SA08 - LOCAL AREA SPECIFICATION #6

ENERGY DISSIPATER/OIL SKIMMER AND WELL POINT MAINTENANCE

All services in this Local Area Specification are Routine Maintenance.

There are two energy dissipaters/oil skimmers in this Service Area, specifically:

- a) on the storm sewer system on Highway #97 near the Okanagan Lake Bridge ([08-D-@-00097N](#) Kilometre 42.040); and
- b) at the junction of Gellatly Road and Witt Road ([08-D-@-00475](#) Kilometre 0.030).

The Contractor must clean these energy dissipaters/oil skimmers.

There are well points located on the municipal right-of-way below a known slide area on Highway #3 in Princeton ([08-C-@-00003](#) Kilometre 32.700). These wells relieve sub-terrain water pressure from below the highway.

The Contractor must:

- a) flush the well points, using air pressure, once annually;
- b) monitor the drainage system to the Similkameen River for proper operation; and
- c) flush the drainage system once annually with water from a point at each well head.
