## **Range Impact Assessment**

The purpose of this form is to create open communication between Range Agreement holders and Timber Licensees.

### **Form Process Summary**

- 1) Form provided to record outcome of breach of barrier discussion and other potential impacts.
- 2) Timber licensee and range tenure holder fill out form.
- 3) Timber licensee retains form, Range licensee retains form and a copy is forwarded to District Range Agrologist.
- 4) Timber licensee applies for appraisal allowance to address Range Impact as identified on form.
- 5) Timber licensee applies for authority to construct fencing
- 6) If action plan does not include fencing, alternative measures are discussed by the District.

Integrated resource management's goal is the co-operation of resource interests, while achieving sustainable development, for the economic, social and environmental benefit. Ministry of Forests, Lands and Natural Resource Operations (FLNR) will play a supporting role in addressing issues under the new Forest and Range Practices Act (FRPA), rather than leading role, as was under Forest Practices Code. Under FRPA, a method of communication between timber licensee and range tenure holder is called the referral process.

### **Due Diligence**

Under FRPA, Crown resource users must put consideration of impact on other land users into their planning. Foreseeable precautions are to be taken to prevent any conflicts that may occur. Documentation of due diligence is advisable and can include: communication, precautions taken, relevant training of staff, meetings and interactions with other resource users.
