## Save Our Forest Forset Resourse Management

Grade 5 and 6

Due December 1, 2003

## Introduction

As stewards of the environment together we can save the forest. Another way we can save our forest is don't waste too much paper. Don't cut down all the trees because there are animals who think trees are their home. For thousands of years, humans have played an important role in the global deforestation and increasing. Over time empires have cut down forests for their own use. Most of those forests never grew back like in Great Britain, the Middle East, and in the Mediterranean. Canadians highly value their forests and water. Less than 8% of Canada's forests are protected by the government. In Nova Scotia, there are no more forest landscape due to clearcutting. Over 60% of re-grown forests have limitations. Canada has 30% of the world's boreal forests and 10% of the world's total forests. Canada is one of the countries which is regrowing its forests. Over 2,445,700 square kilometers are prevented from logging. Majority of these trees are in protected reserves. The main protected areas are rocky mountain national parks such as: Banff, Jasper, and Waterton. And boreal forest national parks such as, Wood Buffalo Park.

introduction page 2

Forestry is one of Canada's biggest resources. In 1995 the logging industry employed 369,000 people. From logging our wild life can be influenced by, stream flow, soil erosion, sedimentation.

Paper Consumption at School-One  
 individual Frequency chart

Items	quantity
Home	9
School	30
plain paper	35

After we did an analysis of how much paper we used in one week we timed it by 52 weeks. According to our calculations in over one year together we would use over 3900 peices of paper. Then we kinda thought about it .What about in our community because if two people just used 3900 peices of paper in a year what a bout a city ,country,or the whole world. So if there were 185000 people just in richmond ,just think of the paper we would use. And also think of how many trees we would cut down just for paper. That would be to many to count.

## conclusion

Together we can all save the forests. Because of careless people our forests are getting wasted and our animals homes are getting destroyed . We can all save our forests by recycling paper and try to stop using to much paper. Around the world people are trying to save our forests and wildlife but nobody cares so we should actually care about the forests because if we dont care we will hav no forests to protect. And if there are no forests there are no new houses and paper. so as a society we should all give support to our forests and recycle the paper we use. In stead of using paper for every thing think about computers .computers can save our forests because they only use paper when you print, so you dont need to throw out all the paper for rough drafts and more . So think about it if you use computers its easier and at the same time your saving the forests.

## Recommendations

we Recremend you:  
 think locally  
 act globaly  
 dont waste paper  
 care for the forests

Reduce  
 Reuse  
 Recycle
