

Welcome to PharmaCare 101 – PharmaCare policies

The image is a rectangular graphic with a yellow background featuring various pills and capsules. A dark blue horizontal band across the middle contains the text "PharmaCare Policies" in a large white font, with "PharmaCare 101" in a smaller white font below it. At the bottom left is the British Columbia logo, and at the bottom right is the text "Pharmaceutical, Laboratory & Blood Services Division" and "Ministry of Health".

PharmaCare Policies
PharmaCare 101

 BRITISH COLUMBIA

Pharmaceutical, Laboratory & Blood Services Division
Ministry of Health

Days' Supply Policies

Maximum Days' Supply

Section 5.1
30 DAYS

- First prescription
- Short-term medications
- Expensive medications

100 DAYS

- Drugs for chronic conditions

Travel Supply

Section 5.4

- Exception to refilling too soon policy
- Once per 180 days
- Top up to PharmaCare maximum days' supply for travel outside B.C.

Refilling Too Soon Policy

Section 5.2
14 DAYS

- Remaining supply must be \leq 14 days for refill

First up are the days' supply policies.

The maximum days' supply is the maximum number of days PharmaCare will cover per dispense

- Initial prescriptions, short term use medications (such as narcotics, and antibiotics), and very expensive medications have a 30-day maximum. So the dispense can be covered if it is for 30 days or fewer
- For medications for chronic conditions, the maximum is 100 days.

Our Refill Too Soon policy means that PharmaCare does not cover prescription refills when the patient has more than a 14-day supply remaining from a previous fill. This is to prevent stockpiling, or waste of a drug when a prescriber changes a prescription.

The travel supply policy is an exception to the refill too soon policy. Under this policy, once every 6 months, a person can request a top-up of their prescription up to the maximum days' supply for the purpose of travel outside B.C.

In practice, this means that a person who has 30 days remaining at home of their chronic condition medication, for example, can receive an additional 70 days of medication in order to have the maximum 100 days supply on hand for their travels.

Full Payment Policy

Policy Manual Section 5.10

Plan G:

100% coverage

Plan C:

100% coverage

Plan W:

100% coverage

Fair PharmaCare:

family maximum paid

PharmaCare pays 100%, the pharmacy charges the patient
\$0.00

The Full Payment Policy is an important way that we protect patients.

For people on a 100% paid plan (such as the Psychiatric Medications Plan (Plan G), Income Assistance (Plan C), or First Nations Health Benefits (Plan W) or people who have met their family maximum on the Fair PharmaCare plan, a pharmacy must not charge any additional costs related to full benefit products.

For example, PharmaCare reimburses a \$10.00 dispensing fee for each prescription. While a pharmacy may set its own dispensing fee, for example \$13.00, the pharmacy cannot charge the \$3.00 difference to any person for whom the full payment policy applies.

As a reminder, people can choose any pharmacy they like, based on professional fees, location, hours of operation, service, or any other reason.

Maximum Pricing Policy

Policy Manual Section 5.6

PharmaCare sets a maximum price it will reimburse for brand name and generic drugs

- Manufacturer list price, plus 8% mark-up for most drugs

High-Cost Drugs Policy

Policy Manual Section 5.8

Maximum mark-up for high-cost drugs:

- Manufacturer list price, plus 5% or less

The maximum pricing policy sets a maximum price that PharmaCare will pay for any drug covered through our program. It is based on the manufacturer list price plus an 8% mark-up for most drugs.

For high-cost drugs, under the High-Cost Drugs Policy, the mark-up is limited to 5% or less. For interest, the maximum mark-up for a number of the hepatitis C drugs, such as Harvoni and Epclusa, is 2%.

Low Cost Alternative (LCA) Program

Policy Manual Section 5.11

- Drugs grouped together based on active ingredient and strength
- Maximum accepted list price (MALP) set for each category

Brand drugs: partially covered

Generic Drugs: Fully Covered

Note: reimbursement is subject to the rules of a patient's PharmaCare plan, including any deductibles

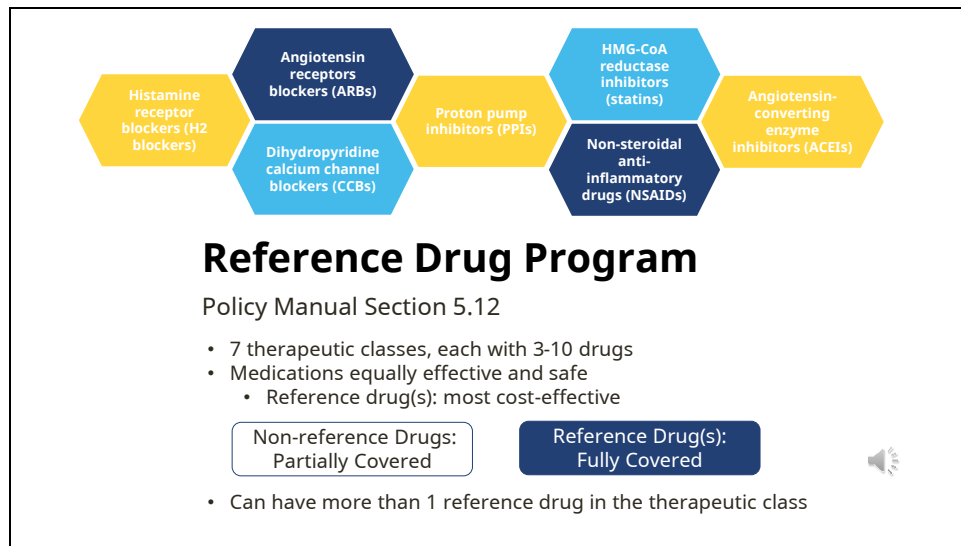

The Low Cost Alternative policy generally applies to drugs that have generic versions. Under the LCA program, drugs are placed in categories based on the drug, strength and formulation. A maximum accepted list price is set for each LCA category, based on the number of manufacturers represented in that category.

In general, lower-priced generics become fully covered as they are within our maximum accepted list price. The more expensive brand-name product becomes partially covered.

Generic drugs have identical active ingredients and deliver the same health benefits as brand name drugs, so buying a lower-priced generic drug does not compromise care.

If a person chooses to get a brand-name product for which there is a low cost alternative, they are required to pay the difference in cost.

The Reference Drug Program is based on therapeutic classes of equally safe and effective drugs. There are currently seven classes in our reference drug program. PharmaCare reviews the cost of the drugs within each category and determines a maximum daily cost it will cover.

Each category has at least one drug that costs no more than the daily maximum price, so it is fully covered. This is a category’s “reference” drug. Since all drugs within the therapeutic class are equally safe and effective, purchasing a lower-priced reference drug does not compromise care.

For example, in the class of statins, all treating the same problem, we would fully cover the cheapest one.

Other drugs in the class, which are more expensive, become the non-reference drugs, and are partially covered.

If a person chooses to get a non-reference drug, they must pay the difference in cost. If there is a clinical reason that prevents a person from taking a reference product, prescribers may apply for Special Authority for full benefit coverage of the non-reference product.

Frequency of Dispensing

Policy Manual Section 8.3

Daily dispensing

- One dispensing fee per drug
- Limited to three per day

Two-to-27-day supply

- One dispensing fee per drug
- Limited to five active prescriptions at one time

The frequency-of-dispensing policy limits the number of dispensing fees that PharmaCare will reimburse for dispensing frequencies of fewer than 28 days.

When a prescriber orders daily dispensing, PharmaCare will pay up to 3 dispensing fees per day.

When a prescriber or pharmacist initiates 2-to-27-day dispensing, PharmaCare will pay up to 5 dispensing fees at any one time.

For pharmacist-initiated 2-to-27 day supplies, the pharmacist must complete a Frequency of Dispensing Authorization form and fax it to the prescriber.

Visit Section 8.3 in the PharmaCare Policy Manual for more information on the Frequency of Dispensing policy.
