

	Type	Scope and Description	Considerations	Requirements
Regional	Geographic Information System-Based Archaeological Overview Assessment (GIS-Based AOA)	<ul style="list-style-type: none"> Geospatial analysis to model the potential for archaeological sites within a region Typically generated for broad regions (>100,000 ha) to support future land-use planning Analyzes recorded site locations, Indigenous knowledge, and cultural and environmental variables to develop a predictive model Results in a heat map identifying areas with high or low potential for protected archaeological sites 	<ul style="list-style-type: none"> Benefits: Can be used to assess proposed developments in different sectors; predictive performance can be evaluated against archaeological survey data; AOAs are available to qualified users via Remote Access to Archaeological Data (RAAD); Informed Contributor Layer incorporates Indigenous knowledge Limitations: Relies on high quality archaeological data; bias towards well-studied areas and most visible site types; older models may not incorporate Indigenous knowledge Risks: Become outdated as technology advances and new sites are identified Costs and timing: Typically requires several years; expensive (>\$100,000) 	<ul style="list-style-type: none"> Permit: HCA s. 12.2 Heritage Investigation Permit (<i>new</i>) Consultation: Permit applications are referred to First Nations for input; Nations may share information to enhance GIS-based models Deliverables: Spatial files and report outlining background research, methods, and predictive performance are submitted to Branch and First Nations Guidance: AOA Guidelines
	Desktop Archaeological Overview Assessment (Desktop AOA)	<ul style="list-style-type: none"> Desktop review of relevant sites, Indigenous knowledge, and cultural and environmental variables to assess likelihood that unrecorded sites are present at a specific location Typically used for areas <10,000 ha 	<ul style="list-style-type: none"> Benefits: Analyzes local data to assess archaeological potential of a specific location; it is recommended that First Nations be engaged Limitations: No permit referral process to ensure First Nations engagement; may require subsequent field investigation (PFR or AIA) to confirm assessment Risks: Desktop AOAs not associated with a subsequent HCA permit may not be subject to Archaeology Branch or First Nations review of qualifications, methods, deliverables, or recommendations; quality is dependent on expertise and experience of the researcher Costs and timing: Relatively cost-effective and efficient way to determine the need for further archaeological work 	<ul style="list-style-type: none"> Permit: Not required Engagement: First Nations have requested to be informed, involved, and receive results of AOAs Deliverables: <ul style="list-style-type: none"> Contracts should outline scope and assumptions Reports for desktop AOAs supporting permitted work are submitted to Branch and First Nations <i>Recommended:</i> submit all desktop AOA reports to Branch and First Nations Guidance: AOA Guidelines; AIA Guidelines
Location-Specific	Preliminary Field Reconnaissance (PFR)	<ul style="list-style-type: none"> Field assessment to determine the need for further archaeological work Limited to visual inspection and recording of surface features Subsurface testing, screening, artifact collection, and site alterations are not authorized 	<ul style="list-style-type: none"> Benefits: Effective for identifying certain site types (e.g., culturally modified trees; cultural depressions; exposed midden); supports cost estimates and planning when an AIA is required; it is recommended that First Nations be engaged Limitations: No permit referral process to ensure First Nations engagement; not effective in identifying sub-surface archaeological sites Risks: Not subject to review of qualifications, methods, deliverables, or recommendations; quality is dependent on expertise and experience of researcher; construction delays may result if PFR fails to identify protected sites Costs and timing: Less costly and time-consuming than AIA; may require a subsequent AIA with increased costs and timelines 	<ul style="list-style-type: none"> Permit: Not required Engagement: First Nations have requested to be informed, involved, and receive results of PFRs Deliverables: <ul style="list-style-type: none"> Contracts should outline scope and assumptions Reports for PFRs supporting permitted work are submitted to Branch and shared with First Nations Site forms for any new or revisited sites <i>Recommended:</i> submit all PFR reports to Branch and First Nations Guidance: AIA Guidelines; PFR Best Practices
	Archaeological Impact Assessment (AIA)	<ul style="list-style-type: none"> In-depth field assessment by a qualified archaeologist to identify and assess archaeological sites and evaluate potential impacts of proposed developments <ul style="list-style-type: none"> Inspections identify and assess archaeological sites Investigations support research or recovers information that might otherwise be lost due to site alteration or destruction Subsurface testing and artifact collection are authorized Results in management options to avoid or mitigate impacts 	<ul style="list-style-type: none"> Benefits: Most thorough and effective study to understand potential development impacts to sites; reports are available to qualified users via the Provincial Archaeological Report Library (PARL) Limitations: An archaeologist makes management <i>recommendations</i>; Archaeology Branch provides management <i>direction</i> (requirements) to the proponent Risks: Permitting timelines may impact project schedules; however, AIAs significantly lower risk of construction delays due to unanticipated impacts Costs and timing: Significantly more costly and time-consuming than desktop AOAs and/or PFRs 	<ul style="list-style-type: none"> Permit: HCA s. 12.2 Heritage Inspection Permit (HIP) and/or s. 12.2 Heritage Investigation Permit Consultation: Permit applications are referred to First Nations for input Deliverables: <ul style="list-style-type: none"> Reports, artifact analyses, and spatial files submitted to Branch and First Nations Site forms for any new or revisited sites Repository acceptance of collected material Guidance: AIA Guidelines; HCA Permit Policy Guide
	Site Alteration	<ul style="list-style-type: none"> Any alterations within a protected site require the authority of a s. 12.4 permit, including capping or removing any archaeological deposits or culturally modified trees The Branch may require an AIA prior to authorizing alterations Methods may include archaeological monitoring and artifact collection by a qualified archaeologist 	<ul style="list-style-type: none"> Benefits: Ensures any impacts to protected archaeological sites comply with the HCA Limitations: Permit terms and conditions specify what alterations are authorized; project redesign may be required to minimize impacts Risks: Permitting timelines may impact project schedules Costs and timing: Costs are dependent on scope and nature of proposed impacts 	<ul style="list-style-type: none"> Permit: HCA s. 12.4 Alteration Permit (SAP) Consultation: Permit applications are referred to First Nations for input Deliverables: <ul style="list-style-type: none"> Reports, artifact analyses, and spatial files submitted to Branch and First Nations Site forms for any new or revisited sites Repository acceptance of collected material Guidance: AIA Guidelines; HCA Permit Policy Guide
