

Bridge Component Concrete Standard

Ministry of Forests

January 31, 2023

Information that was previously in the Ministry Bridge Component Concrete Standard has been moved into the Ministry Bridge Standards Manual which forms part of the [Ministry Bridge Guidelines, Standards and Specifications \(BGSS\)](#).

The Bridge Standards Manual includes Ministry standards for structural concrete components, structural grouting, concrete roadside barriers (CRBs), and interlocking concrete blocks.

Ministry CRB and interlocking concrete block standards and manufacturer certification requirements that apply to bridge projects also apply to other Ministry projects such as: retaining walls, road closure gates, cattleguards, roadway designs, etc.

This Bridge Component Concrete Standard will be fully removed from the Ministry webpage in time, after all Ministry documents and drawings have been revised so they no longer reference it.
