

# Concurrent Residual Harvest System - Interior District Application

Date:

Licensee Name and Address:

Dear District Manager:

Please accept this application for an authorization to use the Concurrent Residual Harvest System (CRHS) method of scale for low quality timber to be delivered to a secondary manufacturing facility in respect to the following licenses :

Licence	Timbermark

The Scale site(s) and location in which the material will be scaled under this agreement are listed as follows:

Scale Site	Location	Timbermark

The selected strata and the expected species composition are follows:

(X)	Pulp Strata	Species % Mix
	Green HE Pulp <15% (G1&2) >70% Green	
	Green FI/LA Pulp < 15% (G1&2) >70% Green	
	Green Whitewood Pulp < 15% (G1&2)>70% Green	
	Dry Pulp < 15% (G1&2) >50% Dry	
	Cedar Pulp <20% (G1&2)	

(X)	Product Strata	Species % Mix
	Firewood < 15% (G1&2)	
	Cants < 20% (G1&2)	
	Post and Rail < 50% (G1&2)	
	Split Post and Rail < 40% G1&2)	
	Pellets/Bio-Energy < 5%(G1&2)	

(X)	Processed Material	Species % Mix
	Hog Fuel _____ % G1&2	
	Woodchips _____ % G1&2	

# Concurrent Residual Harvest System - Interior District Application

I agree to abide by the conditions as set out below:

1. As licensee, I may transport CRHS material only to the scale site(s) identified.
2. As licensee, I must identify in advance the CRHS strata into which the material will be classified.
3. As licensee, I will work with Area staff to estimate the species profile that will be delivered into the strata which must be approved by Area scaling staff prior to the transport of said material. Timber weighers at the site will be required to stratify the load according to the materials that can be seen. If the load doesn't match the CRHS strata criterion, the timber weigher will be required to stratify the load into the strata that it does match, even if that stratum isn't a part of the CRHS program. Loads that do not match any strata description at the site must be 'Red Tagged' and taken out of the weighing system.
4. As licensee, I must ensure that the correct CRHS strata are entered into the scale site weight program prior to the delivery of CRHS loads.
5. As licensee, I must notify the district prior to commencement of on-site hogging or chipping to provide the district an opportunity to inspect the decked timber to confirm the grade profile. If the district inspection shows that the initial grade estimate is not representative of the grades in the decked timber, the district may select a more appropriate stratum to be used.
6. In order to ensure that the transported volume is sorted into the correct stratum, as licensee, I must identify 'CRHS' on the Load Description Slip (LDS) and the product type for which it is intended, i.e. pulp, pellets, firewood, post and rail, or cants.
7. I may re-sort the material after weighing in order to manufacture more than one secondary product at the site, but I may not resell timber or transport timber off site before manufacture into a secondary product.
8. I understand that each load must be stratified according to the grade profile being delivered.
9. I understand that I may only apply the CRHS method of scale to timbermarks that are under my tenure responsibility and I must ensure that these timbermarks are approved for harvest under an authorized Cutting Permit.
10. For sites that have a primary manufacturing facility onsite, I have included a procedure for keeping material bound for the CRHS program separate from other material with this application.
