Timber Sales Manager

The Timber Sales Manager is responsible for ensuring that the goals and business targets are achieved for one of twelve regional Business Areas. The TSM is responsible for providing leadership in marketing of timber to the private sector, optimizing net return to the crown and for developing credible data to support the market pricing system.

Woodlands Manager

The Woodlands Manager is responsible for directing and operating a Business Area. The Woodlands Manager identifies the necessary resources for the achievement of operational objectives, and issues and administers Timber Sale Licenses, and manages and monitors operations until free growing state is reached.

Business Manager

The Business Manager provides leadership and management of financial, human and corporate services for the business area. The Business Manager oversees the delivery of a diverse range of financial management, human and physical resources and administrative services to the Business Area (BA) ensuring the appropriate resources, policy practices and controls are in place.

Woodlands Supervisor

The Woodland Supervisor is responsible for employing sound business and forest management practices in the planning, developing and management of an aggregate of BCTS operating areas within an assigned geographic area, in order to meet revenue and volume targets through the auction of Timber Sale Licenses (TSLs). The Woodlands Supervisor engages various professionals such as engineers and foresters in order to attain appropriate advice and professional direction for their scope of practice.

Planning Officer

The Planning Officer is responsible for all the strategic and integrated planning processes required for the business area. The position synthesizes information from a wide variety of stakeholders to develop the pivotal Forest Stewardship Plan for the business area as well as leads or participates with various ministries and inter-agencies to develop higher level and local plans.

Planning Forester

The Planning Forester produces and analyzes a wide range of data to develop integrated resource and operational plans, primarily the Forest Stewardship Plan (FSP) and operating plans. The Planning Forester works with government staff, industry, First Nations and representatives of public resource user groups to develop strategic and tactical plans to meet the BCTS mandate.

Practices Forester

The Practices Forester is accountable for performing a wide variety of professional services to support the development and operational stages of pre and post Timber Sales License (TSL) awards, active harvesting, and silviculture operations. The practices forester provides professional advice to technicians and contractors.

Engineering Specialist

The Engineering Specialist manages all aspects of the engineering program within a BCTS Business Area, which includes bridge, survey, resource roads, and road design. The position also manages budgets, contracts and staff, stakeholder consultation, certification, and public safety.

Operations

Technologists

The Operations Technician is responsible for developing operating standards, implementing new forest management practices, coordinating technical activities, monitoring adherence to legislative and environmental standards, and providing technical expertise to staff on Timber Sales License (TSL) development, operations, silviculture, and forest health (FH) activities.

Engineering Specialist

The Engineering Specialist manages all aspects of the engineering program within a BCTS Business Area, which includes bridge, survey, resource roads, and road design. The position also manages budgets, contracts and staff, stakeholder consultation, certification, and public safety.

Engineering Technologist

The Engineering Technician is responsible for coordinating, implementing and monitoring engineering activities for a specific field area. The position provides engineering expertise and advice to operational staff and works closely with the Engineering Specialist to ensure environmental, construction and legislative requirements are met.

Forest Technologists

The Forest Technician is part of a multidisciplinary field team of technicians and professionals and performs a wide variety of technical and operational duties to support the planning, engineering, layout, auction, harvest and reforestation activities over a large geographic area.

GIS Analysts

GIS Analysts manage and conduct advanced spatial data analysis for use in BCTS resource planning and decision making.

GIS Technologists

GIS Technologists create digital, graphic and descriptive products to support resource planning through the use of Geographic Information Systems (GIS) and Relational Database Management Systems.

Business Administrator

The Business Administrator provides specialized technical and administrative services for the Timber Sales Office to support competitive auctions of crown timber. The Business Administrator prepares a wide variety of contracts and tenures, provides financial administration and maintains a variety of systems and services integral to meeting TSO operational goals and objectives.

Business Analyst

The Business Analyst is an accounting specialist responsible for providing financial advice and analysis to support accounting decisions. The Business Analyst works with business, planning and operational staff to coordinate the business planning processes and the associated budget of approximately \$10 million.
