1.0 Description of Assessment A			

<sup>&</sup>lt;sup>1</sup> See Provincial Accounts topic box on page 38.

The second quarter fiscal outlook for 2012/13 projects a revised deficit of \$1.5 billion. The \$328 million deterioration since the first *Quarterly Report* is primarily due to the delay in the sale of the Little Mountain property.

Overall revenue is down \$202 million. The impact of the Little Mountain sale delay plus lower income from property transfer tax, natural resources and commercial Crown corporations is partially offset by higher personal and corporate income tax revenue.

Chart 1.1 Operating changes from the first Quarterly Report

Expenditure management results, including ministry savings and prior year liability adjustments, were offset by higher tax credit transfers, additional spending associated with third party funding and other expense increases. As a result, projected overall government spending for 2012/13 is unchanged since the first *Quarterly Report*.

The \$126 million in expenditure management savings plus a \$50 million reduction in the forecast allowance enabled government to achieve \$176 million of the \$241 million needed to manage the impact of natural gas royalty reductions, leaving \$65 million to be found in the remainder of the fiscal year.

Capital spending has increased slightly due to new project approvals and accelerations. Elsewhere in the capital plan, government has achieved \$262 million in reduced spending against the capital plan adjustments identified in the first *Quarterly Report*, leaving \$146 million remaining to be found.

Taxpayer-supported debt is down \$205 million since the first *Quarterly Report*, reflecting lower borrowing for operating purposes. As a result the taxpayer-supported debt to GDP ratio is now 17.0 per cent – a 0.1 percentage point reduction from the previous forecast.

#### Revenue

The 2012/13 revised revenue forecast incorporates year-to-date results for the first six months, updated personal and corporate income tax assessment information from the federal government for 2011 and prior years, and revised forecasts from ministries, the federal government, service delivery agencies and commercial Crown corporations.

Revenue down \$202 million 308 20 (34)(93)(111)(292)Personal Other Natural Other Federal Commercial and Corporate **Taxation** Resources Revenue Crown Income Tax Revenue **Net Income** -primarily -primarily primarily -primarily 2011 tax property coal price delay in sale of assessments impacts transfer tax Little Mountain

Chart 1.2 Main revenue changes from the first *Quarterly Report* 

Revenue in 2012/13 is projected to be \$42.5 billion – \$202 million lower than the first *Quarterly Report* and \$579 million below the *Budget 2012* forecast. The changes from the first *Quarterly Report* reflect lower revenue from natural resources, miscellaneous sources and net income from Crown corporations, partly offset by higher revenue from taxation sources and federal government contributions.

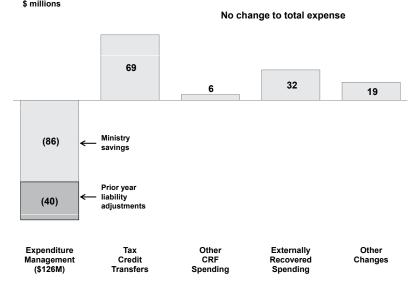

Detailed revenue projections are disclosed in Table 1.7, and key assumptions and sensitivities relating to revenue are provided in Table 1.10. Major changes from the first *Quarterly Report* include:

- Personal income tax revenue is up \$283 million including a \$151 million prior-year adjustment due to higher 2011 tax assessment reports. Higher 2011 tax assessments result in an improved 2012/13 tax base, increasing the forecast by a further \$132 million.
- Corporate income tax revenue is up \$25 million mainly due to stronger 2011 tax assessment results.
- Property tax revenue is down \$13 million mainly reflecting lower 2012 property assessment results.
- Property transfer tax is down \$95 million reflecting the weak housing market in the second quarter. Year to date results indicate annual declines in the average property sale price and the number of transactions.
- Revenue from coal, metals and minerals is down \$93 million mainly due to rising mining costs and weaker coal sales reflecting lower coal prices and shipments.
- Forests revenue is up \$3 million as higher recoveries and stumpage revenue resulting from improved interior stumpage rates and Crown harvest volumes, are partly offset by reduced border taxes collected under the *Softwood Lumber Agreement 2006* and the effects of a higher Canadian dollar.
- Other revenue, comprised of revenue from fees, licenses, investment earnings and other miscellaneous sources, is down \$292 million mainly due to the delay in the completion date of the sale of the Little Mountain property.
- Total federal government contributions are expected to be up \$20 million mainly due to higher direct transfers to taxpayer supported Crown corporations and the SUCH sector.
- The outlook for commercial Crown corporation net income is \$34 million lower than the first *Quarterly Report* and \$90 million lower than budget. The changes from the first *Quarterly Report* mainly reflect a lower allowed return on deemed equity for BC Hydro (the corporation's allowed return is based on the pre-tax return of the closest comparative utility regulated by the BC Utilities Commission), higher claims costs incurred by ICBC, and lower gains from the sale of BC Rail assets.

# Expense

There is no change to overall projected government spending in 2012/13 compared to the forecast in the first *Quarterly Report*, as savings from government's expenditure management initiative were offset by spending increases in other areas.

Chart 1.3 Main expense changes from the first Quarterly Report

# Consolidated Revenue Fund spending

Government's expenditure management initiative has yielded \$86 million in projected ministry savings. As well, a review of accrued liabilities resulted in a \$40 million positive adjustment, mainly due to reduction in insurance liabilities in the Insurance and Risk Management Account.

Tax credit transfers were up \$69 million as a consequence of the improvement in 2011 personal income tax assessments. Other CRF spending changes reflect higher emergency program flood-related and direct fire costs, partially offset by a reduction in debt servicing costs.

#### Contingencies

The notional allocations to the Contingencies vote are unchanged from the first *Quarterly Report*.

Table 1.2 2012/13 Notional Allocations to Contingencies

				Q2
(\$ millions)		First	Second	change
(\$ 1111110113)	Budget	Quarterly	Quarterly	from
	2012	Report	Report	budget
2010 Sports and Arts Legacy	20	20	20	-
Climate Action and clean energy initiatives	40	40	40	-
Community Living BC anticipated caseload increases	12	12	12	-
Elections BC event-related funding	36	15	15	(21)
Subtotal notional allocations	108	87	87	(21)
Reserved for unforeseen pressures related to litigation,				
caseload, natural disasters, and other contingent items	192	213	213	21
Total contingencies	300	300	300	

Government continues to face a variety of pressures over the three years of the plan which ministries and agencies will work to manage within existing budgets, with additional funding provided from the Contingencies vote as necessary.

# Spending recovered from third parties

Spending funded by recoveries from third parties is projected to increase by \$32 million in 2012/13 compared to the first *Quarterly Report*. The changes reflect:

- increased healthcare related cost recoveries (up \$22 million), mainly associated with the medical service plan premiums collections;
- increased spending of gaming proceeds from the BC Lottery Corporation (up \$6 million); and
- increased general government recoveries, including direct fire fighting (up \$4 million).

The above spending changes are offset by an equal increase in revenue, and as a result have no net impact on the fiscal forecast.

#### Operating transfers to service delivery agencies

Operating transfers to service delivery agencies are forecasted to be \$11 million higher in 2012/13 compared to the first *Quarterly Report*.

#### Service delivery agency spending

Service delivery agency spending is forecast to increase by \$30 million in 2012/13 compared to the first *Quarterly Report*.

- School district spending is forecast to be \$4 million higher due to an upward adjustment to estimated salary and benefit costs.
- Post secondary institution spending projections are unchanged from the first *Quarterly Report*.
- Health authority and hospital society spending is forecast to be up \$24 million in 2012/13, reflecting the projected volume increases in the healthcare services delivered by these organizations on behalf of government. This spending increase is projected to be funded by additional provincial grants and own-source revenue.
- Other service delivery agency spending is projected to increase by \$2 million in 2012/13 reflecting mostly higher spending on low income housing.

Detailed expense projections are disclosed in Table 1.8. Key spending assumptions and sensitivities are provided in Table 1.11.

#### Government employment (FTEs)

The projection of government employment for 2012/13 is unchanged from the first *Quarterly Report*. Further details on FTEs are provided in Appendix Table 1.12.

# Provincial capital spending

Total capital spending is projected to be \$7.0 billion in 2012/13 – \$42 million higher than the first *Quarterly Report* but \$152 million lower than budget.

Table 1.3 2012/13 Capital Spending Update

		(\$ millions)	)
2012/13 capital spending – <i>Budget 2012</i> Fiscal Plan (February 21, 2012)	7,103		7,103
2012/13 capital spending – first Quarterly Report (September 13, 2012)		6,909	
	Q1 <u>Update</u>	Q2 <u>Update</u>	Total Changes
Taxpayer-supported changes:			
Project approvals since Budget 2012	91	22	113
Additional externally funded capital spending by post-secondary institutions	53	7	60
Project scheduling changes		(262)	(40)
Capital planning adjustments	(408)	262	(146)
Total taxpayer-supported	(42)	29	(13)
Self-supported changes:			
BC Hydro – mainly scheduling shift on Dawson Creek/Chetwynd and			
Northwest transmission line projects	(165)	-	(165)
Transportation Investment Corp. – timing of capital spending for Port Mann Bridge/Highway 1	20	15	35
Other		(2)	(9)
Total self-supported	(152)	13	(139)
Total changes	(194)	42	(152)
2012/13 capital spending – first Quarterly Report	6,909		
2012/13 capital spending – second Quarterly Report		6,951	6,951

Taxpayer-supported capital spending is projected to be \$3.7 billion – \$29 million higher than the first *Quarterly Report*. The changes include additional allocations for school district and health facility maintenance programs, additional investments in highway rehabilitation programs, and higher than expected spending on self-funded university projects.

The updated forecast also reflects \$262 million in project scheduling changes to meet government's capital planning adjustment target of \$408 million, leaving \$146 million to be realized over the remainder of the fiscal year.

Self-supported capital spending is projected to be \$3.2 billion – \$13 million higher than the first *Quarterly Report* but \$139 million lower than budget. The changes from the first *Quarterly Report* mainly reflects the timing of capital spending on the Port Mann Bridge/Highway 1 project.

Details on capital spending are shown in Table 1.13, and capital spending projects with provincial contributions greater than \$50 million are presented in Table 1.14.

#### Provincial debt

The provincial debt, including a \$100 million forecast allowance, is projected to total \$56.4 billion at March 31, 2013 – \$380 million lower than the projection in the first *Quarterly Report*.

Table 1.4 2012/13 Provincial Debt Update

		(\$ millions)	
2012/13 provincial debt – <i>Budget 2012</i> Fiscal Plan (February 21, 2012)	57,603		57,603
2012/13 provincial debt – first Quarterly Report (September 13, 2012)		56,736	
	Q1	Q2	Total

Taxpayer-supported changes:			
Government operating:		(2)	
- bonus bid cash proceeds	233	(9)	224
- other CRF operating results		(196)	(240)
Total operating debt changes	189	(205)	(16)
Capital debt:	(0.47)		(0.47)
- lower spending in 2011/12	(217) 235	- (171)	(217) 64
- other capital spending impacts		171)	(93)
reduced provincial financing from capital planning adjustments  Tatal posital data changes.	(0.40)		(246)
Total capital debt changes		(205)	
Total taxpayer-supported	(57)	(205)	(262)
Self-supported changes:			
BC Hydro – mainly impact of working capital and lower capital spending projections	(663)	(196)	(859)
Transportation Investment Corporation – impact of working capital changes	(77)	18	(59)
Other changes	(20)	53	33
Total self-supported	(760)	(125)	(885)
Forecast allowance changes:			
Adjustment to forecast allowance	(50)	(50)	(100)
Total changes	(867)	(380)	(1,247)
2012/13 provincial debt – first Quarterly Report	56,736		
2012/13 provincial debt – second Quarterly Report		56,356	56,356

Taxpayer-supported debt is projected at \$38.5 billion – a \$205 million decrease compared to the first *Quarterly Report* projection. The reduction is mainly due to an improved CRF cash position (related to bonus bid proceeds) and lower working capital requirements. The taxpayer-supported debt to GDP ratio forecast is projected to be 17.0 per cent – a 0.1 percentage point improvement from the first *Quarterly Report*.

The projected self-supported debt balance of \$17.8 billion at March 31, 2013 is \$125 million lower than the projection in the first *Quarterly Report*. Increased funding from internal sources has lowered financing requirements for capital infrastructure investments.

Total provincial debt includes a \$100 million borrowing allowance to mirror the operating statement forecast allowance. This allowance is down \$50 million from the first *Quarterly Report* as the risks to the forecast will have a reduced impact midway through the fiscal year.

Details on provincial debt are shown in Table 1.15.

#### Risks to the fiscal forecast

There are a number of risks and pressures to the fiscal plan, including slower than expected economic growth in our trading partners resulting in lower demand for BC's exports, and continuing instability in financial markets brought about by the European sovereign debt crisis.

Revenues in British Columbia can be volatile, largely due to the influence of the cyclical nature of the natural resource sector in the economy. Changes in energy or commodity prices, such as natural gas and lumber, may have a significant effect on revenue and the fiscal forecast.

The spending forecast contained in the fiscal plan is based on ministry and service delivery agency plans and strategies. Changes to planning assumptions, such as utilization or demand rates for government services in the health care, education, or community social services sectors, represent the main spending risks.

These risks are covered by the \$300 million Contingencies vote and the \$100 million forecast allowance.

# Supplementary schedules

The following tables provide the financial results for the six months ended September 30, 2012, and the 2012/13 full-year forecast.

Revenue is recorded on a cash basis. Due to lags in the federal collection and instalment systems, changes to the BC corporate profits and tax base forecasts affect revenue in the succeeding year. The 2012/13 instalments from the federal government reflect 9 months of payments related to the 2012 tax year (paid during Apr-Sept 2012) and one-third of 2013 payments as reflected in the Tax Collection Agreement amended in Summer 2012. Instalments for the 2012 (2013) tax year are based on BC's share of the national tax base for the 2010 (2011) tax year and a forecast of the 2012 (2013) national tax base. BC's share of the 2010 national tax base was 11.8%, based on tax assessments as of December 31, 2011. Cash adjustments for any under/over payments from the federal government in respect of 2011 will be received/paid on March 28, 2013.

		2012/13		Actual
FTEs	Budget	Forecast	Variance	2011/12 2
Ministries and special offices (consolidated revenue fund)	26,891	26,891	-	27,228
Service delivery agencies <sup>3</sup>	4,568	4,568		4,346
Total FTEs	31,459	31,459		31,574

<sup>&</sup>lt;sup>1</sup> Full-time equivalents (FTEs) are a measure of staff employment. FTEs are calculated by dividing the total hours of employment paid for in a given period by the number of hours an individual, full-time person would normally work in that period. This does not equate to the physical number of employees. For example, two half-time employees would equal one FTE, or alternatively, three FTEs may represent two full-time employees who have worked sufficient overtime hours to equal an additional FTE.

<sup>&</sup>lt;sup>1</sup> Only projects that receive provincial funding and have been approved by Treasury Board and/or Crown corporation boards are included in this table. Ministry service plans may include projects that still require final approval. Capital costs reflect current government accounting policy.

<sup>&</sup>lt;sup>2</sup> Assets have been put into service and only trailing costs remain.

<sup>&</sup>lt;sup>3</sup> Figures shown are based on preliminary Treasury Board approvals. These amounts will change after P3 contracts are finalized.

<sup>&</sup>lt;sup>4</sup> Figures shown do not include a \$50 million capital reserve for future oil and gas access road development in the Northern Rockies area.

<sup>&</sup>lt;sup>5</sup> The e-Health initiative is comprised of 7 distinct projects. Figures shown reflect the total costs of the Ministry of Health's 7 provincially co-ordinated e-Health projects. The federal government portion is an estimate based on a signed agreement with Canada Health Infoway and the actual amount may vary, depending on eligible project costs incurred.

<sup>&</sup>lt;sup>6</sup> BC Hydro has revised total capital costs for projects to conform with International Financial Reporting Standards.

<sup>&</sup>lt;sup>7</sup> Total costs and completion dates for these projects vary depending on the final scope. Information shown represents current assumptions.

<sup>&</sup>lt;sup>8</sup> Joint ventures of the Columbia Power Corporation and Columbia Basin Trust. In October 2010, CPC/CBT reached an agreement for a partnership with Fortis Inc. to develop an electricity generating facility at the Waneta Dam south of Trail. Capital spending information reflects 49 per cent of the total project – CPC's 32.5 per cent share combined with CBT's 16.5 per cent share.

<sup>&</sup>lt;sup>1</sup> Debt is after deduction of sinking funds and unamortized discounts, and excludes accrued interest. Government direct and fiscal agency accrued interest is reported in the government's accounts as an accounts payable.

<sup>&</sup>lt;sup>2</sup> Includes debt and guarantees incurred by the government on behalf of school districts, universities, colleges and health authorities/hospital societies (SUCH), and debt directly incurred by these entities.

<sup>&</sup>lt;sup>3</sup> Health facilities' debt includes public-private partnership obligations of \$952 million for the six months ended September 30, 2011, \$1,011 million for the six months ended September 30, 2012, \$995 million for fiscal 2011/12 and \$1,117 million for fiscal 2012/13.

<sup>&</sup>lt;sup>4</sup> BC Transportation Financing Authority debt includes public-private partnership obligations of \$863 million for the six months ended September 30, 2011, \$926 million for the six months ended September 30, 2012, \$890 million for fiscal 2011/12 and \$956 million for fiscal 2012/13.

<sup>&</sup>lt;sup>5</sup> Includes the BC Housing Management Commission and the Provincial Rental Housing Corporation.

<sup>&</sup>lt;sup>6</sup> Includes service delivery agencies, student loan guarantees, loan guarantees to agricultural producers, guarantees issued under economic development and home mortgage assistance programs and loan guarantee provisions.

<sup>&</sup>lt;sup>7</sup> Joint ventures of the Columbia Power Corporation and Columbia Basin Trust.

# PART TWO — ECONOMIC REVIEW AND OUTLOOK 1

# 2012/13 Second Quarterly Report

November 28, 2012

# Summary

- Since *Budget 2012*, the Economic Forecast Council has lowered its outlook for British Columbia in both 2012 and 2013. The Council now pegs BC's annual real GDP growth at 2.1 per cent in 2012 and 2.2 per cent in 2013, lower than its *Budget 2012* projections of 2.2 per cent in 2012 and 2.5 per cent in 2013.
- In the first *Quarterly Report*, the Ministry of Finance forecast BC's real GDP to grow by 2.0 per cent in 2012 and 1.8 per cent in 2013. These projections remain prudent relative to the recent Economic Forecast Council outlook for BC in 2012 and 2013.
- Data for the current year indicate improvement on several of BC's economic indicators compared to 2011, but activity on some indicators has slowed in recent months.
- Downside risks to BC's economic outlook include a return to recession in the US economy, slowing Asian demand and the ongoing sovereign debt crisis in Europe. Additional risks include a fluctuating Canadian dollar and continued volatility in global financial and commodity markets.

# BC Outlook - Economic Forecast Council Projections

Sources: Ministry of Finance and Economic Forecast Council

In preparation for *Budget 2013*, the Minister of Finance met with members of the independent Economic Forecast Council in November 2012 to obtain their views on the economic outlook. The Council downgraded its forecast for BC's economic growth since it was last surveyed in January 2012. The Council now estimates BC's real GDP growth at 2.1 per cent in 2012 and 2.2 per cent in 2013. This is lower than its January forecast of 2.2 per cent in 2012 and 2.5 per cent in 2013. This downward revision reflects increased risks to the economic outlook, mainly due to external factors such as the weak US recovery, the European debt crisis and slowing Asian demand. The Ministry

<sup>&</sup>lt;sup>1</sup> Reflects information available as of November 22, 2012.

will consider advice received from the Council when preparing its updated economic forecast, which will be presented in *Budget 2013* along with a full report on the results of the annual Economic Forecast Council meeting.

The Ministry's most recent forecast occurred in the first *Quarterly Report*, released September 13, 2012. In the report, the Ministry forecast BC's real GDP to grow by 2.0 per cent in 2012 and 1.8 per cent in 2013. These projections remain prudent relative to the recent Economic Forecast Council projections for BC in 2012 and 2013.

# **British Columbia Economic Activity**

Indicators of BC's economic performance so far in 2012 reveal improvement in provincial economic activity compared to the same period in 2011. However, Table 2.1 shows quarterly declines in several key sectors of the provincial economy during the most recent quarter of this year.

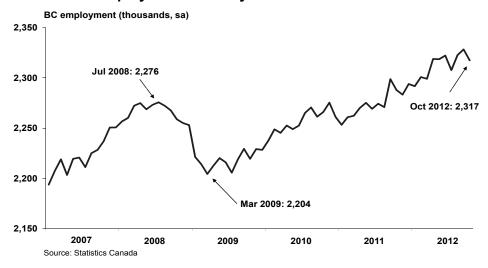

Table 2.1 British Columbia Economic Indicators

	Apr. to Jun. 2012 change from	Jul. to Sep. 2012 change from	Year-to-Date Jan. to Sep. 2012 change from
All data seasonally adjusted	Jan. to Mar. 2012	Apr. to Jun. 2012	Jan. to Sep. 2011
		Per cent change	
Employment	+1.0	0.0	+1.8
Manufacturing shipments	+0.3	+0.5	+0.8
Exports	-2.0	-1.9	-2.7
Retail sales	-0.4	-0.7	+3.2
Housing starts	+7.4	-2.8	+8.8
Non-residential building permits	+5.4	+9.4	+37.4

#### Labour market

Employment in BC improved through the first ten months of 2012, as year-to-date data show a 1.8 per cent gain relative to the same period last year. This increase translates to 40,400 more jobs, with a gain of 52,800 in full-time employment offsetting a loss of 12,300 part-time jobs.

Chart 2.2 BC employment recovery continues

Significant year-to-date job gains were observed in manufacturing (+11.8 per cent), health care and social assistance (+7.5 per cent) and educational services (+5.0 per cent). Improvements in these industries helped to offset major job losses in public administration (-7.9 per cent), accommodation and food services (-6.5 per cent) and construction (-5.8 per cent).

The provincial unemployment rate averaged 6.8 per cent year-to-date to October, 0.8 percentage points below its average during the same period in 2011. Meanwhile, BC's labour force grew by 1.0 per cent relative to the first ten months of last year.

#### Consumer spending and housing

Retail sales advanced 3.2 per cent year-to-date to September 2012, due to significant increases in sales at clothing and accessories stores and at auto dealerships. BC's rate of retail sales growth through the first nine months of this year placed it fifth among provinces and slightly higher than the national average rate of 3.1 per cent.

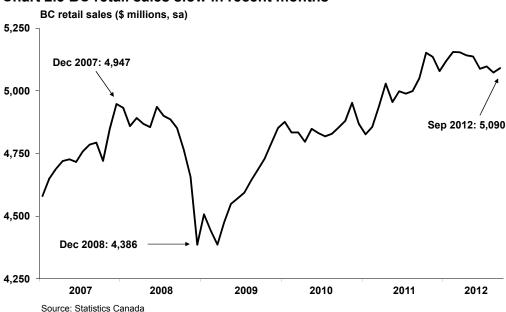

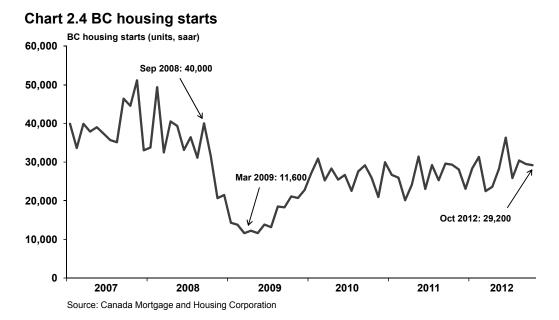

Chart 2.3 BC retail sales slow in recent months

Housing starts in BC were fairly strong through the first ten months of 2012, after trending flat in 2011. Despite losing some momentum in the most recent quarter, housing starts improved by 7.7 per cent year-to-date to October. Further, residential building permits (a precursor of new housing activity) rose by 15.2 per cent year-to-date to September.

MLS home sales in BC softened through the first ten months of 2012, falling by 10.4 per cent compared to the same period last year. At the same time, the average MLS home price in BC was around \$518,700, a drop of 8.2 per cent year-to-date to October compared to the same period in 2011. The moderation in prices among BC homes comes after a hefty annual average price increase of 11.1 per cent in 2011 (with last year's price jump partly due to a small number of very expensive home sales in tony areas of Vancouver). However, stricter mortgage rules recently introduced by the federal government have likely added some downward pressure to housing activity in the province.

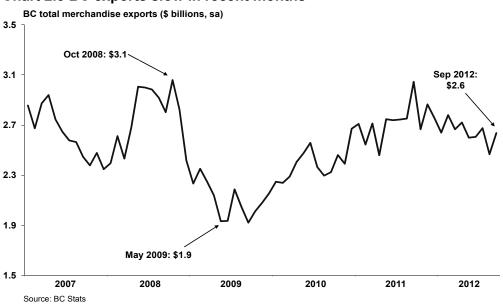

The value of total non-residential building permits rose 37.4 per cent through the first nine months of 2012 relative to the same period last year. Sizeable gains were observed in all categories of permits, including industrial (+160.7 per cent), institutional and government (+34.3 per cent) and commercial (+19.0 per cent).

# External trade and commodity markets

The value of BC's merchandise exports fell by 2.7 per cent year-to-date to September 2012 compared to the same period last year. Substantial declines were fuelled by losses in exports of energy products (-13.7 per cent) and metallic and non-metallic mineral products (-12.9 per cent). The substantial decrease in energy exports was due to year-to-date declines in the values of natural gas exports (-26.6 per cent), coal exports (-14.7 per cent) and electricity exports (-12.5 per cent). These losses offset year-to-date export gains in such sectors as industrial machinery, equipment and parts (+19.9 per cent) and farm, fishing and intermediate food products (+6.3 per cent).

Shipments of manufactured goods from BC were modest through the first nine months of 2012, up 0.8 per cent compared to the same period a year ago. Notable gains were recorded in shipments of transportation equipment (+33.5 per cent), machinery (+10.5 per cent) and non-metallic mineral products (+7.1 per cent), which worked to offset losses in sectors such as paper (-12.3 per cent) and primary metals (-6.5 per cent).

Although prices for most commodities have recovered since falling sharply in the 2008/09 recession, they are expected to remain volatile in the near-term due to ongoing global economic uncertainty (and the potential for further slowing of the Chinese economy).

The monthly lumber price began 2012 at \$254 US/000 board feet in January and improved fairly steadily through the year to reach \$310 US/000 board feet in August. The price fell slightly over the last two months, reaching \$299 US/000 board feet in October. Year-to-date to October, the price of lumber averaged \$289 US/000 board feet—an increase of 11.8 per cent compared to the first ten months of 2011. Recent positive data from the US housing market is likely having an upward effect on the lumber price, as more new homes are now under construction in the US than a year ago.

In contrast, the monthly price of pulp fell fairly steadily since reaching a record high in mid-2011 (\$1,016 US per tonne), and arrived at \$774 US per tonne in October 2012. Year-to-date to October, the price of pulp averaged \$817 US per tonne, which is a sizeable drop of 16.5 per cent compared to the same period last year.

The price of oil was fairly high through the first ten months of this year, with the West Texas Intermediate (WTI) daily oil price averaging \$95.39 US per barrel year-to-date to October. This represents a slight increase of 1.2 per cent compared to the same period in 2011. The daily oil price reached as high as \$109.39 in February, retreating as low as \$77.72 in June, and climbing again up to \$98.94 in September. Meanwhile, the price of natural gas has hovered around historically low levels since early-2010. Plant Inlet prices averaged just \$1.21 C/GJ year-to-date to October – a considerable drop from \$2.54 C/GJ observed over the same period a year ago.

#### Risks to the Outlook

Risks to British Columbia's economic outlook are largely weighted to the downside. The most significant risks to the current outlook include:

- a return to recession in the US economy (characterized by weaker consumer spending; further deleveraging causing slower investment; continued weakness in the housing sector; a very slow job market recovery; further fiscal restraint by federal, state and local governments; and potential fallout from the looming fiscal cliff);
- the European sovereign debt crisis now posing significant problems in large economies like Italy and Spain threatening the stability of global financial markets;
- slower than anticipated Asian demand resulting in weaker demand for BC's exports;
- further appreciation of the Canadian dollar; and
- further weakening of the US dollar resulting in significant disruptions to global financial and commodity markets.

#### **External Environment**

#### United States

The slow pace of the US economic recovery continued through the first three quarters of 2012, as the weak labour market, sluggish business investment and concerns over the upcoming federal fiscal cliff (where current federal legislation dictates that large tax increases and spending cuts will take effect at the start of 2013, unless a stalled US Congress takes action to halt these changes) continued to dampen the pace of real GDP growth.

This long recovery period, following the housing collapse and ensuing financial crisis that began in late 2008, is likely to continue for several years. This is consistent with economic behaviour in a balance sheet recession – where the collapse of a large asset bubble is followed by at least a decade of weak activity and high unemployment.

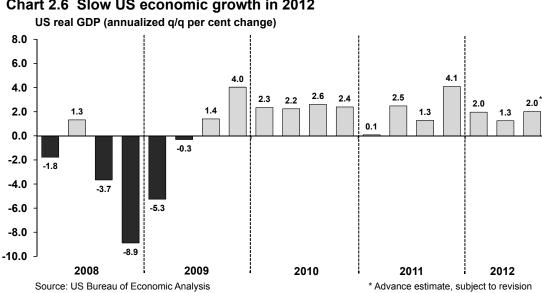

Chart 2.6 Slow US economic growth in 2012

US real GDP grew modestly through the first three quarters of 2012, expanding at a 2.0 per cent annualized rate in the January to March quarter, followed by a 1.3 per cent increase in the April to June quarter and then a 2.0 per cent gain in the July to September period. Growth in the most recent quarter was led by government and consumer spending, residential investment and a slight drop in imports. These improvements helped to offset slower non-residential investment and exports. Private sector analysts point out that US businesses remain reluctant to hire and invest due to several factors including elevated fuel prices, growing uncertainty over the ongoing European economic crisis, and the looming federal fiscal cliff.

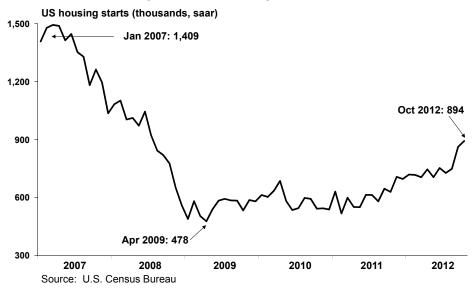

The US employment situation remains deeply troubled, with 4.3 million jobs lost since the January 2008 peak (a decline of 3.1 per cent). Although the monthly unemployment rate has gradually fallen since peaking at 10.0 per cent in October 2009, the rate still sat at a relatively high 7.9 per cent as of October 2012. Positive monthly job gains were

observed through the first ten months of 2012, at a pace of about 156,900 jobs per month. Year-to-date to October, US employment increased by 1.4 per cent, or 1.9 million jobs, compared to the same period in 2011. The majority of these year-to-date gains occurred in service industries, which added 1.6 million jobs, while goods-producing industries improved by about 310,000 jobs.

The American housing market showed signs of a nascent recovery through the first ten months of 2012. After a very weak 2011, US housing starts averaged 758,600 annualized units year-to-date to October 2012 and reached a monthly average of 894,000 annualized units in October (a four-year high). This represents a 27.7 per cent increase compared to the same period last year, but is still less than half of the level observed during the height of the housing boom in early 2006. Private sector economists explain that the stabilization of housing prices, historically low mortgage rates and demographic factors such as growing household formation will likely continue to support increases in residential construction.

At the same time, existing home sales in the US have improved by 8.2 per cent year-to-date to October compared to the same period in 2011. Sales reached 4.79 million annualized units in October 2012, down slightly from the two-year high of 4.83 million recorded in August. However, private sector analysts point out that the foreclosure inventory still looms large in many US states. This, in combination with modest job creation and a legacy of bad credit history for many Americans could work to provide a protracted recovery for the US housing market.

#### Chart 2.7 US housing starts improving

Forecasts for US economic growth in 2012 have held steady since the beginning of this year. The November 2012 *Consensus Economics* survey projects modest growth of 2.2 per cent for 2012, the same rate of increase expected in January of this year. However, *Consensus* forecasters have downgraded their average US forecast for 2013

considerably since January 2012. The November *Consensus* projects US real GDP growth to be 1.9 per cent next year, down from the 2.5 per cent increase forecast in January 2012. As reasons for lowering their outlooks, *Consensus* analysts cite waning global economic growth, shaky domestic demand, the severity of the recent drought in several US states and concerns over the upcoming fiscal cliff.

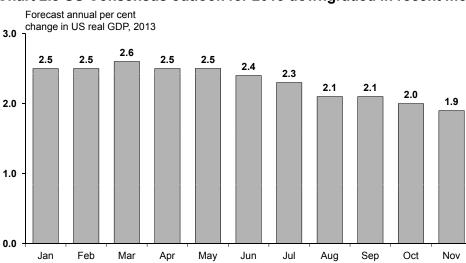

Chart 2.8 US Consensus outlook for 2013 downgraded in recent months

Source: Consensus Economics

2012

The chart above represents forecasts for real GDP growth in 2013 as polled on specific dates. For example, forecasters surveyed on January 9, 2012 had an average 2013 US growth forecast of 2.5 per cent, while on November 12, 2012 they forecast 2013 US growth at 1.9 per cent.

#### Canada

Facing strong headwinds from a slowing global economy, the Canadian economy recorded modest increases in several major indicators relative to 2011. Overall, Canada's real GDP increased by an annualized rate of 1.8 per cent in both the January to March and April to June quarters of this year. Gains in business investment and personal consumption during the April to June quarter worked to offset declines in government spending and net exports during this period.

After a 1.6 per cent annual gain in 2011, Canadian employment improved by 176,400 jobs (or 1.0 per cent) year-to-date to October 2012 compared to the same period a year ago. Through the first ten months of 2012, the national unemployment rate averaged 7.3 per cent, falling 0.1 percentage points compared to same period in 2011. Also domestically, the national retail and housing markets showed solid gains compared to last year. Canadian retail sales increased by 3.1 per cent year-to-date to September 2012, while housing starts advanced 12.8 per cent year-to-date to October to average 218,100 annualized units.

Despite slowing global demand and a high currency, Canada's trade sector made significant gains year-to-date to September compared to the same period in 2011. The value of Canadian merchandise exports rose by 3.8 per cent year-to-date to

September compared to the first nine months of last year, boosted by improvements in exports of energy (largely due to a 13.3 per cent increase in oil exports), automotive goods and machinery and equipment. Despite the strength in Canadian exports through 2012 relative to last year, sluggish demand from a slowing world economy resulted in a 4.5 per cent decline for this indicator during the July to September quarter compared to the April to June quarter. In addition, shipments of Canadian manufactured goods also improved over last year, as their total value climbed by 5.0 per cent year-to-date to September.

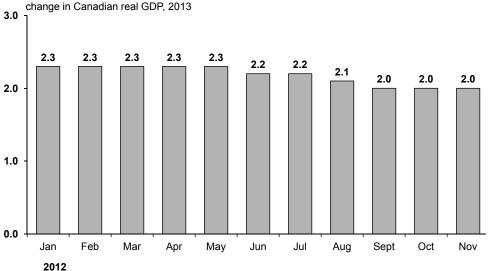

The most immediate threats to Canadian economic growth stem from international markets: slowing demand from Asian nations, further weakness in the US (including the upcoming fiscal cliff) and the looming threat of a global financial market shock being sparked by one or more sovereign debt defaults in Europe. If the European situation continues to deteriorate, the economies of the US and several Asian countries could face significant downward pressure due to their strong trade connections with Europe. As a result, Canada could see considerable weakening in its exports due its trade connections with the US and Asia.

Acknowledging the considerable risks to Canadian economic growth going forward, Federal Finance Minister Jim Flaherty recently lowered the federal government's assumptions for Canada's near-term GDP growth. This downgrade to federal nominal GDP growth projections in 2012 and 2013 resulted in larger than expected deficits in the coming years than were forecast earlier in 2012. As such, Minister Flaherty has pushed out his target fiscal year for returning to a budget surplus to 2016/17 from the previous target of 2015/16.

Private sector economists have held their average forecast fairly steady for the Canadian economy in 2012, with the November *Consensus* expecting Canada's real GDP to grow by 2.0 per cent – the same rate forecast in January.

Chart 2.9 Consensus projects modest Canadian growth in 2013

Forecast annual per cent change in Canadian real GDP, 2013

Source: Consensus Economics

The chart above represents forecasts for real GDP growth in 2013 as polled on specific dates. For example, forecasters surveyed on January 9, 2012 had an average 2013 Canadian growth forecast of 2.3 per cent, while on November 12, 2012 they forecast 2013 Canadian growth at 2.0 per cent.

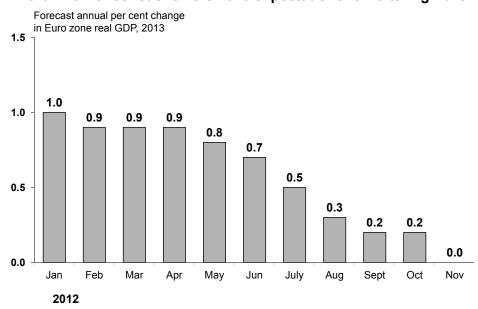

However, *Consensus* expectations for the Canadian economy in 2013 have been lowered in recent months. The November *Consensus* now projects Canadian growth of 2.0 per cent next year, down from the 2.3 per cent forecast in January 2012. *Consensus* economists cite the upcoming US fiscal cliff as a major risk to Canadian economic growth in 2013.

# Europe

The ongoing European sovereign debt crisis presents a large and immediate threat to the global economic outlook. In the July to September quarter, euro zone GDP shrank by 0.6 per cent compared to same quarter in 2011. The economies of member nations Greece, Italy, Spain and Portugal contracted sharply during the third quarter, while growth continued to slow in Germany. As several heavily indebted European nations now implement severe austerity measures to tackle massive deficits, violent protests and social unrest are becoming frequent occurrences within the populations of these struggling countries.

Greece's economy had the most severe downturn of all euro zone members in the July to September quarter, shrinking by 7.2 per cent compared to the same quarter a year ago. This large decline followed year-over-year contractions of 6.3 per cent in the second quarter and 6.7 per cent in the first quarter. In early November, the Greek government passed a new austerity bill, which will further cut salaries and pensions and increase taxes. Greece's leaders hope these measures will persuade the nation's international creditors to release the next €31.5 billion installment of much needed bailout loans. Analysts suggest that with the Greek economy headed for a sixth straight year of contraction and more than one quarter of the country's workers unemployed, additional austerity will likely worsen Greece's economic situation and further impoverish the country.

Chart 2.10 Consensus lowers 2013 expectations for faltering Euro zone

Source: Consensus Economics

The chart above represents forecasts for real GDP growth in 2013 as polled on specific dates. For example, forecasters surveyed on January 9, 2012 had an average 2013 Euro zone growth forecast of 1.0 per cent, while on November 12, 2012 they forecast 2013 Euro zone growth at 0.0 per cent (or no growth).

The deeply troubled Spanish economy continued to contract during the July to September period, falling 1.6 per cent compared to the same quarter in 2011. Meanwhile, the country's employment situation continues to deteriorate (the unemployment rate reached 25.8 per cent in September) at a time when the Spanish government is debating whether to seek international aid to alleviate some of its massive debt troubles. The government recently introduced highly unpopular spending cuts and tax increases in an attempt to reduce the nation's deficit, but critics argue that these measures will only result in higher unemployment and reduced economic activity.

With the euro zone now in recession, private sector forecasters have continued to lower their projections for euro zone real GDP growth in both 2012 and 2013. As such, the November *Consensus* pegs euro zone real GDP to contract by 0.5 per cent this year, followed by 0.0 per cent growth (or no growth) in 2013.

#### China

With Europe in recession and the US economy mired in a very slow recovery, China now stands as the world's most important engine of growth. However, the rapidly expanding Chinese economy has shown signs of cooling in recent months. China's real GDP increased by 7.4 per cent in the July to September quarter of 2012 compared to the same period in 2011. Although industrial output, retail sales, exports and fixed asset investments saw improvement in September, these monthly gains were insufficient to offset the loss of economic momentum observed in July and August. Waning demand from several struggling European economies is now taking its toll on China's industrial production, which could soon prompt the Chinese government to deploy both monetary easing and fiscal spending to prop up economic growth.

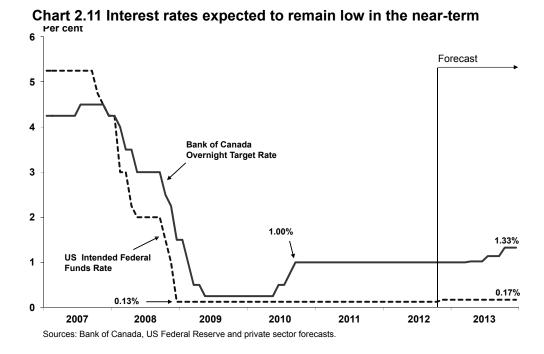

The November 2012 *Consensus* forecasts China's real GDP to expand by 7.7 per cent in 2012 and 8.1 per cent in 2013. As the Chinese economy is slowing somewhat from the rapid expansion it experienced in recent years, whether or not a soft landing occurs after the current slowdown will have significant implications for the stability of world financial markets and for the economic well-being of China's trading partners.

#### Financial markets

#### Interest rates

At its most recent meeting in October 2012, the Bank of Canada announced that it will continue to hold its target for the overnight rate at 1.00 per cent (where the rate has remained since September 2010). Bank officials cited the gradual US recovery, the European recession and slowing economic growth in China and other emerging economies (despite recent signs of stabilization) as reasons for maintaining the rate at 1.00 per cent. Most private sector forecasters expect the Bank to postpone tightening monetary policy until the second half of 2013.

The US Federal Reserve has held its intended federal funds rate in the 0.00 to 0.25 per cent range since December 2008. At its October 2012 meeting, the Fed cited strained global financial markets and slow employment growth as factors behind its decision to hold the rate in this range. However, the Fed also noted that the US housing sector has recently shown signs of improvement, albeit from a depressed level. The Fed recently announced that it will keep the fed funds rate at its current level until mid-2015. As such, private sector economists anticipate that the rate will remain in the 0.00 to 0.25 per cent range for the next few years.

The average of private sector forecasters' views on Canadian short-term interest rates (three-month Treasury bills) as of October 22, 2012 indicates that three-month rates will average 1.0 per cent in 2012 and 1.2 per cent in 2013. The same forecasters project ten-year Government of Canada bonds to average 1.9 per cent in 2012 and 2.1 per cent in 2013.

**Table 2.2 Private Sector Canadian Interest Rate Forecasts** 

	3-month T	3-month Treasury Bill		10-year Government Bond	
Average annual interest rate (per cent)	2012	2013	2012	2013

TD Economics	1.0	1.3	1.9	2.2	
RBC Capital Markets	1.0	1.5	1.9	2.2	
Average (as of October 22, 2012)	1.0	1.2	1.9	2.1	

#### Exchange rate

The Canadian dollar began 2012 just below parity with the US dollar and remained near parity through the first ten months of the year. The loonie reached as high as 103.0 US cents in September, largely due to weakness in the US dollar. As of November 22, 2012, the loonie was valued slightly above parity with the US dollar, at 100.3 US cents.

# **Provincial Economic Accounts Update**

Statistics Canada released its estimates of provincial GDP for 2011 on November 19, 2012.

Periodically, the provincial and territorial economic accounts undergo historical revisions, which are much broader in scope than the regular revisions undertaken on an annual basis. These historical revisions are reserved for incorporating updated international accounting standards, as well as conceptual, classification, presentational and major statistical changes. The November 19 revision includes major changes to the provincial and territorial expenditure and income accounts. The latest revisions date back to 2007; revisions dating back to 1981 will be released in 2013.

Some of these conceptual changes involve providing more disaggregation of existing information, while other changes involve the inclusion of new categories that were not previously being captured in the data. For example:

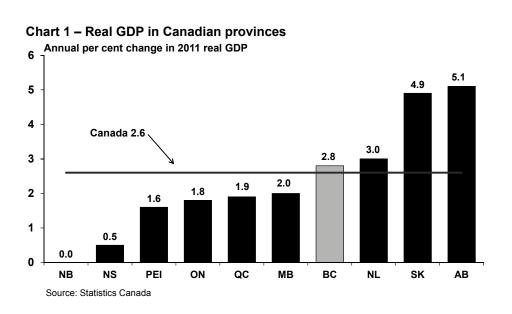

• familiar terms such as corporate profits, labour income and personal expenditures, will no longer appear in Statistics Canada text or tables, and instead, the revisions will add new variables and concepts, such as compensation of employees, gross operating surplus, gross mixed income and household final consumption expenditure.

- the corporate sector will be split so that transactions of non-financial corporations will be identified separately from those of financial corporations.
- non-profit institutions serving households and Aboriginal general governments will be articulated as separate sectors.
- an additional investment category called intellectual property products is being added that includes investment made by businesses in the area of research and development, software and mineral exploration.

Full details on these revisions are available on the Statistics Canada website <a href="http://www.statcan.gc.ca/nea-cen/hr2012-rh2012/start-debut-eng.htm">http://www.statcan.gc.ca/nea-cen/hr2012-rh2012/start-debut-eng.htm</a>

#### Latest BC Data

British Columbia's real GDP expanded by 2.8 per cent in 2011, following a 3.2 per cent increase the previous year. BC registered the fourth strongest growth rate among provinces last year, behind Alberta (5.1 per cent), Saskatchewan (4.9 per cent) and Newfoundland and Labrador (3.0 per cent). Overall, Canadian real GDP rose 2.6 per cent in 2011.

Contributing to BC's 2.8 per cent increase in real GDP was a 9.3 per cent increase in business investment, driven by strong gains in the non-residential structures and machinery and equipment categories. Meanwhile, the pace of consumer spending slowed last year to reach 2.2 per cent, after a 3.3 per cent gain in 2010. In 2011, the volume of BC's exports of goods and services to other countries and provinces advanced 4.9 per cent due to notable gains in exports of commodities such as lumber, pulp, copper and coal. At the same time, government spending (federal, provincial, local and Aboriginal) on goods and services grew by 1.2 per cent (down from 2.2 per cent growth in 2010). Meanwhile, real imports of goods and services rose by 6.6 per cent (following a 9.7 per cent gain in 2010).

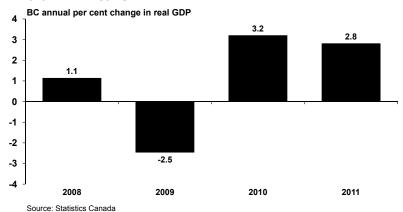

#### Real GDP

Chart 2 shows the annual growth in BC's real GDP from 2008 to 2011. The most recent year saw the pace of BC's economic growth slow somewhat, after registering a 3.2 per cent increase in 2010.

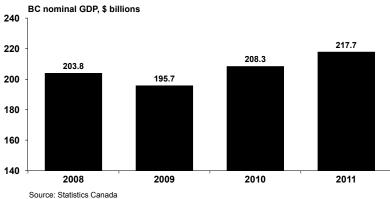

#### Nominal GDP

The level of BC's nominal GDP in 2008, 2009, 2010 and 2011 are presented in Chart 3. The recently released data reveal a nominal GDP increase of \$9.5 billion (or 4.5 per cent) in 2011, following a \$12.6 billion (or 6.5 per cent) gain during in the previous year. Following the latest revisions to nominal GDP, the BC government's debt to GDP ratio is now 15.9 per cent in 2011/12, lower than the 16.2 per cent noted in the first *Quarterly Report*.
