 61400, and 61500.

For reference material/topical files, see [ARCS secondary 358-20](#).

For travel authorization, see [ARCS primary 1240](#).

64700 REINSURANCE

Records relating to the development, brokering, and analysis of reinsurance. To protect both the Province and its clients, the Production Insurance program signs a reinsurance treaty. The treaty is designed so that if the program is not able to pay out its indemnities, the funds will be paid by the reinsurance companies that participated in the treaty according to the proportion they have subscribed to.

The treaty development process is facilitated by a third party company that is also responsible for marketing the treaty to reinsurance providers.

This primary includes reports, correspondence, and memoranda.

For operational policy, see secondary 61000-00.

For payment reinsurance premiums, see [ARCS 1130-20](#).

For receipt of reinsurance indemnities, see [ARCS 1095-20](#).

For reference material/topical files, see [ARCS secondary 358-20](#).

The ministry OPR is Business Operations, of the Business Risk Management Branch, unless otherwise noted below. See specific secondaries for OPR retention schedules.

64700	REINSURANCE	A	SA	FD
	All non-OPR offices will retain these records for:	SO	nil	DE
-01	General	CY+1y	nil	DE
-20	Approved reinsurance treaties (arrange by program year)	SO+10y	nil	FR
	SO: when the treaty expires			
	10y: The retention period provides a sufficient period of time to ensure all outstanding claims and litigation are resolved and that the reinsurance treaty for the production year is closed.			
	FR: The government archives will fully retain approved reinsurance treaties, one of the core documents of the production insurance program, as they provide evidence of the financial obligation and relationship between the BC government, subscribing reinsurers, and a third party company. The treaties possess evidential, informational, and historical value.			

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This information schedule is approved in accordance with the [Information Management Act \(SBC 2015, c. 27\)](#) and constitutes authority for retention and disposition of the records it covers. Consult your [Records Officer](#).

SYSTEM SECTION: COMMON SYSTEM NOTES

Retention Schedules for the Systems

The data on the systems is classified under appropriate secondaries in the *ORCS* and in *Administrative Records Classification System (ARCS)*, as indicated in the following descriptions. The systems themselves are all scheduled as follows:

Active	SO:	The system becomes superseded and obsolete when all data has been migrated to another system or documented elsewhere, or when all applicable retention schedules for the data have expired; see relevant classifications.
Semi-Active	nil:	There is no semi-active retention period assigned to systems.
Final Disposition	DE:	Each system will be destroyed when all data has been migrated to another system performing the same function, schedules covering the data have elapsed, or the data has been preserved elsewhere. For data retention details, see the applicable system overview.

AGRISTABILITY SYSTEMS

SYSTEM OVERVIEW

Creating Agency

Ministry of Agriculture

Business Risk Management Branch (BRMB)

Purpose

The AgriStability program is administered through two systems: the BC Agriculture Risk Network (BARN), the parent name of the Client Relations Management (CRM) and Accounting applications (AX) which manage AgriStability clients relations work flows including enrolments, program eligibility, benefits approvals, and accounting operations; and FARMS (BC Farmer Access to Risk Management System), which calculates participant enrolment fees and provides staff with the ability to calculate, verify, and adjust AgriStability benefits.

BARN CRM is a customized version of Microsoft Dynamics CRM; BARN AX, is an accounting solution (CITRIX application); and FARMS is a customized application. These applications have been synchronized to share relevant data on participants. BARN CRM and AX communicate with each other. FARMS communicates unidirectionally to BARN.

Information Content

BARN contains participant records (name, participant type, postal code, regional office, municipality, SIN or Business Number), client contact notes, enrolment records, enrolment history records, benefit records, benefit history records, and financial details records. Viewing the enrolment and benefit/benefit approval records for a specific Personal Identification Number (PIN) for any given year can be obtained directly from the participant record. BARN also tracks the approvals of different expense authorities (EAs), client appeals and adjustment requests, and contains a library of articles and speaking notes developed to respond to repeated client inquiries and to deliver program updates.

Documents associated with each record type in BARN can be retrieved through the Associated Documents link to the BARN document repository which resides on the shared drive folder BARN_Documents\AgriStability (arranged by PIN, program year).

The AX component of BARN records payment of enrolment fees by producers and processes AgriStability payments to producers. As financial details are created/updated in AX, they are synchronized to CRM.

FARMS contains Canada Revenue Agency (CRA) income tax data on all participants; final Fair Market Values (FMVs), Benchmark Per Unit Margins (BPUs), and Expense Margins (EM) values; and individual Calculation of Benefits (COB) or the details of the determination of how much financial compensation a participant will receive.

Inputs, Processes, and Outputs

Inputs to BARN CRM include:

- Manually input participant/new participant information, interims, adjustments (form T1275), and appeals using CASE template (log template)

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This information schedule is approved in accordance with the [Information Management Act \(SBC 2015, c. 27\)](#) and constitutes authority for retention and disposition of the records it covers. Consult your [Records Officer](#).

- Data sent from FARMS update applicable records (enrolment fees and benefit calculations amounts)
- When processing enrolment payments received from participants or benefit payments to participants, staff select from open line items to include either enrolment deposit batch or cheque requisition for benefit payments

Inputs to BARN AX include:

- When benefit or enrolment records are created in BARN CRM, data is automatically sent to BARN AX which update applicable participant accounts with enrolment fee and benefit calculation line entries

Inputs to FARMS include:

- Weekly Canada Revenue Agency (CRA) data imports
- Manually input participant tombstone data, tax information, income and expenses, and productive capacity
- Supplementary data submissions (if not included in CRA data import)

Processes:

Program participants provide current tax and program information on the harmonized (T1273 tax plus program) form to the CRA in Winnipeg. This includes Statement A (income and expense data) and supplementary forms (accrual and productive capacity data). The CRA sends this information to Agriculture and AgriFood Canada in Winnipeg who transfer the data to the BC Ministry of Agriculture BRMB head office, Kelowna. The T1273 data is sent electronically via a secure FTP portal. This data, in CSV format, is saved to the program area shared drive and is imported into FARMS for benefit calculations. Hard copy Statement A documentation is sent by fax and mail to BRMB head office, Kelowna and documents are transferred to BARN documents.

Record creation, navigation, and management - Staff manually create and maintain new and existing participant records. When BARN receives participant enrolment fees calculated by FARMS, the system ensures an enrolment record exists for the participant and program year. For existing participants, enrolment records are generated as part of an automatic work flow; for new participants, they are manually created. Staff also manually create enrolment history records for new participants where there are no reference year margins from previous years to draw upon.

Enrolment - The yearly enrolment process may be done in bulk or on an individual basis. Staff consult the previous year's participant list in BARN in order to identify candidates for the upcoming program year. Automatic work flows take the previous year's participant list and create blank enrolment records. Work flows in FARMS calculate the enrolment fees based on the data in FARMS, sending the final calculations to enrolment records in BARN. The associated enrolment record is updated to "enrolment fees calculated" or remains at "not enough information." When BARN receives the enrolment fees and the enrolment record is "enrolment fees calculated", using Microsoft mail merge staff create the enrolment notice, printing and sending a hard copy enrolment notice to participants.

At this point, open line items such as enrolment and administrative cost sharing (ACS) fees waiting for payment are populated in AX. When the participant pays the fees, regional clerks enter payment data in AX, marking items off as received. The enrolment record in BARN then updates to enrolled.

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This information schedule is approved in accordance with the [Information Management Act \(SBC 2015, c. 27\)](#) and constitutes authority for retention and disposition of the records it covers. Consult your [Records Officer](#).

Once BARN has been notified that the enrolment fee has been paid, the benefit record is created in BARN where it remains until tax and supplementary information is received from the program participant.

Benefit calculations - When submission of tax and supplementary information and payment of the enrolment fee is confirmed, the benefit record in BARN is flagged as ready for processing. The verifier enters FARMS to check out the file, which should contain most of the information required to calculate the benefit. If information is missing, the verifier contacts the program participant or his/her accountant and enters this information into FARMS. The verifier then calculates the benefit based on algorithms and business rules programmed in FARMS. When this process is complete, the verifier sets the file scenario in FARMS to verified, commencing the approval work flow in BARN CRM.

Benefit approvals - A benefit is ready for approval when a file scenario in FARMS had been marked as verified. BARN manages the approval work flow and creates the necessary benefit approval records. A work flow will create a benefit approval record for each required level of approval as specified by the branch's approval matrix and assigns the record to the appropriate queue for processing. Work flows update the benefit record in CRM with status changes based on the financial details of the benefit synchronized from AX. If the approver requests an adjustment or review, the benefit calculations process starts again.

Claims administration - When the benefit record is completed and the approvals are done, the file is sent to the Claims Administrator queue. For those benefits with a dollar value, the claims administrator creates a cheque requisition for expense authority (EA) approval in BARN AX. The claims administrator then prepares a package for the participant consisting of the benefit notification letter/statement of account letter, Calculation of Benefits (COB), and related documents. A copy of the COB, statement of account, and cheque requisition are sent to the Ministry of Finance in Victoria for cheque issuance. Front office staff prepare and send a package consisting of a \$0.00 benefit notification/statement of account letter, Calculation of Benefits (COB) and related documents to participants who receive no financial compensation

AX performs the following accounting operations: financial reporting, AX fund 1 tracking, deposit processing and deposit slip printing, payment processing, cheque requisition printing, and financial corrections.

When a producer calls about specific file information, staff must verify their identity prior to releasing program details. Incoming phone calls may be logged by entering a note in the participant record.

Outputs:

Outputs from BARN CRM include the annual AGRI 1 form sent to all participants who receive a dollar benefit value, data required to create statement of account letters for participants using Microsoft mail merge operational reports such as status reports, scheduled monthly/quarterly reports, adhoc reports which can be generated by specific criteria or to identify trends and provide benchmarking, and financial reports such as participant enrolments for the year, benefits paid out, and number of participants who did not pay enrolment fees.

Outputs from BARN AX include cheque requisitions and deposits (DDTD), deposit/payment data, and other financial reports.

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This information schedule is approved in accordance with the [Information Management Act \(SBC 2015, c. 27\)](#) and constitutes authority for retention and disposition of the records it covers. Consult your [Records Officer](#).

Outputs from FARMS include enrolment fees and benefit amounts sent to BARN, the Calculation of Benefits (COB), and extracts and reports for various federal and provincial stakeholders.

The AgriStability and AgriInvest Forecasting Model (AAFM) data extract sent from FARMS to Agriculture Canada for program forecasting purposes is retained on the shared drive until its quality has been verified by the federal government.

Historical Note

Maximizer was a commercial CRM solution used by the Ministry to manage participant information. Maximizer was replaced by Microsoft Dynamics CRM, a more scalable and robust enterprise CRM solution. Data from Maximizer was extracted and imported into Microsoft Dynamics CRM.

Simply Accounting was a commercial small business accounting solution used by the Ministry to record participant fund 1 balances. It was replaced by Microsoft AX. Data from Simply Accounting Ledgers was extracted and imported into Microsoft AX.

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This information schedule is approved in accordance with the [Information Management Act \(SBC 2015, c. 27\)](#) and constitutes authority for retention and disposition of the records it covers. Consult your [Records Officer](#).

END OF OVERVIEW

CROP INSURANCE RISK AND REPORTING ADMINISTRATION SYSTEM (CIRRAS)

SYSTEM OVERVIEW

Creating Agency

Ministry of Agriculture

Business Risk Management Branch (BRMB)

Purpose

CIRRAS is the policy management system that supports the Production Insurance program offered to farmers in BC. It creates and manages grower insurance policy details including coverage, premiums, and payments. It facilitates producer application processing and includes modules on growers, contacts, policies, claims, and inspections.

The system, designed as a web application that runs on top of an Oracle database containing current and historical crop insurance data, was constructed by CGI Information Systems and Management Consultants Inc. using Microsoft's .NET framework and Oracle 9i. Currently it is managed by Vivid Solutions Inc.

The system is a hybrid of uploaded digital records and manually input and scanned hard copy files.

Information Content

CIRRAS contains production insurance policy information such as policy number, grower number, grower legal name, plan name, crop type, policy status, and product purchase status.

Farm production is organized into insurable crop units/farm lot/variety. Farm lot records are children of insurable crop units and commodity sub variety records are children of farm lots.

CIRRAS also contains underwriting data (contract number, crop type, number of acres, number of plants, probable yield per unit, individualized insurable value, grower price index, individual surcharge discounts, insurable value modifier) and financial data (premium rates, minimum premium parameters, premium cost shares, insurable values, adjusting fees, annual plan fee, qualified insurance areas, and governing and subordinate commodity relationships).

Inputs, Processes, and Outputs

Inputs: Staff manually input information on new growers, referred to as producers, into CIRRAS. They also search for data on existing growers, verifying name, address, tax number, and vendor number.

CIRRAS also has utilities to upload data sets of underwriting and financial parameters used to determine coverage and premiums in generation of batch policies. 10 to 15 years of grower farm production data is required to determine coverage and premiums according to an actuarial certified methodology. Some key inputs into CIRRAS are derived by spreadsheet applications. One of these, the claims calculator, calculates the claim amount that is then manually entered into CIRRAS.

Processes:

Underwriting/rollover - Underwriting is currently done outside CIRRAS using Excel spreadsheets – each plan type has its own set of excel sheets which point to specific data files (i.e. Scalecalc for Tree

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This information schedule is approved in accordance with the [Information Management Act \(SBC 2015, c. 27\)](#) and constitutes authority for retention and disposition of the records it covers. Consult your [Records Officer](#).

Fruits, ForData for Forage, etc.). The underwriting process sets the Probable Yield (PY). Growers receive a 6 digit Grower Number which is the identifier of the grower and a 6 digit contract number. The policy number is the contract number plus the last two digits denoting the year that the contract is in place for (i.e. 123456-15). All current policies are underwritten in time to make an offer one month before the start of the next growing season.

Once the underwriting is complete/reviewed and approved it is loaded into CIRRAS along with the premium rates and insurable values. The system looks for existing contract numbers that are an exact match to the data in the upload file. The system also attempts to match and load the following data: plan type, grower legal name, grower number, and commodity type. When a match is found, the PY for that match is loaded. Insurance area, office, and agent name are all fields that are rolled forward each year as part of the tombstone data associated with a given contract number.

If no match is found through the upload process, the agent must enter the data into CIRRAS manually starting with creating a grower number (assuming a brand new grower) or doing a search in CIRRAS to find an existing grower who did not have an active policy. In this later case, CIRRAS locates the contract number(s) associated with the grower and asks the agent if they would like to use the associated contract number or create a new number. The agent decides which number to use, then adds the product purchase(s) in order to create an offer of insurance. Once the necessary data (PY, number of units) have been entered into CIRRAS, the system calculates the premiums, and an offer is generated. All offers are set at minimum (50% deductible) coverage and an options sheet showing the other deductible levels available for purchase is sent to the grower. Once the grower makes the selection(s) a finalized policy is generated. The agent updates CIRRAS with the coverage options selected and CIRRAS re-calculates the new premiums owed. Once the sale is completed and paid for, the agent sets the policy status to active.

Claims processing - CIRRAS tracks the entire claims process. The growers submits the Notice of Loss (NOL) in hard copy or over the phone. Regional support clerks enter the NOL into CIRRAS which generates a receipt of the NOL that is sent to the grower. The claims monitor assigns the NOL to an adjustor who performs their inspection remitting their completed forms and reports. Previously, the grower submitted a Declaration of Production (sometimes used in claims calculation and underwriting in CIRRAS). The claims monitor recommends the claim both in hard copy and in CIRRAS. The regional office scans a copy of the claim into CIRRAS. The hard copy is sent to branch headquarters, Kelowna. The claims manager or delegate approves the hard copy of a claim, also approving it in CIRRAS. The hard copy is sent to the claims administrator.

Claims payment processing - The claims administrator checks the vendor and tax number in CIRRAS, comparing the vendor number to the Corporate Accounting System (CAS), confirms the policy in CIRRAS is active, determines if moneys are owing, and confirms approval of the claim and the correct dollar amount. The claims administrator then creates a cheque requisition in CIRRAS which generates a PDF that is uploaded and adjusted as required. This document is printed and sent to the expense authority (EA). Once approved, the cheque requisition field in CIRRAS is updated from draft to final, generating letters to growers (PDF copies are sent electronically to regional offices, originals to growers, and paper copies are attached to the claim and filed in the claim files). The cheque requisition is scanned, saved on the branch drive, and sent to the Ministry of Finance in Victoria. Hard copy cheque requisitions are given to the program accountant. The client has 30 days from receipt of the letter to appeal the payment decision.

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This information schedule is approved in accordance with the [Information Management Act \(SBC 2015, c. 27\)](#) and constitutes authority for retention and disposition of the records it covers. Consult your [Records Officer](#).

Outputs: In CIRRAS, all reports are generated as Adobe PDF files. Reports include: Statement of Premiums and Coverage, claims letter, contract history, grower fact sheet, mailing labels, status reports (by plan, office, and crop year), and adhoc reports.

Historical Note

CIRRAS replaced Polysys.

OPERATIONAL RECORDS CLASSIFICATION SYSTEM
