

**Vegetation Resources Inventory Sample Selection Procedures for Ground Sampling**  
**Version 3.3, December, 2002**  
**Errata #1 April, 2005**

1. page 7	- <b>1.</b> – append as last paragraph to <b>Section 3.2.1 Land cover categories:</b> Rank 1 Layer information is to be used for the identification of the population to be sampled, the selection of sample polygons, and the subsequent analysis. This is particularly important in second growth stands with residual (or veteran) trees.
