

DRINKING WATER OFFICERS' GUIDE: PART B

BEST PRACTICES AND TECHNICAL ASSISTANCE

Last updated August 2017

Table of Contents

Determining Appropriate Drinking Water Chemical and Physical Monitoring Guidelines

1. Purpose
2. Background
3. Process
4. Decision Tree for Drinking Water
5. Decision Tree Endnotes
6. Definitions

Requests For Investigation Of A Drinking Water Threat Under The Drinking Water Protection Act

1. Purpose
2. Application

Strategies, Tools And Procedures Health Authorities May Use To Find And Regulate Small Systems

1. Purpose
2. Background
3. Strategies to Find Un-permitted Systems
 - 3.1 Use of MOE's WILIS Water Licence Web Query, to find licences for extraction
 - 3.2 Use of MOE's "WELLS Database, Report 6" to search for groundwater drinking water supply systems.

Drinking Water Complaints And Inquiries Process

1. Purpose
2. How Do I Make a Complaint or Inquiry?
3. How Will My Concern Be Addressed?
 - 3.1 Concerns about Drinking Water Systems
 - 3.2 Concerns about Service Provided by Health Authorities
 - 3.3 Concerns about Policies or Services Provided by the Health Protection Branch, Ministry of Health
4. Still Not Satisfied?
5. Ombudsperson

Drinking Water Treatment Objectives (Microbiological) for Surface Water Supplies in British Columbia

1. Objective
2. Background and Regulatory Framework
3. Purpose and Scope
4. Treatment Objectives
 - 4.1 4-log Inactivation of Viruses
 - 4.2 3-log Inactivation of *Giardia* and *Cryptosporidium*
 - 4.3 Two Methods of Treatment (Dual Treatment)
 - 4.4 ≤ 1 NTU in Turbidity
 - 4.5 No Detectable *E. Coli*, *Fecal Coliform* and *Total Coliform*
5. Conclusion
6. References

Drinking Water Treatment Objectives (Microbiological) for Ground Water Supplies in British Columbia

- Executive Summary
1. Objective
 2. Background and Regulatory Framework
 - 2.1 Requirements for Potable Water
 - 2.2 Requirement to Disinfect
 - 2.3 Water Quality Objectives (Microbiological)
 3. Purpose and Scope
 - 3.1 Purpose
 - 3.2 Scope
 4. Ground Water at Risk of Containing Pathogens (GARP)
 5. Sources at Low Risk of Containing Pathogens
 6. Well Protection
 7. Microbiological Treatment Objectives

- 7.1 *Microbiological Treatment Objectives for 'GARP' Sources*
- 7.2 *Microbiological Treatment Objectives for 'GARP-virus only' Sources*
- 7.3 *Subsurface Filtration Treatment Credits*
- 7.4 *Turbidity in GARP Sources*
- 7.5 *Filtration Exemption*
- 7.6 *Other Bacteriological Concerns*
- 8. References

Appendix A – Subsurface Filtration Details

- A1. Treatment Credits Available for Subsurface Filtration
- A2. Eligibility
 - A2.1. *Giardia and Cryptosporidium Treatment Credits*
 - A2.2. *Virus Treatment Credits*
- A3. Treatment Credit Demonstration Methods
 - A3.1. *Well/Surface Water Separation*
 - A3.2. *Subsurface Filtration Study*
 - A3.3. *Demonstration of Performance*
- A4. Credit Maintenance

British Columbia Guidelines (Microbiological) on Maintaining Water Quality in Distribution Systems

- 1. Overview
 - 1.1 Objectives
 - 1.2 *Regulatory Framework*
 - 1.3 *Purpose and Scope*
- 2. Background
 - 2.1 *Factors Affecting Microbiological Water Quality in Distribution Systems*
 - 2.1.1 *Biological Stability of the Water*
 - 2.1.2 *Conditions in the Distribution System*
 - 2.1.3 *Formation of Biofilms*
 - 2.1.4 *Contamination from Outside the Distribution System)*
- 3. Guidelines
 - 3.1 *The Multi-Barrier Approach to Maintaining Water Quality in the Distribution System*
 - 3.2 *Operating with Secondary Disinfection*
 - 3.2.1 *What is Secondary Disinfection?*
 - 3.2.2 *Why is Secondary Disinfection Recommended?*
 - 3.2.3 *What is the Recommended Operational Range for Disinfectant Concentration?*
 - 3.2.5 *What are the Recommended Monitoring Practices*
 - 3.3 *Operating Without Secondary Disinfection*
 - 3.3.1 *Is There an Opportunity to Operate Without Secondary Disinfection?*
 - 3.3.2 *Ongoing Evaluation of Water Supply Systems Operating Without Secondary Disinfection*

Appendix A: Sources of Further Information

Appendix B: Design, Installation and Operation of Distribution System Components

Appendix C: Protective Factors Associated with Design Elements and Operations of Water Supply Systems

Decision Protocols for Cyanobacterial Toxins in B.C. Drinking Water and Recreational Water

- 1. Purpose
- 2. Background Information on Cyanobacteria
- 3. Sampling, Portable Test Kits and Laboratories
- Decision Tree for Drinking Water: Cyanobacterial Toxins
- Decision Tree for Drinking Water: Cyanobacterial Toxins – Step Descriptions
- Decision Tree for Recreational Water: Cyanobacterial Toxins
- Decision Tree for Recreational Water: Cyanobacterial Toxins – Step Descriptions
- Appendix A: Cyanobacteria Preparation Checklist and Sample Contact List
- Appendix B: Suggested Messaging

Decision Tree for Responding to a Turbidity Event in Unfiltered Drinking Water

1. Objective
2. Introduction
3. Filtration
4. Communication and decision-making
5. Definitions

Decision Tree for Responding to a Turbidity Event in Unfiltered Drinking Water

Appendix A: Expanded notes for the decision tree

Appendix B: Turbidity-related risk factors: considerations for health risk assessment

1. Source Water
2. Treatment System
3. Other Considerations

Water Systems For Class D & E Slaughter Establishments and Other Unregulated Uses

1. Purpose
2. Position
3. Application
4. Questions and Answers

Obligations of the Water Suppliers of Drinking Water Treatment Systems that have Point of Use/Point of Entry Devices

1. Objective
2. Background
3. Water Supplier Obligations
