BC TRANSIT

Operational Records Classification System (ORCS)

Executive Summary

Creating Agency

BC Transit

Replacement ORCS Change Summary

The *BC Transit Operational Records Classification System (BCTR ORCS)* replaces the previous *BC Transit Operational Records Classification System (BCT ORCS)* to reflect the operational changes that have taken place over the past twenty years. In addition, the new *ORCS* reflects associated changes in records and information management practices and in the *ORCS* format requirements.

Scope

The previous *BCT ORCS* has been replaced by the *BCTR ORCS* to reflect current operational functions and activities such as development referrals, transit service changes, and incidents and investigations.

The *BCTR ORCS* eliminates classifications for defunct programs, practices and functions such as the YouthPass System, customer phone lines, and Fare Zone files.

In addition, the *BCTR ORCS* secondaries are configured so they can easily accommodate new programs and changes to operational processes by making secondaries more functional and less subject based. Single secondaries are used to manage an operational function rather than having multiple secondaries with slightly different focuses. For example, all transit programs are now managed under a single secondary rather than having a secondary for each individual program. This change allows defunct programs to be eliminated and new programs to be introduced without amending the *ORCS*. Similar secondaries have been created for transit data, transit planning, policies, and issues.

Notes On Application

BCTR ORCS classifications fully replace all previous *BCT ORCS* classifications and apply retroactively. All files (i.e., both closed and active) will be reclassified from the previous *BCT ORCS* classifications to the new *BCTR ORCS* classifications.

In *Appendix A: Summary of Changes to the BC Transit ORCS*, under the Type of Change column, secondaries labelled as “Closed” are functions that are no longer performed, and it has been confirmed that no files remain classified under that secondary.

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This is an approved information schedule, as defined by the [Information Management Act \(SBC 2015, c. 27\)](#). For more information consult your [Government Records Officer](#).

Standard Appraisal Considerations

The active and semi-active retention periods specified in the schedule meet all operational, administrative, legal, fiscal, and audit requirements. The final dispositions have been reviewed to ensure that records having enduring evidential and informational values are preserved.

Specific Appraisal Considerations

New secondaries scheduled for full or selective retention by the government archives under this replacement *ORCS* include:

- Final policies and procedures (22000-00)

These records provide significant evidence of the governance of the functions and programs covered by this schedule.

Previously, both the development and approved transit policies and procedures were maintained in the -00 secondary in each and every one of the *ORCS*'s primaries. This current arrangement collects the development files under a single secondary (22000-50) and the final, approved policies and procedures in the 22000-00 secondary.

- BC Transit Board and Board committee files (22000-20)

These files provide a summary record of high-level BC Transit operational decision making.

Previously, these records were classified in *ARCS* under 200-20.

Secondaries with a retention or disposition period significantly affected by this replacement *ORCS* include:

- Final BC Transit plans, reports and studies (22000-02)

This secondary replaces multiple secondaries with a final disposition of DE or SR, as well as a wide variety of retention periods. The combined active and semi-active period for the replaced secondaries ranged from five to ten years, with many also having an open-ended SO or close trigger. This inconsistent approach was resolved by creating several secondaries to cover working documents and capturing final records under this secondary for full retention by the government archives.

Staff indicated that it was necessary to retain final records in the program area for 20 years for research and planning purposes. This more concrete period of time allows a CY active phase.

- BC Transit issue management and research projects (22000-40)

The change in final disposition from SR to DE is accommodated by filing final research reports in another secondary for retention by the government archives.

- Transit data (22100-02)

This secondary replaces several secondaries with identical or comparable retention periods except for one secondary which had a semi-active period of ten years. Given that the transit

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This is an approved information schedule, as defined by the [Information Management Act \(SBC 2015, c. 27\)](#). For more information consult your [Government Records Officer](#).

data has long term research value, the effective retention period will exceed this semi-active period.

- Transit planning case files (22100-30)

The change in final disposition from SR to DE is made possible by the fact that final plans will be classified under secondary 22000-02 with a final disposition of full retention in the government archives.

All other records covered under this schedule are destroyed at the end of their retention periods.

SUMMARY LIST OF NEW CLASSIFICATIONS

SECTION 1 - BC TRANSIT

Classification	Classification Title	Retention
22000	BC TRANSIT - GENERAL	
22000-00	Policy and Procedures	SO 5y FR
22000-01	General	CY 1y DE
22000-02	BC Transit plans, reports, and studies - final	CY 20y FR
22000-03	Lost property management	CY 2y DE
22000-20	BC Transit Board and Board committee files	SO 7y FR
22000-30	BC Transit incidents and investigations	SO 15y DE
22000-40	BC Transit issue management and research projects	SO 5y DE
22000-50	BC Transit policy development files	SO 5y DE
22100	BC TRANSIT - PLANNING	
22100-01	General	CY 1y DE
22100-02	Transit data	SO nil DE
22100-20	Development referrals	CY 10y DE
22100-30	Transit planning case files	SO 5y DE
22100-40	Transit service change planning	CY 5y DE
22200	BC TRANSIT – PROGRAM MANAGEMENT	
22200-01	General	CY 1y DE
22200-02	Transit program applications - approved	SO 1y DE
22200-03	Transit program applications - pending	CY 1y DE
22200-20	Transit program development and management	SO 5y DE

Endorsements

This schedule was developed in consultation with staff and managers who conduct the operational functions in the creating agency. It has also been reviewed by appropriate Government Records Service staff to ensure it meets scheduling and appraisal standards, and reflects sound record keeping practices.

SECTION 1

BC TRANSIT

PRIMARY NUMBERS

22000 – 22999

Section 1 covers records relating to the management of BC Transit's operational functions. BC Transit is a Crown corporation responsible for providing safe and reliable public transportation throughout the province, with the exception of Greater Vancouver, in accordance with the [British Columbia Transit Act \(RSBC 1996, c. 38\)](#). Under the *Act*, BC Transit is mandated "to plan, acquire, construct or cause to be constructed public passenger transportation systems and rail systems that support regional growth strategies, official community plans, and the economic development of transit service areas" [British Columbia Transit Act \(RSBC 1996, c. 38, s.\(1\)\(a\)\)](#).

The BC Transit operational functions covered in this section include analysis, planning and development of existing and proposed public transportation systems and transit programs, services, and facilities.

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This is an approved information schedule, as defined by the [Information Management Act \(SBC 2015, c. 27\)](#). For more information consult your [Government Records Officer](#).

22000 BC TRANSIT - GENERAL

Records not shown elsewhere in this section that relate generally to the provision of operational BC Transit functions. These include the following:

- developing policies, procedures, and guidelines,
- handling passengers' lost property,
- managing BC Transit's issues and research projects, when not specific to plans or programs,
- documenting BC Transit's incidents and investigations,
- collecting various finalized transit related plans, reports and studies created during operational BC Transit functions, and
- providing secretariat services to the BC Transit Board and the directly associated committees of the Board (i.e., Board committees).

For facility management, see [ARCS primary 525](#).

For fare development, evaluation, and negotiation, see [ARCS secondary 1120-20](#).

For fleet vehicle management, see [ARCS secondary 877-20](#).

For organizational planning and annual reports not directly related to transit planning and reporting, see [ARCS primary 400](#).

For policy from external sources, see [ARCS secondary 358-20](#).

For policy registration and tracking, see [ARCS secondary 100-05](#).

For real estate functions, see [ARCS primary 525](#).

For reference material/topical files, see [ARCS secondary 358-20](#).

For supplies management, see [ARCS secondaries 705-20, 705-40](#) and [825-02](#).

For system descriptions, see the System Section.

For training, see the *Human Resources ARCS Supplement (schedule 206270)* primary 7730.

The ministry OPR is BC Transit unless otherwise noted below. See specific secondaries for OPR retention schedules.

22000 BC TRANSIT - GENERAL	A	SA	FD
All non-OPR offices will retain these records for:	SO	nil	DE
-00 Policy and Procedures (covers final/approved policies, procedures (such as standard operating procedures), standards, guidelines and templates pertaining to the functions and activities documented in this ORCS, developed for use by the program area) (arrange by category, if necessary, then by policy name or number)	SO	5y	FR
RETENTION STATEMENT Transfer to the government archives five years after the policy is replaced or becomes irrelevant.			

[Key to ARCS/ORCS Codes and Acronyms](#)

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This is an approved information schedule, as defined by the [Information Management Act \(SBC 2015, c. 27\)](#). For more information consult your [Government Records Officer](#).

22000	BC TRANSIT - GENERAL	A	SA	FD
	SO: when the policy is replaced or becomes irrelevant			
	FR: The government archives will fully retain final versions of operational policy documentation because these provide significant evidence of the governance of the functions and programs covered by this schedule.			
-01	General	CY	1y	DE
	RETENTION STATEMENT Destroy at the end of the second calendar year.			
	NOTE: Throughout this section, this secondary covers miscellaneous records that relate to the primary but do not document decisions and actions, and do not relate to topics that warrant specific classifications.			
-02	BC Transit plans, reports, and studies - final (includes finalized plans, reports and studies) (arrange by the document's name and year)	CY	20y	FR
	RETENTION STATEMENT Transfer to the government archives at the end of the 21st calendar year.			
	20y: The 20-year retention period allows for long-term research and reference of previous plans, reports, and studies for current planning.			
	FR: The government archives will fully retain finalized BC Transit plans, reports, and studies because these records document the broad impact of BC Transit operations on the community and environment. It also provides evidence of formal research and strategic development towards improving BC Transit services.			
	NOTE: This secondary covers finalized versions of plans, reports and studies created under secondaries 22000-40, 22100-30, 22100-40 and 22200-20.			
PIB	-03 Lost property management (covers records relating to the collection and identification of lost property found on BC Transit vehicles)	CY	2y	DE

22100 BC TRANSIT - PLANNING

Records relating to BC Transit's transit system and service planning such as strategic/long-term transit plans, transit future plans, operational plans, short-term plans, route plans, community plans, land use plans, and scheduling plans.

Transit system and service planning activities includes

- gathering and analyzing transit data,
- conferring with local governments (e.g., Victoria Regional Transit Commission) and the public,
- creating or contracting studies and reports, and
- drafting and amending the transit plans.

Various jurisdictions and agencies also often submit proposals for developments (e.g., highways, airports, city limit expansion, neighbourhood rezoning) to BC Transit for comment and information. BC Transit may respond to such proposals with questions and recommendations.

For BC Transit publications (completed and in development), such as the *Rider's Guide*, see [ARCS secondaries 312-05 and 312-20](#).

For customer satisfaction surveys, see [ARCS secondary 338-02](#).

For organizational charts and organizational history, see [ARCS secondary 105-02](#).

For organizational planning (e.g., BC Transit corporate strategic plans) and annual reports not directly related to transit planning and reporting, see [ARCS primary 400](#).

For reference material/topical files, see [ARCS secondary 358-20](#).

For system descriptions, see the System Section.

The ministry OPR is Business Development unless otherwise noted below. See specific secondaries for OPR retention schedules.

22100 BC TRANSIT - PLANNING	A	SA	FD
All non-OPR offices will retain these records for:	SO	nil	DE
-01 General	CY	1y	DE
RETENTION STATEMENT Destroy at the end of the second calendar year.			
-02 Transit data (includes customized and standardized data compilations, raw data and data on scheduling, vehicle location, GIS, service monitoring, traffic counts, business, and employee counts maintained in various databases)	SO	nil	DE

SYSTEM SECTION

Bus Stop Management System (BSMS)

SYSTEM OVERVIEW

Creating Agency

BC Transit

Date of System Description

2021-06-13

Purpose

The Bus Stop Management System (BSMS) maintains up-to-date inventories of bus stops to assist staff with route and bus stop location planning.

Information Content

BSMS contains bus stop attribute data (e.g., ID, name, location, and owner) and bus stop amenities data (e.g., heat/light, shelter, bench, signage, and schedule holder).

Inputs, Processes, and Outputs

Inputs

BC Transit staff input BSMS data.

Processes

Location data (e.g., offset, longitude and latitude) are calculated rather than entered.

Outputs

Location data connects the bus stop's attribute data to a spatial map for easy reference and for use in publication.

Historical Note

BSMS is a spatial database that uses the General Transit Feed Specification (GTFS) standard.

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This is an approved information schedule, as defined by the [Information Management Act \(SBC 2015, c. 27\)](#). For more information consult your [Government Records Officer](#).

Bus Stop Management System (BSMS)

DATA RETENTION PLAN

Data Description	Data Retention Period
Transit Data Classification 22100-02	Destroy transit data once it is replaced or is no longer required for research or reference purposes.

END OF OVERVIEW

DILAX Citisense (DILAX)

SYSTEM OVERVIEW

Creating Agency

BC Transit

Date of System Description

2021-06-13

Purpose

DILAX Citisense (DILAX) enables BC Transit staff to evaluate passenger data, and, in turn, it facilitates transit development, operations, and scheduling decision-making. Analysis and reporting functions provide BC Transit planners with a full picture of daily transit activities by combining passenger data with other data, such as timetables, ticketing and vehicle information.

Information Content

DILAX contains passenger count data (e.g., stops, boardings and alightings), vehicle data (e.g., operator code, compartment, coupling/uncoupling, and vehicle code and type), stop data (e.g., name, location, and area) and schedule data (e.g., timetable, network, trips, and cancellations).

Inputs, Processes, and Outputs

Inputs

DILAX gathers raw passenger data from Automatic Passenger Counter (APC) hardware installed on transit vehicles. Passenger data may also be manually entered. Schedule data is imported from the HASTUS system.

Processes

DILAX has predictive analysis processing which assists planning and scheduling. It also performs diagnostics to verify if passenger counting is accurately matched with transit schedules.

Outputs

Standardized reports are created directly from DILAX for use in scheduling, operations and development. Other reports are produced from DILAX data using Microsoft Power Bi. Data is also exported into HASTUS for further analysis.

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This is an approved information schedule, as defined by the [Information Management Act \(SBC 2015, c. 27\)](#). For more information consult your [Government Records Officer](#).

END OF OVERVIEW

GuardCard

SYSTEM OVERVIEW

Creating Agency

BC Transit

Date of System Description

2021-06-13

Purpose

GuardCard is a database used to produce and issue identification cards for internal use (i.e., employee transit passes and security passes) and individual passes for some transit programs (i.e., EcoPass and ProPass).

Information Content

GuardCard contains identity card data (e.g., card status, format, unique code, issue and end dates), employee information (e.g., name, photo, department, and employee ID), and customer personal information (e.g., name, photo, contact information, and city/region).

Inputs, Processes, and Outputs

Inputs

Staff input data directly or, in the case of employee information, by importing from Trapeze.

Processes

GuardCard performs no calculations or workflow processes.

Outputs

The primary output of GuardCard is a printed identification card. Reports may also be run to provide lists of identity cards.

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This is an approved information schedule, as defined by the [Information Management Act \(SBC 2015, c. 27\)](#). For more information consult your [Government Records Officer](#).

GuardCard

DATA RETENTION PLAN

Data Description	Data Retention Period
Transit program applications - approved Classification 22200-02	Destroy one year after the individual no longer requires custom transit service.

For descriptions of system related records (e.g. back-up data, log files, and transitory electronic data processing (EDP) records), see the [Systems Section FAQ](#).

END OF OVERVIEW

HASTUS

SYSTEM OVERVIEW

Creating Agency

BC Transit

Date of System Description

2021-06-13

Purpose

The purpose of HASTUS is to support transit planning including regular and on-demand transit schedule planning and day-to-day operations and administration of the transit system. It tracks, manages and reports on a wide variety of transit related data.

Information Content

HASTUS contains operational transit data such as route data (e.g., number, name, bus stops, actual and estimated travel time, dates, and exceptions), spatial data (e.g., direction, place, street, zone, district, and landmarks), and vehicle schedules data (e.g., booking, location, and status).

HASTUS also contains administrative data such as vehicle management data (e.g., owner, type, garage, status, operating hours, and maintenance) and crew schedule data (e.g., duties, times, payroll, cost, and performance).

Inputs, Processes, and Outputs

Inputs

Data related to vehicles, operators and passengers (de-identified) is imported from the Bus Stop Management System, DILAX Citisense, GFI Farebox and NextRide/SmartBus. Spatial data is downloaded and imported from various spatial data sources. All other data contained within HASTUS is manually entered by staff.

Processes

HASTUS performs calculations (e.g., statistics, percentages, speeds, distances, punctuality) to assist in planning and scheduling analysis.

Outputs

HASTUS produces reports to assist in ongoing planning and scheduling of vehicles, routes, operators and crews.

HASTUS produces transit schedules, routes and maps which are available through web-based applications such as NextRide and Transit as well as published on the BC Transit website. Schedules are also exported to DILAX Citisense to match up against passenger count data.

HASTUS exports vehicle data and transit operator and crew work assignments into Trapeze.

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This is an approved information schedule, as defined by the [Information Management Act \(SBC 2015, c. 27\)](#). For more information consult your [Government Records Officer](#).

HASTUS

DATA RETENTION PLAN

Data Description	Data Retention Period
Transit data Classification 22100-02	Destroy transit data once it is replaced or is no longer required for research or reference purposes.

For descriptions of system related records (e.g. back-up data, log files, and transitory electronic data processing (EDP) records), see the [Systems Section FAQ](#).

END OF OVERVIEW

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This is an approved information schedule, as defined by the [Information Management Act \(SBC 2015, c. 27\)](#). For more information consult your [Government Records Officer](#).

PERSPECTIVE

SYSTEM OVERVIEW

Creating Agency

BC Transit

Date of System Description

2021-06-13

Purpose

The purpose of Perspective, also known as PPM, or Incident Management and Investigation Program or Resolver (i.e., the Vendor's Name) is to track and help staff manage lost property and respond to transit activities and incidents.

Information Content

Perspective records activities and incident data (e.g., summary, date, time, system, bus and route number, police involvement, status, legal actions and claims, access control, outcome), involved persons data (e.g., details, description, contact information, and notes of operators, injured parties, witnesses, supervisors, etc.), involved organizations data (e.g., involvement type, contact information, and comments of police, ambulance, fire department, etc.), involved vehicles data (e.g., involvement type, details and comments of bus and any other vehicle involved), item data (e.g., losses and recoveries, disposition and description), and investigations data (e.g., investigator(s), dates, status, notes, interviews, comments, CCTV logs and recordings). Documents may also be attached to incidents.

Inputs, Processes, and Outputs

Inputs

The majority of the data recorded in Perspective is manually inputted by staff and contracted operators. BC Transit vehicle data is imported from a vehicle asset management system and operator data is imported from Trapeze. Incidents may be manually linked to each other in order to 1) connect the same event that was reported twice, or 2) connect incidents that have similarities which may require future attention.

Activities are generated based on calls to the Transit Communication Coordinators (T-Comm) and become incidents based on the judgement of the Victoria Security Department. Activities may involve anything reported to T-Comm but generally activities such as security breaches, vandalism, theft and accidents are elevated to incidents.

Other calls/reports which do not involve T-Comm (e.g., from Victoria Customer Relations or Customer Service Reports) are automatically entered as incidents due to the system's method of entering information from these sources rather than based on the type of incident.

Processes

Workflows may be used to assign specific tasks to staff or contracted operators. Perspective also maintains an audit trail on changes and actions taken within the system.

[Key to ARCS/ORCS Codes and Acronyms](#)

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This is an approved information schedule, as defined by the [Information Management Act \(SBC 2015, c. 27\)](#). For more information consult your [Government Records Officer](#).

Outputs

In addition to various statistical reports and the ability to create customized incident reports, Perspective can report on the history of activities and incidents associated with the involved vehicle or person.

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This is an approved information schedule, as defined by the [Information Management Act \(SBC 2015, c. 27\)](#). For more information consult your [Government Records Officer](#).

PERSPECTIVE

DATA RETENTION PLAN

Data Description	Data Retention Period
Lost property management Classification 22000-03	Destroy at the end of the third calendar year.
BC Transit incidents and investigations Classification 22000-30	Destroy 15 years after incident or investigation is completed and if applicable, after minor has reached the age of majority (19 years).
BC Transit issue management and research projects Classification 22000-40	Destroy five years after the issue is resolved or obsolete or the research project is completed or abandoned.

For additional classification details, including retention rationales, click on the links above.
For descriptions of system related records (e.g. back-up data, log files, and transitory electronic data processing (EDP) records), see the [Systems Section FAQ](#).

END OF OVERVIEW

[Key to ARCS/ORCS Codes and Acronyms](#)

Trapeze OPS (Trapeze)

SYSTEM OVERVIEW

Creating Agency

BC Transit

Date of System Description

2021-06-13

Purpose

The purpose of Trapeze OPS (Trapeze) is to integrate and automate transit operations management and workforce management. It is used by BC Transit to track employee availability. It is used by employees to “Bid” on shifts. It is used to “dispatch” drivers and assign mechanics and yard personnel to yard and asset management tasks. Vehicle damage noted in accidents informs mechanic assignments. Information about incidents which involve injury to a worker is used to initiate and review work-related incidents. Trapeze OPS integrates with HR and with payroll systems.

Information Content

Trapeze contains work assignment data (e.g., type and name of work, division, dates and times, employee, vehicle, and priorities), employee data (e.g., name, contact information, licenses, medical information, actual and assigned work time and leave, payroll details, seniority, location, status, type, performance details and customer feedback), worker's accident/incident data (e.g., date and time, location, employee, type, supervisor, damage amount, vehicle, insurance policy and notes) and vehicle data (e.g., number, make, year, description, license, type, garage, status, and maintenance history).

Inputs, Processes, and Outputs

Inputs

Schedules, routes, and vehicle details are imported from HASTUS. Transit operator and crew work assignments are imported from HASTUS. Other employee data, including worker's accident/incident data is manually entered.

Dispatchers assign drivers and enter exceptions. Employees can submit desired shifts. Managers assign mechanics and yard workers and enter notes and comments. Mechanics and yard workers update the system to confirm task completion and enter notes and comments.

Processes

Trapeze calculates time worked into payroll information. Trapeze can also generate messages for employees whose driver's licenses, medical approvals, or Vehicle Transit Training (VTT) are about to expire.

Outputs

Daily activity, manifest and dispatch reports are standardized reports. Other customizable reports can be created.

Employee payroll data is exported to the payroll system for payment.

OPERATIONAL RECORDS CLASSIFICATION SYSTEM

This is an approved information schedule, as defined by the [Information Management Act \(SBC 2015, c. 27\)](#). For more information consult your [Government Records Officer](#).

APPENDIX A: Summary of Changes to the BC Transit ORCS

This concordance table is intended as a general guide for transition between the old and new versions of this ORCS. The new classifications and retentions are to be applied to all relevant digital and physical operational records, both in the office and in storage. When converting old files to the new ORCS, you will need to check file contents to ensure that the recommended replacement secondary is appropriate for that particular file.

Primary/ Secondary	Title	Type of Change	New retention A/SA/FD
