

British Columbia Conservation Data Centre

2024 B.C. Conservation Status Rank Review and Changes

Ecological Communities

Additions/Removals:

- No new ecological communities were added to the CDC list.
- One ecological community was deleted. *Tsuga heterophylla* / *Symphoricarpos albus*; western hemlock / common snowberry was deleted because the most recent work on classification indicated this concept was not supported by data.

Name Changes:

- No ecological communities had scientific name changes.
- No ecological communities had English name changes.

Conservation Status Ranks:

- The conservation status was reviewed for 15 ecological communities.
- Five communities had rank changes due to new information (see spreadsheet for more information).
- 15 Conservation Status Reports were updated.

Element Occurrence Mapping:

- 107 new Element Occurrences were published (and 56 updated) for 12 ecological communities.
