## TIMBER PROCESSING REPORT

For use by those corporations or individuals holding timber sale licences for which the competition was restricted to only Category 2 BC timber sales enterprises (Category 2 TSLs), and issued pursuant to section 20 of the *Forest Act*.

**This report is to be signed on page 3 by a qualified professional.**

### NOTES ON METHOD

- **Volumes to include wood fibre obtained from all sources;**
- **Report all wood fibre volume consumed by the entire timber processing facility for the time period requested;**
- **Facility must be owned or leased by the Licensee and support its registration as a BCTS enterprise (Category 2);**

Section 1 worksheet provides the method for determining the data requested in Section 2. **The information must be provided for the time period requested.**

Name of Licensee:

Period of Time for which data is requested:  
(mm/dd/yyyy)

To

List all Category 2 TSLs held within two years before the first date above:

# Section 1

## Determining Wood Fibre Consumption Volume

Step (1) Determining Volume Consumed using Inventory records:

$$Usage = [Raw\ Material\ Inventory\ at\ Start\ of\ Period] + [Purchases\ for\ period] - [Inventory\ at\ End\ of\ Period]$$

This step provides a means to calculate the volume of wood products consumed during the time period stated on Page 1

	Lumber & LVL (Mfbm)	Logs (m3)	MDF 5/8" count (M sq ft)	Part. Board 3/8"count (M sq ft)	OSB 3/8"count (M sq ft)	Plywood 1/2" count (M sq ft)	Veneer 1/10"count (M sq ft)	Chips (Tonnes)	Sawdust/ Shaving (Tonnes)
Open Inventory									
Plus									
Purchases									
Minus									
Closing Inventory									
Equal Total Usage									

**If inventories are not available for all raw material wood products used, then the volume of purchases for the period is equal to the “usage” by the manufacturing facility**

**Step (2) Conversion to Equivalent Volume of Logs**

Convert the volumes of different forms of wood fibre consumed (Step 1 above) into the equivalent volume of logs.

				M3 Logs
<b>Lumber</b>	Total Mfbm used	<input type="text"/>	Divide by .240	<input type="text"/>
<b>Logs</b>	Total M3 used	<input type="text"/>	Multiply by 1.0	<input type="text"/>
<b>MDF 5/8"</b>	Total M sq ft. used	<input type="text"/>	Multiply by 2.8	<input type="text"/>
<b>Part. Board 3/8"</b>	Total M sq ft. used	<input type="text"/>	Multiply by 2.7	<input type="text"/>
<b>OSB 3/8"</b>	Total M sq ft. used	<input type="text"/>	Multiply by 2.0	<input type="text"/>
<b>Plywood 1/2"</b>	Total M sq ft. used	<input type="text"/>	Multiply by 2.5	<input type="text"/>
<b>Veneer 1/10"</b>	Total M sq ft. used	<input type="text"/>	Multiply by .500	<input type="text"/>
<b>Chips</b>	Tonnes used	<input type="text"/>	Multiply by 1.37	<input type="text"/>
<b>Sawdust/ shavings</b>	Tonnes used	<input type="text"/>	Multiply by 2.59	<input type="text"/>

Total Line 1 to Line 8 = Equivalent Log Volume = **Box (A)**

**Section 2.**

Enter Box A from Section 1 into Box B. **Box B** is the total volume of wood fibre consumed in the above noted time period through the timber processing facility owned or leased by the Licensee AND which supports that Licensee's registration as a BCTS Enterprise, Category 2.

**Box B**

**Log Volume (m<sup>3</sup>)**
