

Project Benefits

- Enhanced safety for all users of Highway 16 corridor by replacing the last level rail crossing between Prince Rupert and Alberta with a bridge overhead.
- Removal of S-curve crossing eliminates need for slowing of traffic to 40km/hr to safely cross. Posted speed along the new alignment will be 100km/hr.
- Separating the Highway 16 and CN Rail corridors by realigning this section of Highway 16 greatly improves safety by reducing rail and road traffic conflicts.
- Improved snow storage reduces chance of heavy snow events closing this section of Highway 16, and reduces maintenance challenges.
- Minimal environmental impact, and in some areas, improvements are being made.
