**IMPORTANT NOTICE AND DISCLAIMER**

These floodproofing elevations are intended for local diking authorities only. These elevations are based on the latest flood risk analysis and are intended to provide a guide for local diking authorities in determining the appropriate elevation for new developments or for upgrading existing dikes.

Local diking authorities are advised to consult with the Local Authority Flood Risk Manager (LAFRM) before undertaking any development in flood-prone areas. The flood risk analysis is subject to change as new information becomes available, and local diking authorities are advised to monitor the flood risk analysis regularly.

Local diking authorities are advised to consult with the Provincial Flood Control Division and the local authority flood risk manager for further information on flood risk analysis and floodproofing elevations.
