### Rural BC Community Energy and Emissions: Decision Support Tools and Approaches

This webinar is a follow up to Rural BC Secretariat's popular June 9th offering entitled 'Community-Scale Energy and Emissions Modelling in BC'. This session will profile the active work of three rural BC communities – District of Sicamous, Village of Queen Charlotte, and the City of Revelstoke. Each community is applying different decision-support tools (e.g., modelling, visualizations) and approaches (e.g., public engagement, peer dialogue) in developing and incorporating community energy and emissions targets and actions in their Official Community Plans and supporting documents as part of their community's efforts towards building a sustainable, energy efficient future.

Our presenters will share:

- How community energy and emissions modelling is being applied in rural BC communities in low cost, user-friendly ways, with examples of actions being planned; and
- How other tools and approaches, including community engagement and visualization, are contributing to progressive longer-term planning in rural communities.

Join online

at no cost

Presenting at the Webinar will be:

- Alan Harris, CAO, District of Sicamous
- Bill Beamish, CAO, Village of Queen Charlotte
- John Guenther, Director of Planning, City of Revelstoke
- Ron Kellett, University of British Columbia
- Dale Littlejohn, Community Energy Association
- Yuill Herbert, Sustainability Solutions Group
- Ted Sheldon, Climate Action Secretariat
