**POLICE FINANCING  
IN BRITISH COLUMBIA**  
*. . . a new approach*

---

**RESPONSE to REGIONAL CONSULTATIONS**  
**September 2003**

To UBCM members

Dear members:

Thank you for reviewing the June 2003 discussion paper with respect to police financing in municipalities under 5,000 and unincorporated areas, and for attending the consultation meetings held throughout the province in July and August of this year.

The many comments we have received to date regarding the proposed new approach to police financing have been summarized in the enclosed report. This report will form the basis for further discussions at the 2003 UBCM Convention in Vancouver.

We will be making a presentation on the revised police financing model and answering questions about the model at the UBCM Convention on Monday, September 22, 2003. UBCM executive and government will meet after the Convention to discuss the outcome of this session.

Please note that this report is draft only, and reflects the results of consultations held to date. Before the government finalizes its approach to the restructuring of police financing, there will be opportunity for further input by communities affected by the proposed financing changes. We look forward to receiving your comments respecting the enclosed report.

POLICE FINANCING IN BRITISH COLUMBIA. . . *a new approach*

# Introduction

The current arrangements for the financing of local police services in BC have been viewed as inequitable for many years. Contributions made by property taxpayers to support local police costs range from nothing in municipalities under 5,000 to 100% in municipalities with their own police forces. Over the past 25 years, several joint UBCM/Provincial studies have examined options for change. At a workshop during the 1999 UBCM Convention the inequities in paying for policing were once again identified as an issue that needed to be resolved.

Since 2001, the province has been reviewing the issue of police finance in small municipalities and rural areas:

- the Solicitor General announced his intention to change the arrangement for police financing in BC in 2001,
- a discussion paper entitled: Restructuring Police Financing in Municipalities under 5000 population and Unincorporated Areas was presented to a workshop at the 2002 UBCM Convention in Whistler,
- a discussion paper entitled: Police Financing in British Columbia...A New Approach proposing a new financing arrangement was distributed in June 2003, and
- nine regional consultation meetings on the new police financing approach were conducted during June and July 2003.

This paper has been developed in response to the regional consultations. It describes the improved police financing model and highlights some significant changes made to the provincial proposal since June 2003 – changes designed to address concerns raised by local governments. It includes background information on the calculations used to arrive at police invoice amounts (see Appendices 1 and 2), and new estimates of police invoice costs for jurisdictions (see Appendix 3).

The June 2003 Discussion Paper, previous studies, frequently asked questions, summary of themes expressed by those who attended the consultation meetings, and other background materials are available at the following Web site:

**[www.civicnet.bc.ca/policefinance](http://www.civicnet.bc.ca/policefinance)**

---

## Summary of the 2003 Police Financing Approach

The 2003 approach to police finance for municipalities under 5,000 and unincorporated areas unveiled during the regional consultations has the following key features:

- The total amount that the province will recover has been reduced to approximately \$27 million in 2004, or just half of the \$54 million currently spent to provide local police services in rural areas and municipalities under 5,000.
- Each regional district will, by annual invoice, share in the recovery of the \$27 million on the following basis: the recovery will be shared among all regions in proportion to converted hospital assessments unless the cost for delivering police services in a region is a lesser amount, in which case the lesser amount will be charged. In nearly all cases the amount calculated in relation to converted hospital assessment will be lower than the regional cost of police services. For details on how police costs are determined, see Appendix 1. For details on how the shared amount is determined for each region, see Appendix 2.
- After receiving the provincial invoice, regional districts will be statutorily responsible for apportionment and requisition, using one of two approaches:
  - the standard approach, which will require no regional district bylaw, is to apportion costs among participants in relation to converted hospital assessments. Requisitions would then be delivered to municipalities under 5,000 and to the Surveyor of Taxes on behalf of electoral areas.
  - the alternate approach, which will require a service establishing bylaw under the Local Government Act, is to apportion costs among participants in the manner directed by the bylaw. Regions who wish to deviate from apportionment according to converted values or have other financing plans in mind will want to consider this option.
- The RCMP, in consultation with the province and representatives of small municipalities and rural areas, will make decisions on policing and determine appropriate police service levels. In accordance with community policing principles, the RCMP will consult directly with small municipalities and regional district boards on their policing priorities and develop appropriate police responses to issues in their community.

---

## Changes Based on Regional Consultations

As a result of the nine regional consultation sessions, and the feedback received from individual municipalities and regional districts, the following changes have been made to the new police financing approach:

- **Fifty per cent recovery in legislation:** It is proposed that the 50% province-wide recovery level be included in legislation. This will demonstrate the government's commitment to this level of recovery.
- **Traffic fine sharing will be extended:** For 2004, municipalities under 5,000 and unincorporated areas will benefit from traffic fine revenues at the same level as current beneficiaries, i.e., municipalities over 5,000 population. In 2003, the larger municipalities shared \$10 million of traffic fine revenue in proportion to their local police costs. In 2004, this amount will increase to ensure that the program can be extended without reducing the amount available to larger jurisdictions.
- **The "New Era" commitment on traffic fine sharing:** The government is committed to returning 75% of all traffic fine revenue to local governments to improve community policing and crime prevention. A plan on how this is to be accomplished within this mandate and what it will mean for local governments is being prepared.
- **Police costs based on previous years' data:** Estimates of local police costs for each jurisdiction and the total amount to be recovered province wide will be based on RCMP cost information that is based on previous years' data. For example, recoveries for the 2005 year will be based on costs incurred in 2003. This means that jurisdictions will receive a two year break on increases due to inflation.
- **2004 costs based on data from 2001:** As a transitional measure, invoice amounts for 2004 will be based on 2001 cost information, providing a full three years' saving in inflation in the scheme's inaugural year.
- **Cost for additional non-taxable lands removed:** Costs to police non-taxable lands such as Indian Reserves and parks were identified and deducted from the cost amounts shown in the June 2003 discussion paper. Since June, some regional districts have come forward to identify additional non-taxable areas with identifiable police costs to be deducted. Costs for these regional districts, and therefore the total amount to be recovered province wide, have been adjusted downward to reflect this additional information. Further adjustments can still be made, and officials are advised to contact the province as soon as possible to follow-up on the technical details of estimating the cost of policing in your area.
- **Most recent assessment information will be used:** While police cost information will be based on previous years, each jurisdiction's share of the cost recovery will be determined using the most up-to-date property assessment information available. This is important especially where there have been recent changes of assessment.
- **No Surveyor of Taxes commission:** The Surveyor of Taxes, which acts as the tax collector for regional districts in unincorporated areas, normally charges a commission for its services. The Surveyor of Taxes commission will not apply to the collection of taxes for police services.
- **Cash flow to be streamlined:** In response to concerns that the process could be made more efficient, payments will now be made directly to the provincial government, rather than back through the regional districts. This will relieve regional districts of some administrative and accounting tasks that are not essential to management of the overall scheme.

- 
- **Municipalities will have a choice if tax cannot be collected:** Sometimes taxpayers default on their property taxes. To ensure that municipalities do not bear the risk for uncollected police tax amounts, the new approach will give municipalities a choice in how they handle these situations. In all cases municipalities will remit what they have actually collected as of August 1st each year. Then, on December 31st, municipalities have a choice: they may pay out the full remaining amount of the police invoice or they may remit just the additional amounts that they have been able to collect since August 1st. If a municipality chooses to remit the full invoice amount, the municipality will keep any penalties and interest paid on late taxes that it is able to collect in the future. If a municipality decides to remit only what it has been able to collect by December 31st, the municipality will be required to pay the penalties and interest that it collects on late taxes, with the tax amounts, to the province.
  - **Tax notices will be clear:** The Surveyor of Taxes will create a new line on property tax notices that go to rural property owners to clearly identify the police tax as a separate tax. The province will encourage municipalities to use the same approach and wording on the tax notices that they send to their property owners.
  - **Start up credit to change tax notices:** Municipalities will receive a \$1,000 credit to pay for programming and systems changes needed to include the new line item on their tax notices.
  - **Consultation with RCMP this fall:** Municipalities and electoral areas affected by the new financing approach want the opportunity to provide input regarding the police services they receive. A UBCM / RCMP / Provincial task force will be created this fall to determine how communication should occur at the local level. The Task Force will develop best practices and processes to ensure that small municipalities and electoral areas have input into policing that parallels that of municipalities over 5,000 population.
  - **UBCM / Provincial consultation agreement:** Work will commence on creating a consultation agreement on the management of the new police financing approach into the future. Among the features of a consultation agreement would be agreement on the framework for estimating regional police service costs and shared contributions. The objective is to provide a degree of certainty in the growth of the regional police service contributions by small municipalities and electoral areas over time. No changes to the framework outlined in Appendices 1 and 2 would occur in the absence of consultation. The amounts that we will show in Appendix 3 (i.e., the estimated amounts for 2004) will change with inflation and will not be subject to consultation on that basis alone.

## Next Steps

On September 22, 2003, a session on police financing will take place at the UBCM convention. This session will enable the Solicitor General to confirm the changes documented above and give local government another opportunity to seek clarification on this initiative. Following the convention, the UBCM will meet with the province to finalize the police finance approach. Later in the fall, the province will introduce Police Act amendments in preparation for full implementation of the new approach in 2004.

---

## APPENDIX ONE: Estimating Regional Police Service Costs

Each regional district will, by annual invoice, share in the recovery of the \$27 million (2004 estimate) on the following basis: the recovery will be shared among all regions in proportion to converted hospital assessments unless the cost for delivering police services in a region is a lesser amount, in which case the lesser amount will be charged. In this appendix, we outline how costs for delivering police services in a region are estimated.

Regional police services costs are the sum of local police costs for detachments serving municipalities under 5,000 and unincorporated areas, and they have been estimated using the following four steps. An example, using Central Okanagan Regional District, illustrates how the process works.

- a. Determine the total number of general duty and investigative members that serve municipalities under 5,000 and the electoral areas of the regional district. General duty and investigative members provide local, response-to-call police services. Members that perform highway patrol and specialized functions have been excluded.

In Central Okanagan, 27 general duty and investigative unit RCMP members serve the provincial force area (Peachland and the electoral areas).

- b. Deduct the number of police members that serve non-taxable areas such as Indian Reserves and major parks in the municipalities and unincorporated areas of regional district. This step uses data on the volume of criminal code offences to determine the number of police allocated to the non taxable areas.

Criminal Code statistics show that 20.2% of criminal code offences reported in provincial force areas of the Central Okanagan Regional District occurred on Indian Reserves. Therefore we assume that 20.2% of the total 27 members, or 5.45 members, serve the Indian Reserves. The total members serving Peachland and electoral areas is therefore calculated to be 21.55 members.

**27 total members – 5.45 members for Indian Reserves = 21.55 net members**

At the end of this step the net number of RCMP members serving the regional district has been determined.

- c. Determine an average, per member cost for police services:

An average per member annual cost for police has been calculated to be \$92,591. This figure is the average per member cost paid by municipalities between 5,000 and 15,000 population in 2001. It includes the municipalities' costs for the RCMP personnel (i.e. the municipal 70% share), plus the municipal costs incurred for police buildings and civilian staff.

- d. Multiply the net number of members in each regional district by the average per member cost to get the police cost for the regional district.

For Central Okanagan, the police cost for Peachland and the electoral areas is determined by multiplying the average cost per member by the net number of members:

**\$92,591 per member x 21.55 members = \$1,995,336 police cost for CORD**

The police costs for each regional district is then compared to a shared amount determined in accordance with Appendix 2. The lower of these two amounts is the amount that the regional district will be asked to pay.

---

## APPENDIX TWO: Determining the Shared Amount

Each regional district will, by annual invoice, share in the recovery of the \$27 million (2004 estimate) on the following basis: the invoice will be shared among all regions in proportion to converted hospital assessments unless the cost for delivering police services in a region is a lesser amount, in which case the lesser amount will be charged. In this appendix, we outline how the shared amount is determined. The steps to calculate the shared amount are:

1. Determine the province-wide total cost of police services provided to municipalities under 5,000 and regional district electoral areas.

Once an estimate of the police costs for each regional and the Stikine region have been determined (see Appendix 1), these amounts are added together to determine the total police costs for the provincial police force, province-wide.

Based on 2001 cost information, the province-wide cost of local police services provided by the provincial police force is estimated at: \$53.9 million. This figure excludes policing costs attributed to Indian reserves and major parks.

2. Multiply the total province-wide cost by 50% to give the amount to be recovered.

The provincial government intends to recover 50% of this amount, or \$27 million, in 2004.

$$\text{\$53,934,637} \times 50\% = \text{\$26,967,318 to be recovered in 2004}$$

3. Determine the total converted assessment values in municipalities under 5,000 and the unincorporated areas for each regional district and the Stikine region, and add them together to determine the total assessment for the province as a whole. (\$7.6 billion total assessment<sup>1</sup>)
4. Apportion the amount to be recovered province-wide among the 27 regional districts plus the Stikine region on the basis of the converted assessment values. This provides an initial estimate of cost sharing.
5. Compare the amount calculated at Step 4 with the regional police cost for each region established in Appendix 1. Identify those regional districts whose Appendix 1 costs are lower. The invoice amount for these regional districts is limited to their Appendix 1 amount.
6. Each time a regional district is removed from the sharing calculation as a result of Step 5, repeat Steps 1 through 4 for all remaining regions. This provides the final determination of cost sharing, and the regions affected will be invoiced for their share of the net provincial total.

---

<sup>1</sup> Converted Hospital Assessed Values, based on the 2003 authenticated assessment roll. Hospital assessment values are used because regional districts usually apportion costs to municipalities and electoral areas using hospital assessment information.

---

## APPENDIX THREE: New Estimates of Police Invoice Costs

NOTE: The figures presented in Appendix 3 are estimates of the 2004 invoice costs based on 2003 assessment information. Actual 2004 invoices will be based on 2004 assessment information; therefore, the actual invoice amounts will differ from those presented in Appendix 3. In most cases the differences will be small.
