

ENGTools 2022 Plugin Update

Instructions

1. Install the update via the automatic update process

Feb 28, 2023 Update

1. Added support for Civil 3D 2024. Note that this is for testing purposes only.
2. Various .NET macros have been recompiled to properly work with Civil 3D 2019-2024. Some macro DLL files were not properly compiled for specific versions.
3. Added macro ENGTools 2022 > C3D Design > Volume Report. This macro creates Material Reports that used to convert to HTML reports using Internet Explorer. The reports are created directly into an Excel spreadsheet and allows selection of a specific station range and full volume and area accuracy.
