Photo on CD Startup Page:

Relay Mountain, Chilcotin Ranges, southwestern British Columbia. The view is to the north.

Potential hydrocarbon source and reservoir horizons of the southern Nechako Basin are well exposed in the Chilcotin Ranges. The right side of the photo shows shales with lesser conglomerate bands of the type section of the middle Cretaceous Paradise formation of the Taylor Creek Group. The uniformly fine-grained rocks in the middle distance are black shales and brown siltstones of the Tyoax Pass Formation of the Relay Mountain Group. The photographer is standing on striped interbedded tuffs and black shales of the Last Creek Formation. Units are described in Ferri and Riddell (2006, this volume).
