

# Concurrent Residual Harvest System District Application

Date:

Licensee Name and Address:

Dear District Manager:

Please accept this application for an authorization to use the Concurrent Residual Harvest System (CRHS) method of scale for low quality timber to be delivered to a secondary manufacturing facility in respect to the following licences :

Licence(s)	Timbermark

The Scale site(s) and location in which the material will be scaled under this agreement are listed as follows:

Scale Site	Location	Stratum #'s	Timbermark

I agree to abide by the conditions as set out below:

1. As licensee, I may transport CRHS material only to the scale site(s) identified.
2. As licensee, I must identify in advance the CRHS strata into which the material will be classified.
3. As licensee, I will work with Area staff to estimate the species profile that will be delivered into the strata which profile must be approved by Area scaling staff prior to the transport of said material. Timber weighers at the site will be required to stratify the load according to the materials that can be seen. If the load doesn't match the CRHS strata criterion, the timber weigher will be required to stratify the load into

the strata that it does match, even if that stratum isn't a part of the CRHS program. Loads that do not match any strata description at the site must be 'Red Tagged' and taken out of the weighing system.

4. As licensee, I must ensure that the correct CRHS strata are entered into the scale site weight program prior to the delivery of CRHS loads.
5. In order to ensure that the transported volume is sorted into the correct stratum, as licensee, I must identify 'CRHS' on the Load Description Slip (LDS) and the product type for which it is intended, i.e. pulp, pellets, firewood, post and rail, or cants.
6. As licensee, I may not re-sort or resell CRHS material after it has been transported and weighed at the scale site(s) identified on this authorization and I may not deliver the material to any other product type facility than that identified on the Load Description Slip.
7. I understand that I may only apply the CRHS method of scale to cut blocks that are under my tenure responsibility and I must ensure that these cut blocks are approved for harvest under an authorized Cutting Permit.
8. For sites that have a primary manufacturing facility onsite, I have attached a procedure for keeping material bound for the CRHS program separate from other material to this application.
