Canada backs U.S., hackers 'likely' linked to China compromised service providers here

<https://www.itworldcanada.com/article/canada-backs-u-s-hackers-likely-linked-to-china-compromised-service-providers-here/413367>

Using careful language, Canada has backed U.S. allegations that for about 12 years two Chinese citizens hacked managed Internet service providers in several countries to get intellectual property and confidential business and technological information of businesses.

In a statement on Thursday, Canada's electronic spy agency, the Communications Security Establishment said it "also assesses that it is almost certain that actors likely associated with the People's Republic of China (PRC) Ministry of State Security (MSS) are responsible for the compromise of several managed service providers [in Canada] beginning as early as 2016."

Tech-Savvy Santa Relies On AI, Blockchain & Cyber Security

<https://www.forbes.com/sites/rajindertumber/2018/12/21/tech-savvy-santa-relies-on-ai-blockchain-cyber-security/>

Jingle bells, jingle bells,

Jingle all the way.

Oh how savvy it is to ride,

The AI and blockchain way!

Considering the prominence of Artificial Intelligence (AI), blockchain technology and cyber security in today's world, perhaps Santa may want to test these technological advancements — they may allow him and his little helpers to deliver a more efficient Christmas!

How Santa's Cyber Security Culture Can Work For You! Part 1: Cyber Attacks

<https://www.forbes.com/sites/rajindertumber/2018/12/23/how-santas-cyber-security-culture-can-work-for-you-part-1-cyber-attacks/#422a14e37fa6>

Beneath the awe of the Northern lights,
Elves craft away during long polar nights.
Security responsibility lies with all in the wonderland,
Aiming to identify, monitor and control data at hand.

How could Santa encourage a cyber security culture within his magical workshop? How could this culture help you? The purpose of this article is for you, my loyal readers, to extract ideas to incorporate into your own company's culture, if you wish.

Cyber security predictions roundup for 2019

<https://www.itworldcanada.com/article/cyber-security-predictions-roundup-for-2019/413245>

Criminals using artificial intelligence. More nation-state backed attacks. The Internet held hostage. Dangerous chatbots. President Trump's cellphone will be hacked. And, of course, more malware.

These are some of the predictions security vendors see coming in the next 12 months. It's not a pretty picture, but then again cyber security never is.

Bug bounty programs growing stronger

<https://www.itworldcanada.com/article/bug-bounty-programs-growing-stronger/413203>

This week Verizon Communications announced its Oath division — which owns Yahoo, AOL and other media services — had paid out US\$5 million in bug bounties this year.

That's five times more than it paid out in 2017.

Clearly there's money in vulnerabilities, and not just for criminals.

With no developer or developer team able to assure an organization that it can churn out perfectly secure code, bug bounty programs and the money paid for those who find bugs will only go up in the foreseeable future.

This year HP Inc. added a private, invitation-only bug bounty program for its printer division with up to US\$10,000 available for every serious vulnerability found. GitLab, an open source DevOps platform, has made its private bounty program open to any ethical hacker, with prizes of up to US\$12,000 for critical vulnerabilities. Facebook expanded its bug bounty program to add rewards for finding vulnerabilities that involve the exposure of user access tokens.
