

Unregulated Drug Deaths- Summary

2024 Summary

- There were 152 and 147 suspected unregulated drug deaths in November and December 2024, respectively. Note: Data are preliminary and subject to change as investigations are concluded.
- The number of unregulated drug deaths in November and December 2024 equates to about 5.1 and 4.7 deaths per day, respectively.
- Preliminary observations show a decrease in deaths within Interior, Island, and Northern Health in November and December 2024. Deaths among 19-29 year-olds have also seen significant declines during the same period.
- The cumulative number of unregulated drug deaths in 2024 is 2253. This represents a 13% decrease from the number of deaths in 2023 (2578). The rate of death in 2024 is 40 per 100,000 persons, which is less than the annual rates in any of the previous three years (2021-2023).
- In 2024, 70% of those dying were aged 30 to 59, and 74% were male. Please visit this [link](#) to view a report on youth drug toxicity deaths.
- The rate of female deaths have steadily increased since the start of the public health emergency in 2016. In 2024, the rate of death among females (20 deaths per 100,000 population) is over 50% higher than the rate from 2020 (13 per 100,000). Female death rates are highest in Northern (45 per 100,000) and Island (25 per 100,000) Health Authority.
- By Health Authority, in 2024, the highest number of unregulated drug deaths were in Fraser and Vancouver Coastal Health Authorities (610 and 601 deaths, respectively), making up 54% of all such deaths during 2024. The highest rates were in Northern Health (67 deaths per 100,000 individuals) and Island Health (48 per 100,000).
- By Health Service Delivery Area (HSDA), in 2024, the highest rates were in Northern Interior, North Vancouver Island, Vancouver, Northwest, and Central Vancouver Island.
- By Local Health Area, in 2024, the highest rates were in Vancouver - Centre North, Lillooet, Greater Campbell River, Terrace, Prince George.
- In 2024, 81% of unregulated drug deaths occurred inside (48% in private residences and 33% in other inside residences including social and supportive housing, SROs, shelters, and hotels and other indoor locations) and 19% occurred outside in vehicles, sidewalks, streets, parks, etc.
- Smoking was the most common mode of consumption in 2024 with 67% showing evidence of smoking followed by nasal insufflation (13%), injection (11%), and oral (5%).
- In 2024, fentanyl was detected in 78%, cocaine in 52%, fluorofentanyl in 46%, methamphetamine in 43%, bromazolam in 41%, and hydromorphone in 3% of unregulated drug deaths that have undergone expedited toxicology testing.

Notes: *Blank cells indicate suppressed data. Data last updated to **Dec 2024**. Data will be updated for the April, August, and December update. Data prepared by BC Centre for Disease Control (BCCDC). For additional graphics and data preparation notes including suppression guidelines, please visit the BCCDC website ([Unregulated Drug Poisoning Emergency Dashboard \(bccdc.ca\)](https://www.bccdc.ca)). Due to small numbers of deaths and population sizes in some LHAs, rates may be unstable and need to be interpreted with caution.

Unregulated Drug Deaths by Place of Injury, BC, 2021-2024

Place of Injury	2021		2022		2023		2024	
	Number	Percent	Number	Percent	Number	Percent	Number	Percent
Private Residence	1282	55.9%	1298	54.5%	1217	47.2%	1075	47.7%
Other Residence	573	25.0%	569	23.9%	724	28.1%	641	28.5%
Outside	341	14.9%	366	15.4%	489	19.0%	417	18.5%
Public Building: Other	33	1.4%	60	2.5%	68	2.6%	56	2.5%
Not available	26	1.1%	31	1.3%	21	0.8%	16	0.7%
Public Building: Washroom	13	0.6%	28	1.2%	22	0.9%	17	0.8%
Medical Facility	8	0.3%	8	0.3%	17	0.7%	15	0.7%
Industrial/Construction/Manufacturing/ Natural Resource Sites	9	0.4%	11	0.5%	13	0.5%	9	0.4%
Correctional Facility/Police Cell	8	0.3%	12	0.5%	7	0.3%	7	0.3%
Total	2293	100.0%	2383	100.0%	2578	100.0%	2253	100.0%

Notes:

Private Residence – includes driveways garages, trailer homes and either decedent’s own or another’s residence.

Other Residence – includes hotels, motels, rooming houses, SRO (single room occupancy, shelters, social/supportive housing etc.)

Medical facility – includes hospitals, community care facilities, etc

Industrial/Construction/Manufacturing/Natural Resource Site – includes locations where the decedent was on an industrial (e.g. factory, plant, warehouse), construction (e.g., construction, renovation, demolition), manufacturing (e.g., mill), or natural resource (e.g., mining, oil, forestry) site. The decedent may or may not have been employed at the site.

Public buildings – includes restaurants, community centres, businesses, clinics, etc.

Outside – includes vehicles, streets, sidewalks, parking lots, public parks, wooded areas, and campgrounds.

There has been two deaths at an overdose prevention site (OPS) (in 2022 and 2024). Please see the notes page for definition of death at OPS.

Notes:

This data is only available for completed unregulated drug toxicity death investigations. Drugs involved are noted by the coroner as being relevant to the death. Data does not indicate when a substance was taken.

- **Fentanyl & analogues** includes fentanyl, acetylfentanyl, 3-methylfentanyl, furanylfentanyl, carfentanil, cyclopropyl fentanyl, methoxyacetylfentanyl, 4-fluoroisobutyryl fentanyl, and norfentanyl.
- **Meth/amph** includes methamphetamine and amphetamine.
- **Other opioids** include heroin, codeine, oxycodone, morphine, hydromorphone, methadone, etc but excludes fentanyl and analogues.
- **Other stimulants** include MDMA, MDA, paramethoxymethamphetamine, paramethoxyamphetamine, pseudophedrine, methylbenzodioxylbutamine, methylone, methylphenidate, caffeine, and ephedrine.

Drug Types Detected in Expedited Toxicology Among Unregulated Drug Deaths

Notes:

As of July 1, 2020, the B.C. Coroners Service implemented a new expedited testing protocol that tests 21 drugs in a semi-quantitative manner and results are generated within a few days of samples being received. Samples from suspected drug toxicity deaths are sent for expedited testing and reported presumptively prior to completing confirmatory testing. The following substances are screened in expedited testing: fentanyl & analogues (acetylfentanyl, carfentanil, fentanyl, and norfentanyl), stimulants (cocaine (inc. cocaethylene, benzoylecgonine), methamphetamine/amphetamine, MDMA/MDA), other opioids (6-monoacetylmorphine, codeine, hydromorphone, methadone (inc. EDDP), morphine, oxycodone), and benzodiazepines & analogues (alprazolam, etizolam, flualprazolam). In 2023, detection of fluorofentanyl (fentanyl), bromazolam, and desalkylgidazepam (benzodiazepines) were added. In 2024, detection of ortho-methylfentanyl was added. The data includes **only** unregulated drug toxicity deaths that have undergone expedited testing. The data is preliminary and subject to change as further toxicology results are received.

Mode of Consumption Among Unregulated Drug Deaths

Mode of Consumption ● Injection ● Nasal insufflation/snorting ● Oral ● Smoking ● Unknown/Unavailable

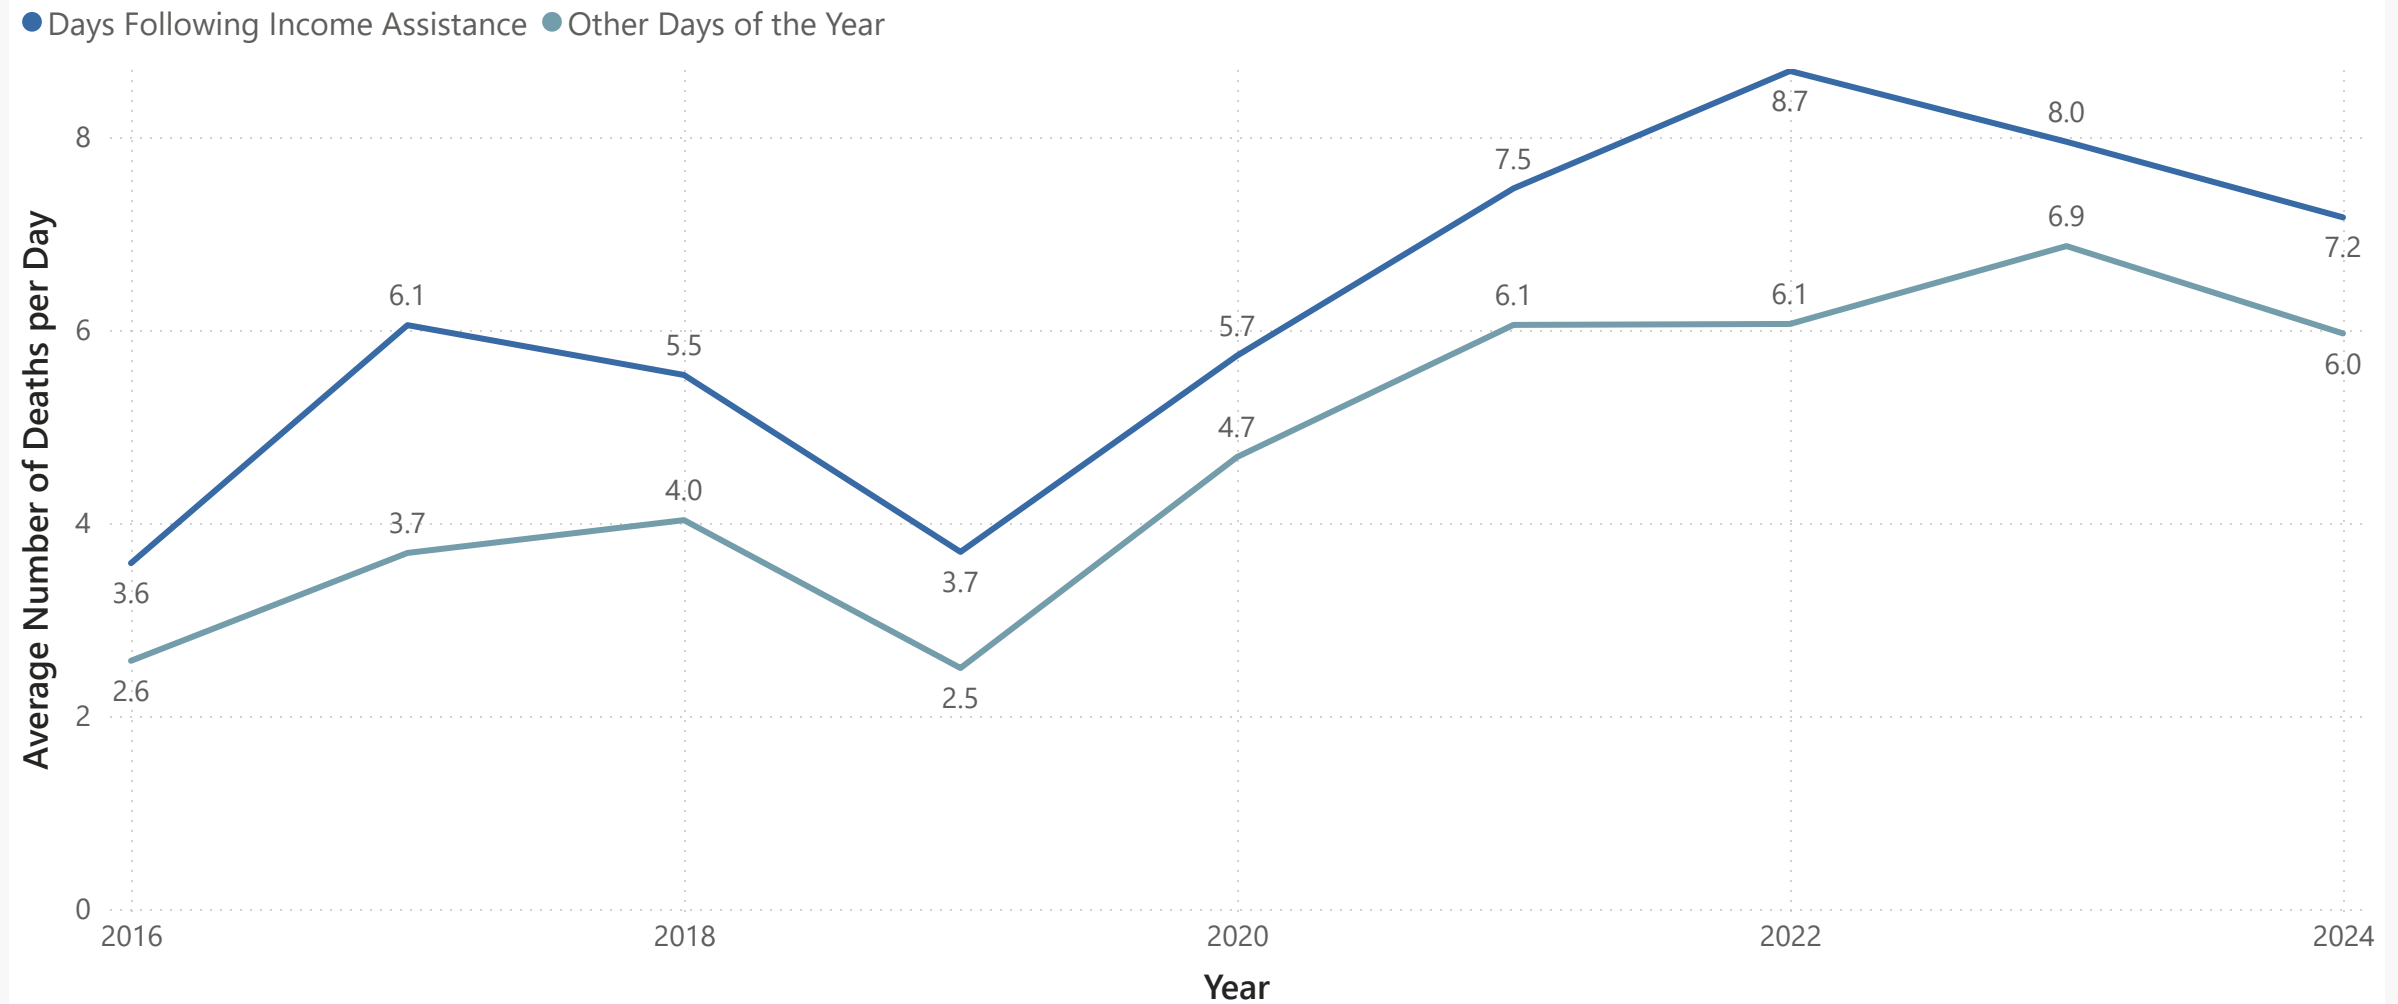

Notes:

Percentages can add up to more than 100% as individuals could have had multiple modes of consumption. Data is based on information gathered by the coroner which may include scene investigation, witness interviews, or a review of circumstances. Data is preliminary and subject to change.

Inclusion Criteria: Unregulated drugs and/or drugs sold illicitly:

- Controlled drugs: heroin, cocaine, MDMA, methamphetamine, illicit fentanyl, fentanyl analogues, etc.;
- Medications not prescribed to the deceased but obtained/purchased from unknown means or where origin of drug not known;
- Combinations of the above with prescribed medications;
- Includes accidental or undetermined deaths;
- Does not include intentional drug toxicity deaths; and
- Does not include unintentional deaths due solely to one's own prescribed medications.

Definition:

The definition of unregulated drug death at an overdose prevention site (OPS) is:

- Deaths are included if the injury is sustained while receiving overdose prevention services and the person dies on-site. This is inclusive of waiting rooms, indoor OPS, and outdoor OPS, but not the areas surrounding an OPS (e.g., parking lots, sidewalks) or areas of the building where overdose prevention services are not delivered.
- Deaths are excluded if the injury occurred at an OPS site and the death occurred during or after transportation for a higher level of care (e.g., in hospital).

Notes:

1. The BCCS operates in a live database environment. Some data for more recent years are based on preliminary circumstances and are subject to change as investigations are concluded. Data are not directly comparable to published counts from previous years.
2. Date of death was used in tables where date of injury was unknown.
3. Population estimates were taken from:
<https://www.bcstats.gov.bc.ca/apps/PopulationProjections.aspx>
4. Health Region breakdowns can be found at:
<http://www2.gov.bc.ca/gov/content/data/geographicdata-services/land-use/administrative-boundaries/health-boundaries>

Please submit a request to BCCS.Stats@gov.bc.ca for questions.
