What's New for Version 2.15.08 - July 2008

The following recent upgrades have been made to the ECAS application:

Category 1 - Fixes & business validation refinements

Coast Reference (ECAS30) and Interior Reference (ECAS60)	A fix to include an enhancement in FTA. FTA was changed to save and retain the CP on the FTA902 screen. This affects ECAS if the management unit is different between the file and CP/Mark. ECAS will use the management unit specified at the CP/Mark level if it is different than the management unit specified at the File level. Otherwise ECAS will use the management unit specified at the File level (which means the management unit is the same for the File and CP/Mark).
Coast Tree to Truck (ECAS33)	The CP Volume per log data was not transferring to GAS properly. This has been corrected.
Interior Tabular Roads (ECAS67)	The number of digits in the road section number was not being transferred to GAS properly. This has been corrected.

Category 2 – Enhancements (user-friendliness)

None

Category 3 –Policy upgrades

None

COAST

None

INTERIOR

None

Category 4 –DTD updates

None

Category 5 –Tech spec/documentation updates
