

NOTE

This is an early announcement of an upcoming release of CMS Lite, detailing new features and bug fixes, and may include information about other products. **This is a DRAFT document.** A final version of the release notes will be published, online, on the date of the upgrade.

Product: CMS Lite

Release Number: 2.8.3

Release Date: May 29, 2018

What's New?

- Pickers now have an up/down scrollbar, which improves the user experience
- If you move a child page, and not republish it, and then try and delete its parent, the deletion will not happen, and you will be notified by email
- The Release Notes link in the help menu was accidentally removed in the previous release. It is now back in the menu
- The GDx email address which is displayed in the application's error messages has been updated
- You can now search on the CMS Lite homepage for Taxonomy, Vocabulary, Term, Tag Collection Folder, Tag Collection, Metadata Tag Collection Folder, and Metadata Tag Collection by its ID
- Other front and back-end changes have been implemented to improve the application
