

Overall rating: High

This is a technical bulletin intended for technical audiences.

Summary

- The Vulnerability and Risk Management (VRM) Team has been made aware of a Access Rights Manager (ARM) vulnerability. The vulnerability affects versions [Access Rights Manager \(ARM\) prior to 2023.2.2](#).

Technical Details

Sensitive data was added to our public-facing knowledgebase that, if exploited, could be used to access components of Access Rights Manager (ARM) if the threat actor is in the same environment.

Exploitability Metrics

Attack Vector: Adjacent
Attack Complexity: Low
Privileges Required: None
User Interaction: None

This vulnerability is rated as a **HIGH** risk. A software update exists to address this risk.

Action Required

- Locate the device or application and investigate.
- Notify business owner(s).
- Perform mitigating actions, as required.

Please notify [VRM](#) with any questions or concerns you may have.
