CARIBOO	CAR - DOG CREEK	PABLO CREEK - FR - 2018/06/20	The stream gets NO water from Westwick Lakes. Pablo Creek is DRY North of Westwick Lake North until it picks up water from a spring on Pablo Mtn. which flows to the creekbed. There is quite a distance where the creekbed is DRY all the time.This dry creekbed has been apparent for a number of years. Do not issue any licences on Pablo Creek for anything. KOOTENAY	FER - TOBACCO PLAINS	RESERVE CREEK - PWS - 2024/02/08	"The sole licensee on Reserve Creek is unable to use the allocated volume on their licence due to persistent lack of water at the point of diversion. PWS on the source is being investigated by water stewardship division (2023) and may be upgraded to Fully Recorded. Ongoing Compliance and Enforcement Investigation also may prove PWS notation not necessary - complaints of potential unauthorized upstream diversions are currently under investigation. Water Licence Application recently submitted and is related to authorizing works that are part of the ongoing Compliance and Enforcement investigation. WL Application submitted during active C+E investigation on same property as investigation is taking place. File 20027703. Ongoing. The 2006 demand analysis and 2022 demand analysis show sufficient water for the licenced users. The issuance of new water licences for McIntosh Spring is not recommended until the Spillimacheen pipeline water users either a)create a joint water users agreement or b)become an Interior Health regulated system. The extended process required to issue this licence, and water availability concerns, would be mitigated with implementation of option a) or b)."	NO79741	2821	082K/16	McIntosh Spring	A

OKANAGAN	PRN - KEREMEOS	259 - FR-EXC - 2022/12/07	Aquifer 259 is hydraulically connected to the Similkameen River, a source which has been fully recorded since 1960. High transmissivity between the Similkameen and wells constructed into Aquifer 259 due to the coarse unconsolidated materials of the aquifer, likely cause substantial streamflow depletion particularly in the latter part of the irrigation season. This may have significant impacts to environmental flow needs (EFN), including impacts on fish species during sensitive life-cycle time periods. In addition, there are several red and blue listed species which may experience significant impacts due to surface and groundwater decline. With the addition of existing use groundwater (EUGW) license allocation volumes on the aquifer as well as connected contributing aquifers, Aquifer 259 may be over allocated at this time. No new groundwater licence applications should be accepted on Aquifer 259 and current new-use applications may be refused	NO206451	82.E.021		259	A
