ARCHAEOLOGICAL POTENTIAL:

- Low AS: recommended for ground-truth model
- Moderate: 2000m radius recommended
- High AS: recommended for 5000m radius

All areas are considered to have archaeological potential, although to differing degrees.

BASE MAP FEATURES:

- Water Features, Detert
- Water Features, Indet
- Forest
- Road
- Trail
- Arrowhead Site
- Study Area Boundary

OTHER FEATURES:

- Surveys - Reconnaisance
- Surveys - Detailed
- Trail
- Surveyed Area - Indeterminate

MANAGEMENT RECOMMENDATIONS:

Although we are confident in the results of the modelling process, we recognize that collaborative and adaptive resource management is an ongoing process that must incorporate both further archaeological study and field-based validation. The level of effort appropriate for archaeological study should be negotiated between First Nations, the Archaeological Branch, and the client. The level of effort associated with zones of potential conditions is a recommendation. Management decisions should be made with reference to the accompanying report: "Archaeological Overview Assessment of the Cassiar/Skidpot/LRMP", Millennia Research Limited.
