The map displays potential year 2100 coastal floodplain areas based on approximate flood construction levels (FCLs) incorporating sea level rise. The map does not include the effects of flooding from rivers or the combination of river flooding and sea level rise. Additional comprehensive site investigations, data collection, and coastal engineering analysis is required to establish the actual year 2100 FCL at any given location. Users should refer to the report "Coastal Floodplain Mapping Guidelines and Specifications" prepared by Kerr Wood Leidal Associates for the Ministry of Forests, Lands and Natural Resource Operations in 2011 for more guidance on development of coastal floodplain maps.
