1. Introduction

As part of the subsection 56(1) exemption granted under the *Controlled Drugs and Substances Act (CDSA)* by Health Canada (“decriminalization”), BC is required to produce quarterly reporting on implementation and early outcomes. This data report provides insight into the early outcomes of decriminalization from four key dimensions: health service utilization, wellbeing of people who use drugs (PWUD), law enforcement, and public awareness and understanding of decriminalization.

Second s.56 Exemption – May 2024¹

The original s.56 exemption came into effect on January 31, 2023, decriminalizing simple possession of small amounts of illegal drugs across BC with some place-based exceptions (e.g., school and childcare premises, airports, motor vehicles). In September 2023, the exemption was amended to add additional exceptions for child-focused spaces. On May 7, 2024, due to concerns about substance use in public settings and at the request of BC, Health Canada replaced the exemption with [a second s.56 exemption](#) which decriminalizes possession of small amounts of illegal drugs only in specific locations, including:

- Private residences
- Places unhoused individuals are legally sheltering (indoor and outdoor locations)
- Overdose prevention, drug checking, and supervised consumption sites
- Places that provide out-patient addiction services like rapid access addiction clinics.

The intention of the second exemption was to balance goals of public health, public safety, and other community interests by prohibiting the possession (a pre-condition to use) of illegal drugs in public spaces, and reinstating police authority to address problematic substance use in public spaces with a possession offense. As outlined in the [Letter of Requirements](#), Health Canada supported a discretionary model that ensured people who were simply in possession of drugs with no associated public safety risk were not subject to arrest or seizure of drugs.

¹ Previous reporting referred to the second exemption implemented on May 2024 as the “new exemption.”

On January 14, 2026, BC announced that it would not seek a renewal of the s.56 exemption enabling decriminalization. The exemption expired on January 31, 2026. BC will continue its reporting until data from the January 2026 period is reported.

--

This report is the sixth quarterly report presenting data following implementation of BC's second s.56 exemption. Law enforcement and health service utilization data have been refreshed to include August 2025 to October 2025.

Background

Harms of Criminalization

Substance use is criminalized in various ways that negatively impact PWUD. Forms of criminalization include formal police interactions (offences), police seizure of drugs, arrests, criminal charges, and convictions. A significant and growing body of research shows that these forms of criminalization do little to deter drug use and instead perpetuate harms to PWUD.^{i,ii,iii,iv,v} Interactions with police may deter PWUD from seeking emergency services or calling for help during overdose situations. Being arrested, charged, or convicted of simple possession negatively impacts an individual's ability to seek and hold employment and housing. Drug seizures are well documented to have negative impacts on PWUD.

Research demonstrates that drug seizures²:

- Are associated with increased overdose risk. A 2024 literature review concluded that most research found an association between police seizure and elevated overdose risk. Studies from the US and Vancouver found an increase in overdose events following drug seizure.^{vi,vii,viii,ix}
- Prevent people from accessing life-saving services, from calling police in unsafe situations, and from calling emergency services during overdoses.^{ii,x}
- Increase harms experienced by PWUD by putting them in unsafe situations to replace their supply (e.g., drug debts, property theft, or sex work).^{i,ii,xi}
- Disproportionately impact equity seeking groups (i.e., Indigenous and other racialized groups, unhoused individuals, people engaged in sex work).^{i,ii,vi}

National Policy Landscape

In recognition of this emerging evidence, governments and organizations across Canada and globally have pursued measures to reduce the harms of criminalization and recognize substance use as a health issue. Key examples of this include:

- In 2006, Vancouver Police Department adopted a policy that provides officers with a broad range of discretion when dealing with possession of illegal drugs. The policy directs police officers to consider an individual's behaviour and risks to public safety when deciding to recommend a criminal charge.

² See Appendix A: Synthesis of Key Evidence on Police Drug Seizure Harms.

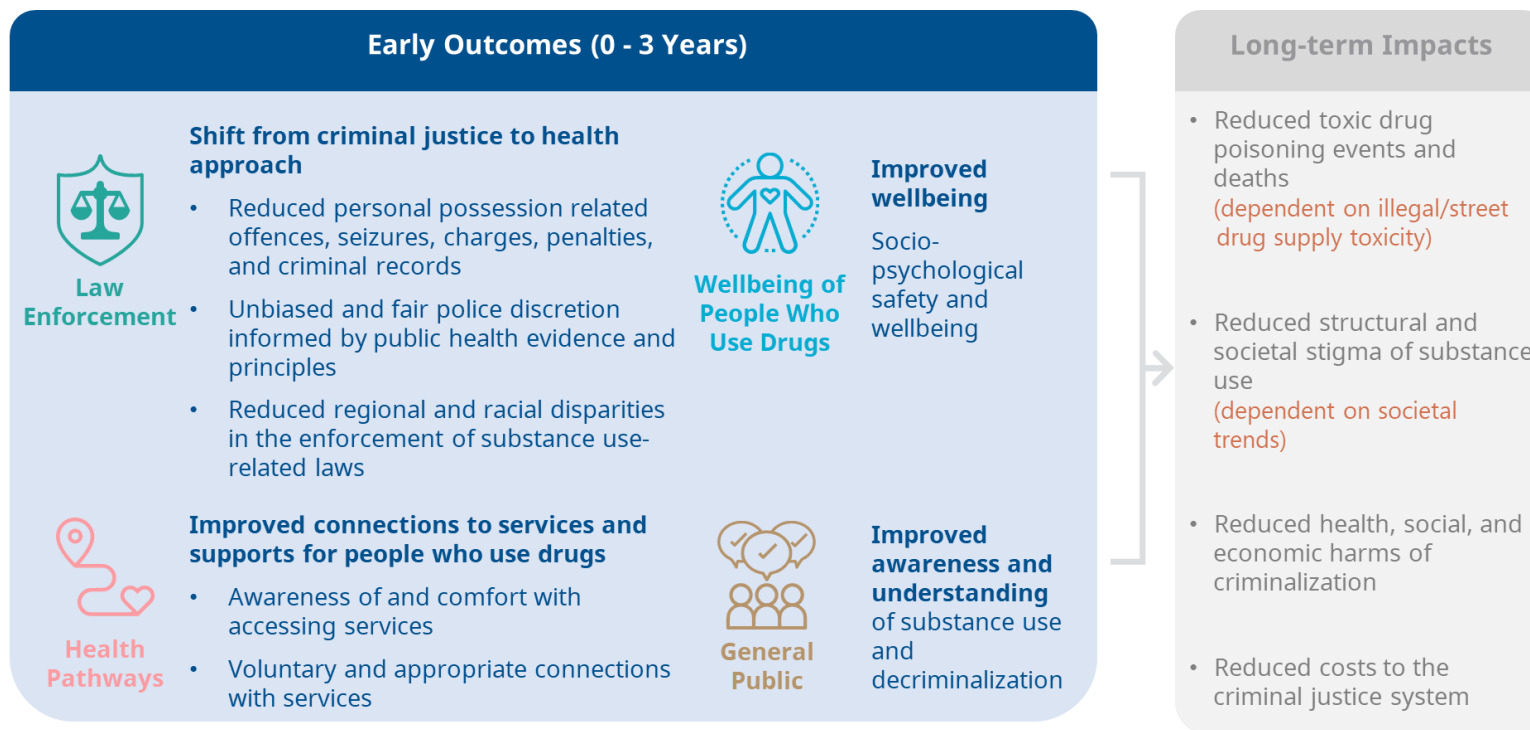

- In 2020, the Public Prosecution Service of Canada (PPSC) established [Guideline 5.13](#) that recognizes drug possession as a health-related issue and requires prosecutors to consider alternatives to charges unless there are serious manifestations of harm (e.g., risk to the safety or wellbeing of children or young persons).
- In 2022, the Government of Canada introduced amendments to the CDSA. Under [section 10.2](#), police officers must consider pre-diversion measures, including whether it would be preferable to take no further action, to warn the individual, or with consent of the individual, refer them to a program/service provider that could assist the individual when attending to an alleged simple possession offence.
- In 2023, PPSC amended [guideline 2.3](#) ("Decision to Prosecute") to increase consideration of the background and personal circumstances of an accused individual in the determination of whether it is in the public interest to prosecute. These factors include Indigenous identity, membership in a racialized or marginalized community, homelessness, poverty and substance-use disorder.

Decriminalization in BC aligned with these broader national trends. It aimed to shift PWUD away from the criminal justice system and towards health and social supports.

Intended Early Outcomes

Within the three-year exemption period, BC has been monitoring four key dimensions of early outcomes:

• Law enforcement	Decriminalization aimed to shift PWUDs away from the criminal justice system towards health and social services. Key metrics for monitoring and evaluation included personal possession-related offences, drug seizures, and charges.
• Wellbeing of people who use drugs	Decriminalization aimed to improve the wellbeing of PWUD by mitigating the harms of criminalization, including formal police interactions and drug seizures due to personal possession.
• Health pathways	Decriminalization intended to improve connections to services and supports for PWUD. Health outcomes were medium- and long-term impacts.
• Public awareness and understanding	Decriminalization aimed to raise awareness on substance use, with the goal of reducing stigma that prevents PWUD from accessing services and supports.

Evidence from other jurisdictions suggests that it takes years for many health and other outcomes to fully emerge. In Portugal, for example, following decriminalization, drug related deaths and newly diagnosed HIV infections decreased significantly over five years.³

The evolving toxicity in the illegal drug supply, primarily with fentanyl and its analogues, is the key driver of drug toxicity deaths. Between 2017 and 2024, fentanyl was detected in 79% to 87% of unregulated drug deaths in BC.⁴ In recent years, illegal drug toxicity has been driving drug related deaths across Canada. From 2022 to 2023, BC experienced a 5% increase and Alberta experienced a 17% increase in drug-related deaths. Both provinces reported a decrease in drug-related deaths in 2024.⁵

³ [Drug Decriminalization in Portugal: Setting the Record Straight](#). Drug Policy Foundation, 2021.

⁴ [BC Coroners Service Dashboard](#)

⁵ [BCCDC Unregulated Drug Poisoning Dashboard](#) and [Alberta substance use surveillance system](#), Government of Alberta.

Current Trends in Toxic Drug Crisis in BC

The Ministry of Health (HLTH), the BC Centre for Disease Control (BCCDC), and other partners continue to regularly monitor health events and service utilization indicators as part of BC's overall surveillance of the toxic drug crisis. While these indicators are highly dependent on external factors (e.g., the increase in illegal drug toxicity), they provide additional context for understanding the early outcomes of decriminalization.

The rate of drug toxicity events and deaths remains high since decriminalization; however, unregulated drug deaths decreased slightly starting in early 2024 and more markedly starting in October 2024. Paramedic-attended opioid overdose events are more variable, and have increased sharply between June and October 2025.

- There were 1,538 unregulated drug deaths in the first ten months of 2025, a 23% decrease compared to the first ten months of 2024 (n= 1,997). Despite this overall decrease, deaths are not decreasing in some areas and among all demographic groups.⁶
- A statistical analysis led by the Ontario Node of the Canadian Research Institute in Substance Use Matters found that the unregulated drug death rate in the first 11 months of decriminalization (February 2023 to December 2023) was not statistically different from the unregulated drug death rate before decriminalization (January 2015 to January 2023).^{xii} Drug toxicity deaths decreased across much of North America in 2024 and 2025. The Public Health Agency of Canada conducted an analysis suggesting that declines in Canada were most likely due to changes in the drug supply, naloxone availability, and a declining population at risk of opioid-related overdose.
- The number and rates of paramedic-attended opioid overdose events remain high and showed an increasing trend in late 2025, reversing a previous declining trend. Paramedic-attended opioid overdoses show geographical variations and fluctuations year over year.⁷ In the first ten months of 2025 there were 16,051 paramedic-attended opioid overdose events, a 10% decrease from 17,794 in the first ten months of 2024.
- The number and rates of paramedic-attended events for people under 19 remain stable, but there has been an increase in unregulated drug deaths in this age group. In the first ten months of 2025 there were 21 unregulated drug toxicity deaths in BC of persons younger than 19 years of age, a 24% increase from 17 deaths in the first ten months of 2024. Since the absolute number of youth deaths is small, more variability is expected. As such, this trend requires further monitoring.

⁶ [BC Coroners Service Dashboard](#). Accessed January 30, 2026

⁷ [BCCDC Unregulated Drug Poisoning Dashboard](#). Accessed January 30, 2026

- The presence of fentanyl, new analogues, non-opioid sedatives (medetomidine), and non-medical benzodiazepines contribute to the toxicity of the unregulated drug supply.⁸

⁸ [BCCSU Drug Checking Project Dashboard](#) and [SUBSTANCE](#). Accessed January 30, 2026

2. Health Pathways

Key Findings

- As part of the implementation of decriminalization, proactive outreach positions across regional health authorities (RHAs) and the First Nations Health Authority (FNHA) were hired and have been facilitating connections to services. These positions will continue beyond the end of decriminalization.
- Visits to overdose prevention and supervised consumption sites have continued to increase since decriminalization.
- The number Take Home Naloxone (THN) intramuscular kits shipped to sites declined starting in October 2024 and began to increase again in late 2025, likely due at least in part to a pilot program making nasal naloxone more available through select THN sites. Further monitoring is required.
- The number of OAT clients appears to have peaked in 2023 and has been in decline.

One of the aims of decriminalization was to encourage connections to health and social supports by reducing stigma and fear associated with criminalization. In addition to broader investments in mental health and substance use (MHSU) services, BC funded the creation of decriminalization proactive outreach positions in RHAs and the FNHA. The objective of these positions has been to facilitate connections to care.

Intended early outcomes of decriminalization included increased awareness of and comfort with accessing health and social services for PWUD, and increased connections to health and social services. The health pathways metrics presented in this report relate to the utilization of low-barrier services. These services tend to be an entry point for PWUD into the broader system of MHSU services, including treatment and recovery, and so are indicative of PWUD comfort and connection with services and supports. Health outcomes of decriminalization are medium- to long-term impacts and are more appropriate for long-term studies.⁹

⁹ Service utilization is impacted by factors outside decriminalization and takes time to change after an intervention. Data needs to be interpreted carefully alongside other factors, including service availability. Evaluations of decriminalization will consider all lines of evidence and analyze decriminalization's contribution to the changes.

Health System Implementation Activities – Proactive Outreach Positions

As part of its decriminalization implementation activities, BC funded proactive outreach positions in each RHA, as well as the FNHA, for a total of 24 full-time positions. The purpose of these positions has been to support new connections to care for PWUD and liaison activities with law enforcement in communities. These positions will continue beyond the end of decriminalization.

RHAs have taken a range of approaches to ensure that these positions best meet community needs.

First Nations Health Authority 5 FTEs	Vancouver Coastal Health 4 FTEs	Fraser Health 4 FTEs	Interior Health 4 FTEs	Island Health 4 FTEs	Northern Health 3 FTEs
<ul style="list-style-type: none"> • 1 per FNHA Region • Virtual peer coordinators and substance use navigators 	<ul style="list-style-type: none"> • Community outreach workers in local overdose outreach teams 	<ul style="list-style-type: none"> • 3 Regional outreach workers in interdisciplinary teams • 1 Coordinator to support law enforcement liaison 	<ul style="list-style-type: none"> • RCMP liaison positions embedded in existing crisis teams 	<ul style="list-style-type: none"> • 4 part-time and 1 full-time (3 FTEs) virtual addiction and recovery workers • 1 full-time proactive outreach nurse 	<ul style="list-style-type: none"> • Social work/peer outreach workers, embedded in existing harm reduction or specialized service teams

RHAs are required to provide quantitative reporting on new connections to services facilitated by proactive outreach positions as part of their funding agreements. These metrics include:

- # of client interactions and # of unique clients served
- % of clients connected to another service
- Qualitative reporting on successes/challenges with reaching new clients and connecting them to care.

Some of the FTEs are also reporting on community engagement/knowledge translation activities. FNHA is also reporting engagement connections with community members and system partners, to reflect their unique role and the community engagement mandate of their funded positions.

Health System Implementation Activities – Proactive Outreach: Activity Highlights

Proactive outreach activities vary across each RHA and the FNHA. These positions have taken a range of approaches to best meet their community needs. These positions will continue beyond the end of decriminalization.

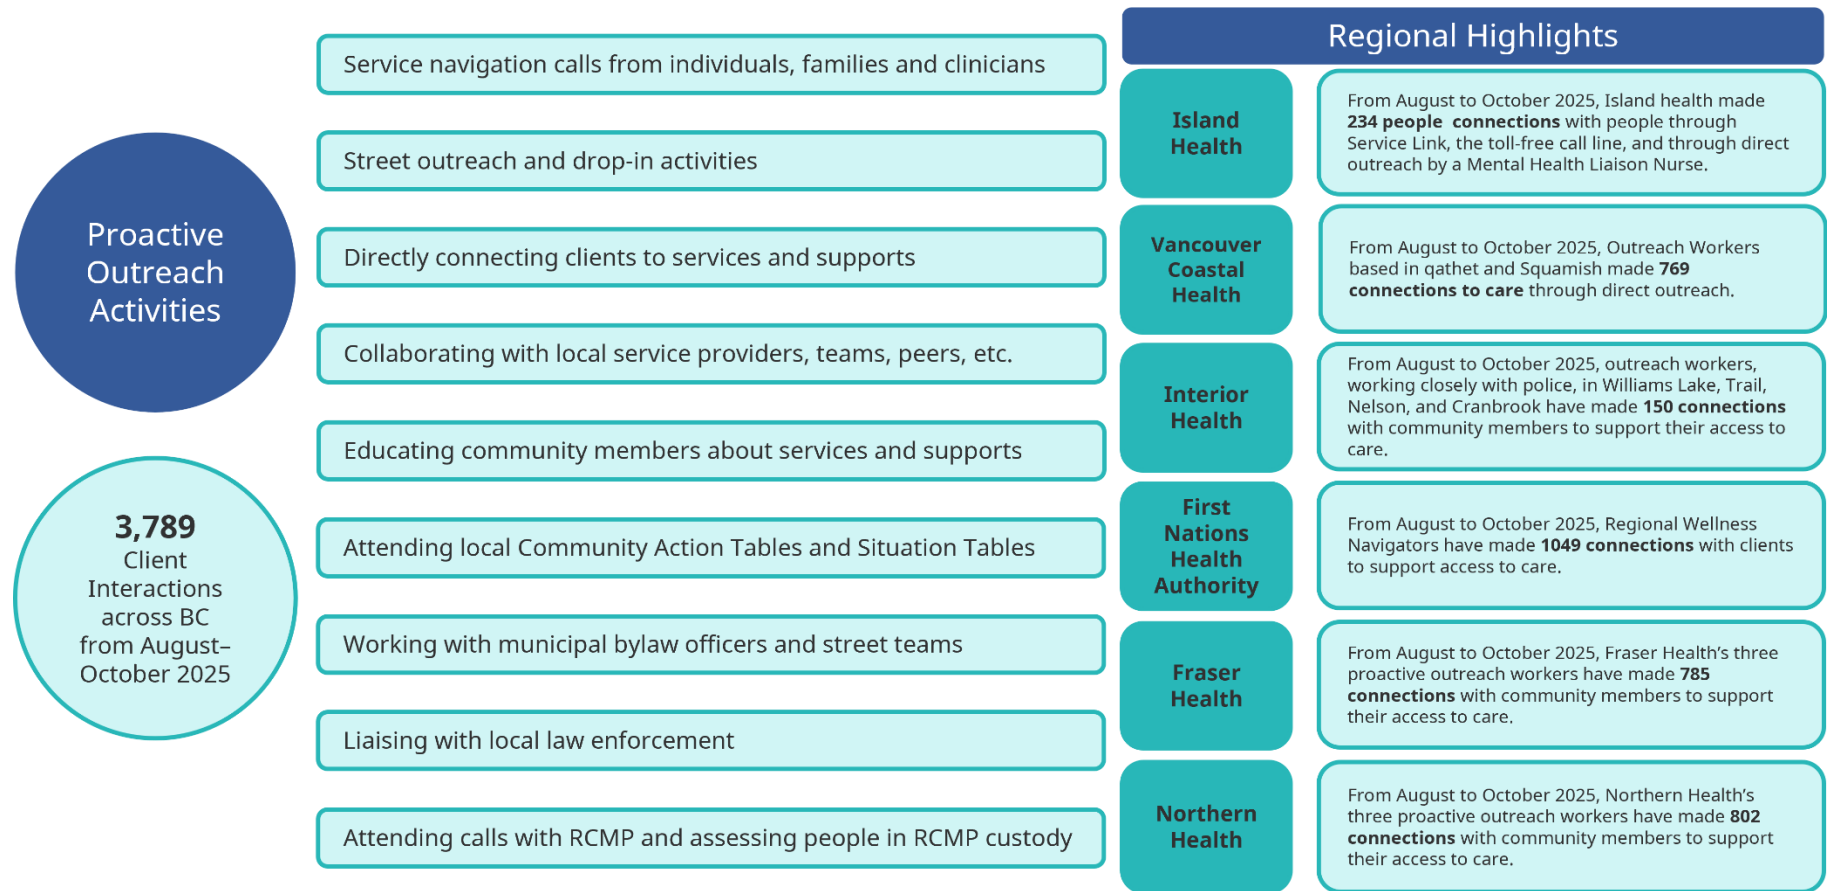

Figure 1. Proactive Outreach Activities and Regional Highlights, August 2025 – October 2025

Health Service Utilization: Visits to Overdose Prevention Sites and Supervised Consumption Sites

Overdose prevention service (OPS) and supervised consumption site (SCS) service utilization continues to trend upward since the implementation of s.56 exemption. BC experienced a new high number of visits in March 2025 with 98,380 visits.

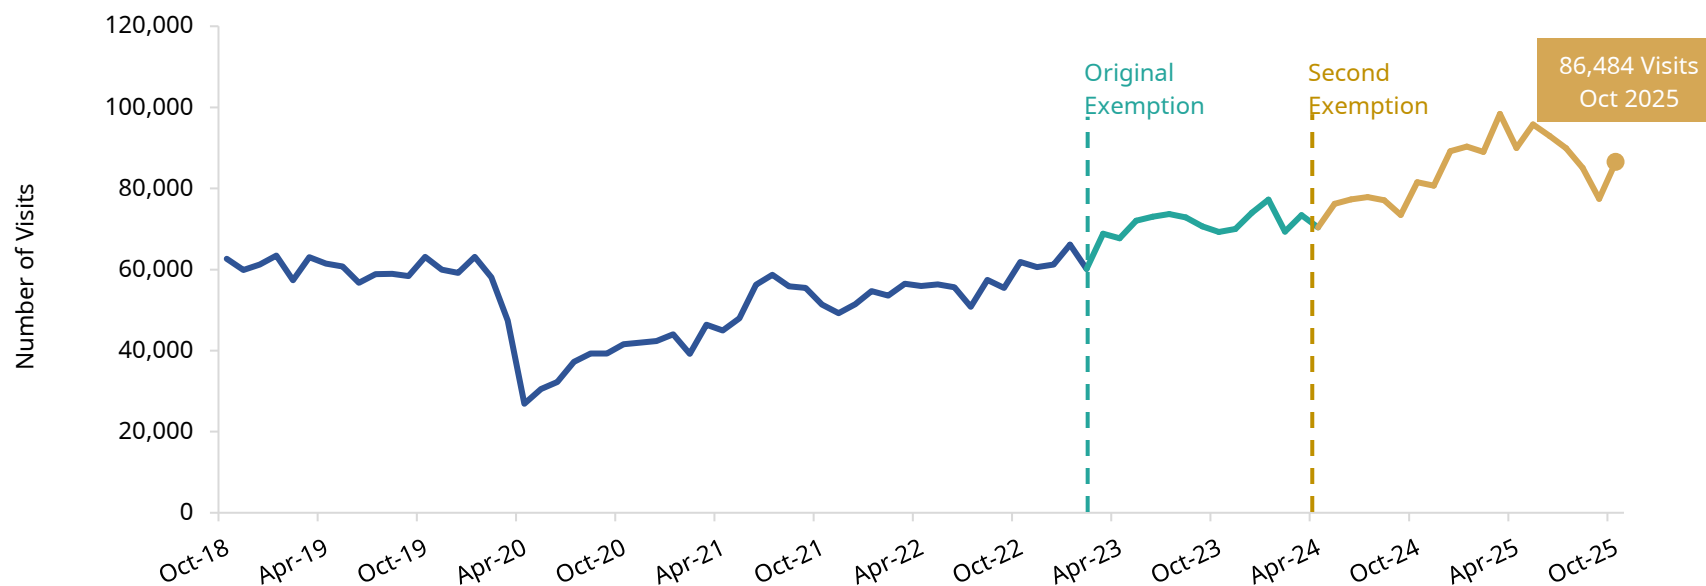

Figure 2. Visits to Overdose Prevention Sites (OPS) and Supervised Consumption Services (SCS) in BC (October 2018 – October 2025)¹⁰

- OPS and SCS provide life-saving services by preventing and responding to illegal drug poisonings.
- In October 2025, there were 86,484 visits to OPS and SCS in BC. The number of OPS and SCS sites in operation have also increased over this time period.
- Utilization of OPS and SCS continue to grow since the implementation of BC's original s.56 exemption, following the trend started in 2020. The trend has also continued after the implementation BC's second s.56 exemption in May 2024.

¹⁰ OPS/SCS visits may be limited by service availability (e.g., number of sites and hours. Numbers include both injection and inhalation OPS/SCS. Source: <http://www.BCCDC.ca/health-professionals/data-reports/substance-use-harm-reduction-dashboard>. Accessed on January 30, 2026.

Health Service Utilization: Demand for Take Home Naloxone (THN)

The monthly number of THN kits shipped to sites has increased since January 2019. In 2024, a total of 498,028 kits were shipped, an increase from 2023 (479,896 kits). In October 2025, there were 2,458 active distribution locations for THN kits.

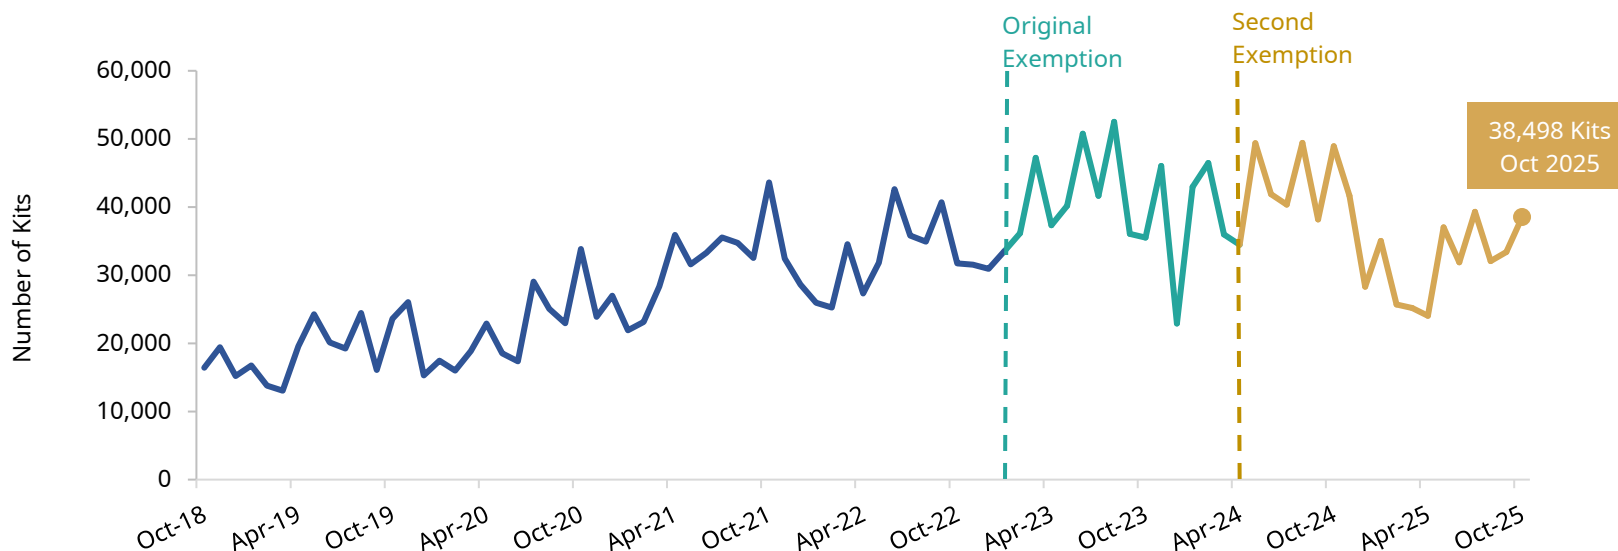

Figure 3. Number of THN kits shipped to sites (October 2018 – October 2025)¹¹

- BC Centre for Disease Control (BCCDC) started the THN program in 2012 to provide training and kits to people at risk of an opioid overdose.
- In October 2025, 38,498 kits were shipped and there were 2,458 THN sites across BC.
- According to BCCDC, THN intramuscular kits shipped to sites declined starting in October 2024 and began to increase again in late 2025, and is likely due at least in part to a pilot program making nasal naloxone made available through select THN sites. Further monitoring is required.

¹¹ Month-to-month variation of demand is expected due to the different number of processing dates, certain sites ordering for more than one month's supply each time, drug alerts, and other factors. Source: <http://www.BCCDC.ca/health-professionals/data-reports/substance-use-harm-reduction-dashboard>. Accessed on January 30, 2026.

Health Service Utilization: Opioid Agonist Treatment (OAT) Uptake

The number of people receiving OAT appears to have peaked and has been in decline.

Figure 4. Number of people receiving OAT by month (October 2018 – October 2025)¹²

- Opioid Agonist Treatment (OAT) refers to a medication-based treatment for people with opioid use disorder.
- In October 2025, there were 22,826 OAT clients in BC.

¹² BC PharmaNet data are provided by Health Sector Information, Analysis, and Reporting Division, BC Ministry of Health. Data represent clients who filled prescriptions at community pharmacies within BC, not all clients who received prescriptions. Recent data may change slightly due to prescription reversals/data quality improvements. Source: <http://www.BCCDC.ca/health-professionals/data-reports/substance-use-harm-reduction-dashboard>. Accessed on January 30, 2026.

Health Service Utilization: Drug Checking Utilization

The number of drug samples tested in BC has increased since 2019. The number of samples tested have remained stable since the implementation of the original s.56 exemption. In October 2025, BC tested 2,975 samples.

Figure 5. Number of samples tested using FTIR spectroscopy at drug checking locations in BC (October 2019 – October 2025)

- Drug checking using Fourier-transform infrared (FTIR) spectroscopy is a harm reduction service that allows people to check what is in their drugs.
- There are 113 locations around the province where one can drop off a drug sample for analysis, 48 of which offer immediate point-of care testing.
- The number of drug samples tested in BC vary according to service capacity (e.g., number of access points, staffing and hours). BC Centre on Substance Use (BCCSU) suggest the decrease in drug checking in the first quarter of 2025 could be related to operational issues on Vancouver Island and normal seasonal variance. Further monitoring is required.¹²

¹³ Source: [BCCSU drug checking reports](#) and [Vancouver Island Drug Checking project reports \(SUBSTANCE\)](#). Vancouver Island Drug Checking Project reporting did not start until September 2020. Accessed on January 30, 2026.

3. Law Enforcement

Key Findings

- Possession offences and drug seizures under 2.5g gradually decreased from 2019 to 2022, and to a much greater extent during BC's original s.56 exemption.
- BC's second s.56 exemption prohibited possession of illegal drugs in public spaces. Early data shows that possession-related offences and drug seizures have increased since the second exemption.
- Since the second exemption, possession-related offences and drug seizures have been higher than the original exemption level, but lower than the pre-exemption level:
 - There was an average of 440 possession offences per month in the first year of the second s.56 exemption (May 2024 – Oct 2025) compared to an average of 165 per month during the original exemption (Feb 2023 – Apr 2024), and 509 per month in the year before decriminalization (Feb 2022 – Jan 2023).
 - There was an average of 61 possession seizures under 2.5g per month in the first year of the second s.56 exemption (May 2024 – Oct 2025) compared to an average of 7 per month during the original s.56 exemption (Feb 2023 – Apr 2024), and 135 per month in the year before decriminalization (Feb 2022 – Jan 2023).
 - There was an average of 181 possession seizures, regardless of weight, in the first year of the second s.56 exemption (May 2024 – Oct 2025) compared to an average of 61 per month during the original s.56 exemption (Feb 2023 – Apr 2024), and 253 per month in the year before decriminalization (Feb 2022 – Jan 2023).
- Of the possession offences reported during the second s.56 exemption period (May 2024 – Oct 2025), most of the reported location types were in public spaces.
- The difference in monthly possession offence and seizure rates between health authority regions in BC were gradually reducing from 2019 to 2022 and to a greater extent since BC's original s.56 exemption; since the second s.56 exemption (effective May 7, 2024), the difference has increased.

Decriminalization aimed to shift PWUD away from the criminal justice system and towards health and social supports. According to BC Corrections data (Table 23 and Table 24), in 2023, less than 1% of community corrections clients and 0% in provincial custody were for drug possession as the most serious offence. As such, selected core metrics in this report focus on other forms of criminalization in policing, including personal possession related offences, defined as formal police interactions, and drug seizures.

Possession Offences in Canada

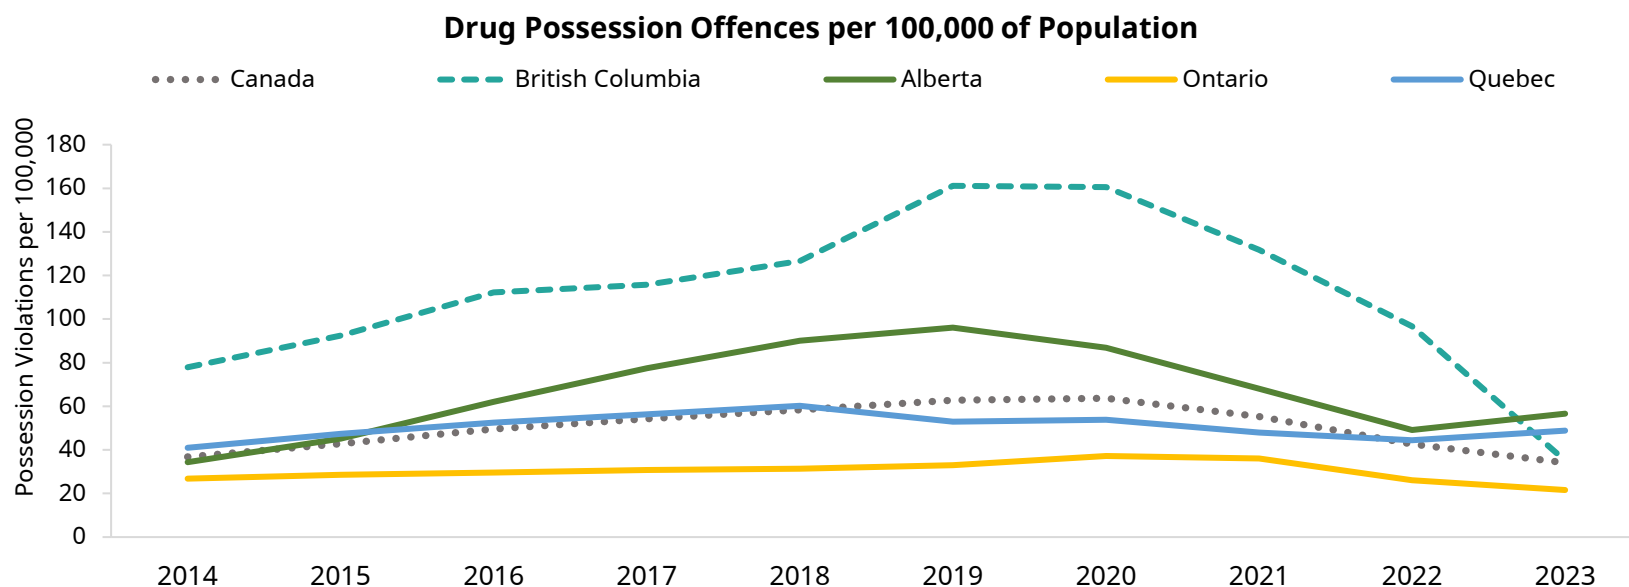

Figure 6. Rate of possession violations/offences (per 100,000 population) of other CDSA substances, 2014 – 2023

According to Statistics Canada, BC had the highest CDSA personal possession offence rate (not including Cannabis Act, trafficking, production, and distribution offences)¹⁴ among Canadian provinces (not including the territories) from at least 2014 until 2022 (

Figure 6). BC's CDSA personal possession offence rate of certain s.56 exemption eligible substances began decreasing in 2020 and was at the same level as the national average by 2023. Statistics Canada suggests that the decrease may be due to changes in policing practices and the introduction of BC's s.56 exemption from the CDSA on January 31, 2023.¹⁵

The following section provides an overview of key law enforcement metrics that capture progress towards decriminalization's objectives. Data from this section is derived from BC's Police Records Information Management Environment (PRIME-BC).

Regional analysis is based on health authority regions to align with public health reporting.

¹⁴ The StatsCan category used in Figure 6 is "Other Controlled Drugs and Substances Act, possession [4130]". This category does not include cocaine possession [4120] or cannabis possession [4140].

¹⁵ Statistics Canada. [Table 35-10-0177-01 Incident-based crime statistics, by detailed violations, Canada, provinces, territories, Census Metropolitan Areas and Canadian Forces Military Police](#), Footnote 18. Accessed: 2024-10-03

Law Enforcement Data – Analysis Methodology

BC has been monitoring key law enforcement metrics indicating progress towards decriminalization’s objectives:

- **Offences**

Offences are police recorded suspected violations of the CDSA. They represent formal police interactions and/or investigations that occur when police suspect there is a crime being committed. An offence may or may not involve an arrest and does not mean that there is a charge or a conviction. In BC, police decide after their investigation if there is sufficient evidence to recommend Crown counsel to charge a suspect. Their recommendation informs a report to Crown counsel (RCC).

Offences are recorded in PRIME-BC. When police respond to, or initiate, a call for service, a file is generated in PRIME-BC and assigned a standard code from UCR to describe the offences and other activities associated with the incident.¹⁶

There are two groups of UCR codes relating to the CDSA relevant to the monitoring and evaluation of decriminalization:

- Possession
 - CDSA incidents involving personal possession (section 4(1))

- Trafficking
 - CDSA incidents involving possession for the purpose of trafficking (section 5(2))
 - CDSA incidents involving trafficking of illegal drugs (section 5(1))

BC is monitoring relevant files in PRIME-BC to determine the number of CDSA offences. For incidents associated with possession, BC monitors both incidents where possession is the most serious offence (MSO) and incidents where

¹⁶ The Uniform Crime Reporting Survey (UCR) was designed by Statistics Canada to measure the incidence of crime and its characteristics. An offence is used as a unit of count for the purposes of the statistical reporting.

possession is not the MSO but a secondary offence.¹⁷ This report focuses on incidents where possession is the MSO as it most accurately captures interactions/investigations initiated by a simple possession offence.

This report refers to incidents where possession is the MSO as “possession offences” and incidents where trafficking is the MSO as “trafficking offences.” Information on whether drugs are seized during a call for service are also recorded in PRIME-BC. Other recorded details include (if available) the type of location where the offence takes place, drug type involved in the offence, and amount for each type of drug seized.

Possession offences include specific UCR codes police officers use to describe the perceived types of substances involved. The codes, however, are broad and do not exactly align with the types of substances exempted as part of BC’s s.56 exemption. Using this information, analysts are able to classify offences into three categories: (1) offences involving *only* s.56 exemption eligible substances (opioids, cocaine, methamphetamine or MDMA, as set out in the Annex to the s.56 exemption), (2) offences involving *both* s.56 exemption eligible substances and non-s.56 exemption eligible substances, and (3) offences involving *only* non-s.56 exemption eligible substances. For reporting clarity, analysts grouped category (1) and category (2) into a new category (4) offences involving, at minimum, s.56 exemption eligible substances.¹⁸

- **Drug Seizures**

Some offences may involve the confiscation of drugs (“drug seizures”) from an individual. Drug seizures can cause harm to PWUD.¹⁹ Under certain circumstances, possession of certain illegal drugs under a cumulative weight of 2.5g is currently exempted from the CDSA, including drug seizure. Possession over the 2.5g threshold, as well as trafficking, regardless of the location or amount of drugs involved, remains illegal.

To effectively monitor the implementation of decriminalization, it is essential to calculate the *cumulative total amount* of exempted substances in each seizure incident due to the cumulative nature of the threshold policy. In a CDSA

¹⁷ When there are two or more violations of the law in a single incident, the Uniform Crime Reporting Survey specifies that “the most serious offence” is published for the purposes of statistical reporting. For example, violent offences (e.g. assault) are more serious than non-violent offense (e.g. CDSA violations).

¹⁸ Data analysts from Vancouver Police Department (VPD) and RCMP analyzed a sample of possession offence files identified as having *primarily* s.56 offences and found that approximately 80% of the files contained only s.56 exemption eligible substances.

¹⁹ See Appendix A: Synthesis of Key Evidence for a synthesis of key evidence on the harms associated with the criminalization of substance use.

offence, multiple seizure records are associated with the same offence file if multiple drug items are seized. Each type of drug and each packaged item seized are recorded as separate items. HLTH collaborated with its policing partners to develop a methodology of offence-based drug seizure analysis where all seizure records related to an offence are aggregated to calculate the cumulative weight of exempted substances seized in each offence. This methodology better represents the total amount of exempted drugs held by individual(s) in each offence and enables quality monitoring on the implementation and outcomes of decriminalization.²⁰

BC is monitoring this cumulative seizure dataset to determine the number of drug seizure incidents initiated by a CDSA offence. For this report, drug seizure incidents where possession is the MSO are called “possession seizures” while drug seizure incidents where trafficking is the MSO are called “trafficking seizures.”

- **Charges**

After an investigation and review of available evidence, police in BC may recommend to the Crown Counsel to charge an individual for a specific crime. Crown counsel may choose to accept or decline police recommendations based upon their review of evidence and prosecution guidelines.

Policing partners have recommended assessing charge-related data on an annual basis. In this report, offences that have been cleared by charge—defined as offences where at least one suspect has been identified and either a charge has been laid, or recommended to be laid, against the suspect in connection with the offence—are provided by Statistics Canada’s incident-based crime statistics.^{21,22}

²⁰ Previous seizure datasets relied on seizure records as a unit of analysis and therefore, did not provide detailed information on the cumulative total quantity held by the individual(s) involved.

²¹ Offences cleared by charge are [defined as offences where at least one accused has been identified and either a charge has been laid, or recommended to be laid, against the accused in connection with the offence](#). The charge may or may not align with the most serious offence recorded for an incident. Accessed 2025-04-23 Accessed on April 23, 2025

²² See Table 20. Number of Offences, Seizure incidents involving exempted drugs (regardless of amount), and Offences Cleared by Charge, where possession is the most serious offence, by police in BC (2019 – 2024). Data from Statistics Canada are from [Table 35-10-0177-01 Incident-based crime statistics, by detailed violations, Canada, provinces, territories, Census Metropolitan Areas and Canadian Forces Military Police](#). The indicator used to represent “recommended charges” are the number of incidents “cleared by charge” for the following offences: heroin, possession [4110]; opioid (other than heroin), possession [4170]; cocaine, possession [4120]; Methamphetamines (crystal meth), possession [4150]; Methylenedioxyamphetamine (ecstasy), possession [4160]; Other Controlled Drugs and Substances Act, possession [4130].

PRIME-BC

PRIME-BC is a live case management environment that updates as investigations are being completed. As such, coding for some offences could change between possession and trafficking as investigations progress. Further, some privatized files may become available or vice versa.

Police-reported crime statistics are released by Statistics Canada on a routine and scheduled basis. Metrics in this report are only intended to satisfy the requirement under BC's section 56(1) CDSA exemption. The offence data presented in this report is not considered complete and may be subject to changes in UCR classification. Changes to numbers are expected, especially for recent reporting periods.

Limitations

In practice, formal police interactions/investigations involving possession for trafficking are sometimes coded as possession until further investigations are completed. This means that the number of possession offences could overestimate the number of actual possession incidents. As investigations are completed, minor updates to the data will be reflected in future reporting.

Possession Offences

Possession offences gradually decreased from 2019 to 2022, and to a much greater extent during BC’s original s.56 exemption. Since the second s.56 exemption (effective May 7, 2024), the average number of monthly possession offences has increased to approximately 86% of the pre-exemption level (2022).²³

Figure 7. Number of offences, where possession is the most serious offence, by all police in BC (January 2019 – October 2025)²⁴

²³ “Original exemption” refers to BC’s s.56 exemption in place from January 31, 2023 to May 6, 2024. “Second exemption” refers to BC’s s.56 exemption that came into effect on May 7, 2024.

²⁴ An offence represents a formal police interaction or investigation based on a particular type of suspected crime. An offence may or may not involve an arrest. It is not a charge nor a conviction.

²⁵ Due to the methodology of accounting for unique persons in possession offence files between the RCMP and municipal police, some unique persons may be double-counted and therefore overestimated.

- There was an average of 440 possession offences per month during the second s.56 exemption period (May 2024 – Oct 2025).
- Approximately 285 unique persons per month were involved in a possession offence over this time.²⁴
- The second exemption average monthly count of possession offences (440 possession offences per month) was significantly lower ($p < 0.05$) than the average monthly count in the year before decriminalization (509 possession offences per month in Feb 2022 – Jan 2023).
- According to data analysts from the Vancouver Police Department (VPD), there was a significant increase in the number of police-reported possession offences in VPD's jurisdiction starting February 2025. This increase can be partially attributable to VPD's dedicated task force in Vancouver's Downtown Eastside neighbourhood that launched on February 13, 2025 (called "Task Force Barrage"). The task force involved the deployment of additional policing resources to improve public safety in the Downtown Eastside by preventing crime, increasing police visibility, and addressing street disorder.²⁵

²⁶ [VPD News release on "Task Force Barrage"](#) from May 22, 2025 accessed on July 8, 2025.

There were 1,573 possession offences in BC between August and October 2025. This is 227% higher than the average counts of the same August - October period (n=481) during the original exemption (2023-2024), and 7.5% higher than counts from the August - October period (n=1,463) in the year before decriminalization (2022).

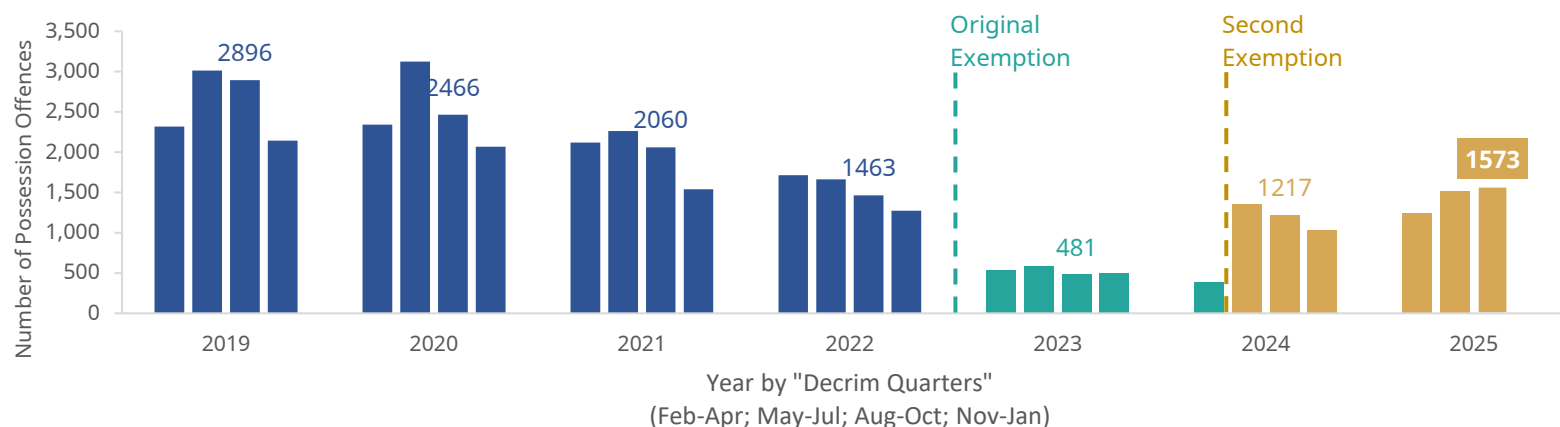

Figure 8. Offences per “Decrim Quarter”, where possession is the most serious offence, by all police in BC (February 2019 – October 2025)^{27,28,29}

- 75% (n = 1,176 of 1,573) of possession offences reported over May 2025 – October 2025 involved at least one exemption eligible substance.²⁹
- The increase in possession offences for this reporting quarter can be partially attributed to the increase from VPD jurisdiction due to “Task Force Barrage.”

²⁷ “Original exemption” refers to BC’s s.56 exemption in place from January 31, 2023 to May 6, 2024. “Second exemption” refers to BC’s s.56 exemption that came into effect on May 7, 2024.

²⁸ An offence represents a formal police interaction or investigation based on a particular type of suspected crime. An offence may or may not involve an arrest. It is not a charge nor a conviction.

²⁹ “Decrim Quarters” refer to Feb-Apr, May-Jul, Aug-Oct, Nov-Jan. These quarters enable ease of analysis and align with when the original s.56 exemption came into effect on January 31, 2023.

³⁰ These offences could include substances not exempted by the s.56 exemption.

For each possession offence, a location type of where the offence took place is identified and recorded by the reporting police officer. Of the possession offences reported during the second s.56 exemption period (May 2024 – October 2025), most of the reported location types (77.8%) were in public spaces.

Figure 9. Proportion of offences, where possession is the most serious offence, by officer-reported location type (May 2024 – October 2025).^{31,32,33}

³¹ “Original exemption” refers to BC’s s.56 exemption in place from January 31, 2023, to May 6, 2024. “Second exemption” refers to BC’s s.56 exemption that came into effect on May 7, 2024.

³² An offence represents a formal police interaction or investigation based on a particular type of suspected crime. An offence may or may not involve an arrest. It is not a charge nor a conviction.

³³ Location types are identified in each offence from a pre-determined list by the reporting officer. Categories are defined by the Canadian Centre for Justice and Community Safety Statistics (CCJCSS) and are used by all police services.

Possession Offence per 100,000 Residents Over Time, by Health Authority Region

The difference in possession offence rates between regions were gradually reducing from 2019 to 2022 and to a greater extent since BC's original s.56 exemption; since the second s.56 exemption (effective May 7, 2024), the difference has increased.

Figure 10. Offences per 100,000 Adult (18+) BC residents, where possession is the most serious offence, by health authority region (January 2019 – October 2025)^{34,35}

³⁴ Rates were calculated using population estimates from BC Stats: <https://www2.gov.bc.ca/gov/content/data/statistics/people-population-community/population/population-estimates>.

³⁵ Rates do not include RCMP Highway Patrol, RCMP District and E-Division Units, RCMP Combined Forces Special Enforcement Units, RCMP West Coast Marine Detachment, and RCMP Integrated Homicide Investigation Team.

- During the original s.56 exemption, rates of possession offence decreased significantly in all health authority regions of BC. Since the second exemption, rates of possession offences increased, although to different extents for each health authority region.
- During the original s.56 exemption (Feb 2023 – Apr 2024), the average monthly rate of possession offence in BC was 3.6 per 100,000 adult residents. This rate increased to 9.2 per 100,000 adult residents during the second exemption (May 2024 – Oct 2025).
- The average monthly rates of possession offences during the second s.56 exemption increased in BC compared to the rates during the original s.56 exemption ($p < 0.05$).
- The average monthly rate of possession offences during the second s.56 exemption in Fraser and Interior health authority regions are significantly different ($p < 0.05$) from their respective average monthly rate in the year before the original s.56 exemption (Feb 2022 – Jan 2023). This indicates that possession offences in these regions are not comparable to average pre-decriminalization levels in 2022.
- The average monthly rate of possession offences during the second s.56 exemption Northern, Vancouver Coastal and Island health authority regions are not significantly different ($p > 0.05$) from their respective average monthly rate in the year before the original s.56 exemption (Feb 2022 – Jan 2023). This indicates that possession offences are comparable the average pre-decriminalization levels in 2022.

Drug Seizures below the Threshold (2.5g) due to Possession of Exempted Substances

Possession seizure under 2.5g of exempted drugs gradually decreased from 2019 to 2022 and to a much greater extent during the original s.56 exemption. Since the second s.56 exemption (effective May 7, 2024), the average monthly possession seizures below 2.5g have increased to 45% of the pre-exemption level (2022).^{36,37}

Figure 11. Seizure incidents involving exempted drugs, under 2.5g, where possession is the most serious offence, by all police in BC (January 2019 – October 2025)³⁸

- There were an average of 61 possession seizures incidents of amounts under 2.5g in the first year of BC’s second s.56 exemption (May 2024 – October 2025).
- The second exemption average monthly count of possession seizures (61 possession seizures per month) is significantly lower ($p < 0.05$) than the average in the year before decriminalization (135 possession seizures per month).

³⁶ “Original exemption” refers to BC’s s.56 exemption in place from January 31, 2023 to May 6, 2024. “Second exemption” refers to BC’s s.56 exemption that came into effect on May 7, 2024.

³⁷ Possession drug seizures are drug seizures made by police where the most serious offence on record is simple possession. Number of drug seizures do not include amounts that were unquantifiable (i.e., no weight on record).

³⁸ The seizure amount in this dataset represents the cumulative total amount of exempted drugs seized.

There were 264 possession drug seizures under 2.5g in BC between August and October 2025. This is 1,110% higher than the average counts of the same August - October period (n=22) during the original exemption (2023-2024), and 25% lower than counts from the August - October period (n=353) in the year before Decriminalization (2022).

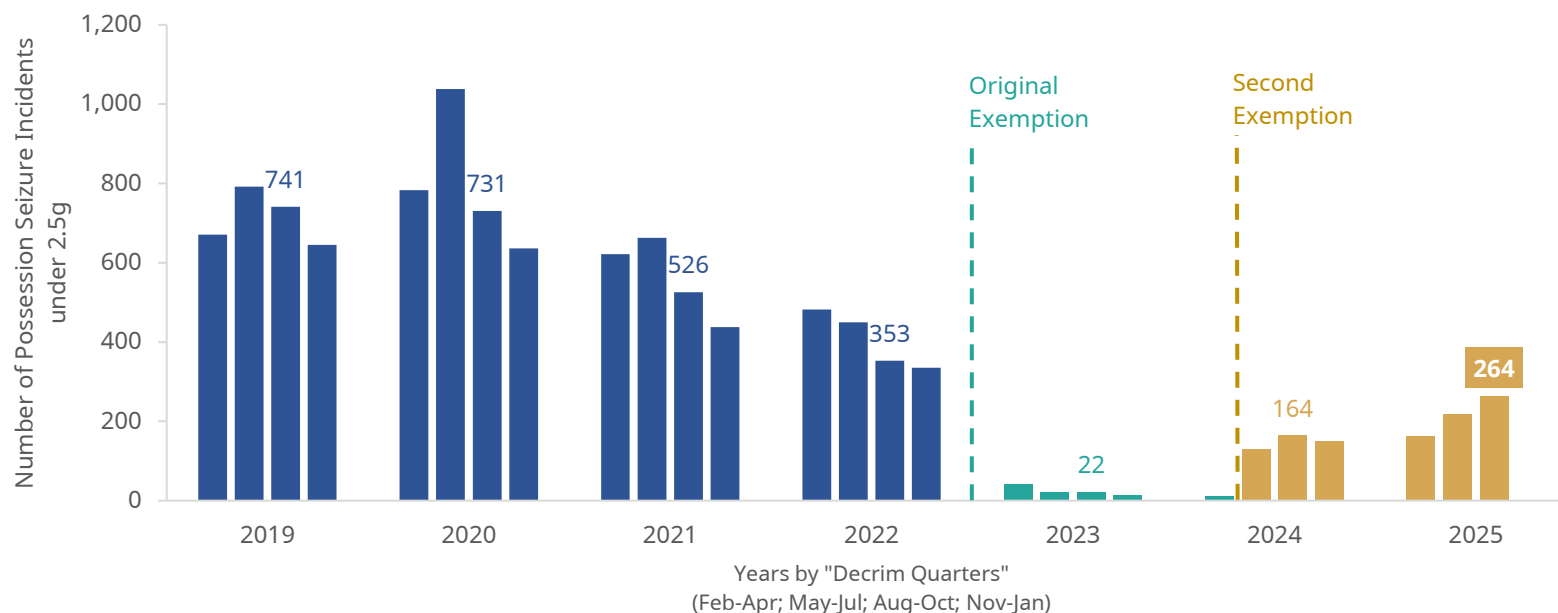

Figure 12. Seizure incidents involving exempted drugs per “Decrim Quarter”, under 2.5g, where possession is the most serious offence, by all police in BC (February 2019 – October 2025)^{39,40,41}

³⁹ “Original exemption” refers to BC’s s.56 exemption in place from January 31, 2023 to May 6, 2024. “Second Exemption” refers to BC’s s.56 exemption that came into effect on May 7, 2024.

⁴⁰ The seizure amount in this dataset represents the cumulative total amount of exempted drugs seized.

⁴¹ “Decrim Quarters” refer to Feb-Apr, May-Jul, Aug-Oct, Nov-Jan. These quarters enable ease of analysis and align with when the original s.56 exemption came into effect on January 31, 2023

Drug Seizure, Regardless of Weight, Due to Possession of Exempted Substances

Possession seizure overall gradually decreased from 2019 to 2022 and to a much greater extent during BC’s original s.56 exemption. Since the second s.56 exemption (effective May 7, 2024), the average monthly overall possession seizures have increased to approximately 72% of 2022 levels.

Figure 13. Seizure incidents involving exempted drugs, where possession is the most serious offence, by all police in BC (January 2019 – October 2025)^{42,43}

- In the first year of BC’s second s.56 exemption (May 2024 – Oct 2025), there were an average of 181 possession seizures (regardless of weight) per month.
- The second exemption average (181 possession seizures per month) is significantly lower ($p < 0.05$) than the average in the year before decriminalization (253 possession seizures per month).

⁴² “Original exemption” refers to BC’s s.56 exemption in place from January 31, 2023 to May 6, 2024. “Second exemption” refers to BC’s s.56 exemption that came into effect on May 7, 2024.

⁴³ Possession drug seizures are drug seizures made by police where the most serious offence on record is simple possession.

There were 730 possession drug seizures (regardless of weight) in BC between August and October 2025. This is 198% higher than the average counts of the same August – October period (n=170) during the original exemption (2023-2024), and 2.5% higher than counts from the August - October period (n=712) in the year before Decriminalization (2022)

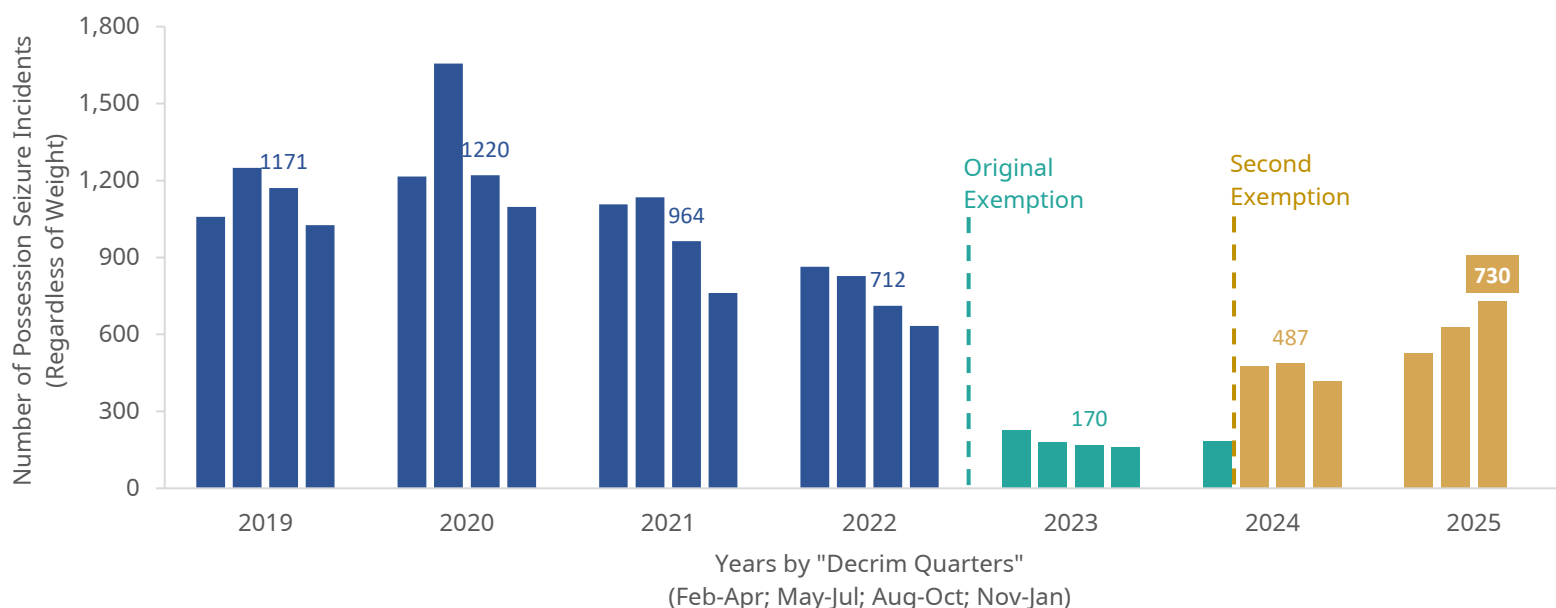

Figure 14. Seizure incidents involving exempted drugs per “Decrim Quarter”, where possession is the most serious offence, by all police in BC (February 2019 – October 2025)^{44,45}

⁴⁴ “Original exemption” refers to BC’s s.56 exemption in place from January 31, 2023 to May 6, 2024. “Second exemption” refers to BC’s s.56 exemption that came into effect on May 7, 2024.

⁴⁵ Decrim quarters refer to Feb-Apr, May-Jul, Aug-Oct, Nov-Jan. These quarters enable ease of analysis and align with when decriminalization came into effect on January 31, 2023.

Possession Seizures by Weight Range

The dominant weight range for possession seizures shifted from 0.01-2.5g before decriminalization to >10.0g after the implementation of BC’s original s.56 exemption. Since the second s.56 exemption, 36% of measurable possession seizure incidents were under 2.5g, and 40% have been over 10g.⁴⁶

Figure 15. Proportion of seizure incidents involving exempted drugs, in various cumulative weight ranges, where possession is the most serious offence, by all police in BC (February 2019 – October 2025)^{47,48}

- The median amount seized for a possession offence was 1.90g in Feb 2022 - Jan 2023 (pre-implementation) and shifted to 10.10g in Feb 2023 – Jan 2024 (first year of original exemption). The median amount seized decreased to 6.87g in Feb 2024 – Jan 2025 (last 3 months of original exemption; first 9 months of second exemption). See Table 14 for more information on annual statistics.
- From Aug 2025 to Oct 2025, 37% of measurable possession seizure incidents were under 2.5g, and 42% were over 10.0g. See Table 13 for detailed counts of seizures by weight range.

⁴⁶ Possession drug seizures are drug seizures made by police where the most serious offence on record is simple possession.

⁴⁷ “Original exemption” refers to BC’s s.56 exemption in place from January 31, 2023 to May 6, 2024. “Second exemption” refers to BC’s s.56 exemption that came into effect on May 7, 2024.

⁴⁸ The seizure amount in this dataset represents the cumulative total amount of exempted drugs seized. Incidents with no recorded weights are not included.

Possession Seizures per 100,000 residents, Regardless of Amount, Over Time, by Health Authority Region

The difference in possession seizure rates between regions was gradually reducing from 2019 to 2022 and to a greater extent since BC's original s.56 exemption; since the second s.56 exemption (effective May 7, 2024), the difference has increased.

Figure 16. Seizure incidents involving exempted drugs, regardless of amount, per 100,000 adult (18+) BC residents, where possession is the most serious offence, by health authority region (January 2019 – October 2025)^{49,50}

⁴⁹ Rates were calculated using population estimates from BC Stats: <https://www2.gov.bc.ca/gov/content/data/statistics/people-population-community/population/population-estimates>.

⁵⁰ Rates do not include RCMP Highway Patrol, RCMP District and E-Division Units, RCMP Combined Forces Special Enforcement Units, RCMP West Coast Marine Detachment, and RCMP Integrated Homicide Investigation Team.

- After the implementation of BC's original s.56 exemption, the average monthly rate of possession seizures (regardless of weight) decreased in all health authority regions of BC. The average monthly rate of possession seizures increased for all regions after the implementation of the second s.56 exemption ($p < 0.05$), although to different extents for each region.
- During the original s.56 exemption (Feb 2023 – Apr 2024), the average monthly rate of possession seizure in BC was 1.3 per 100,000 adult residents. This rate increased to 4.2 per 100,000 adult residents during the second exemption (May 2024 – Oct 2025).
- The average monthly rate of possession seizures during the second s.56 exemption in all health authority are significantly different ($p < 0.05$) from their respective average monthly rate in the year before the original s.56 exemption (Feb 2022 – Jan 2023). This indicates that possession seizures are not comparable to average pre-decriminalization levels in 2022. The direction of this difference; however, is not the same for each region.
 - For Fraser, Interior, Island, and Northern health authority regions, the average monthly rate of possession seizures during the second s.56 exemption period was observed to be lower than the average pre-decriminalization levels.
 - For Vancouver Coastal health authority region, the average monthly rate of possession seizures during the second s.56 exemption period was observed to be higher than the average pre-decriminalization level.

Trafficking Offences

Trafficking illegal substances of any amount is and has remained illegal during all policy phases.⁵¹

Trafficking offences decreased from 2019 to 2022. Average monthly trafficking offences during the original s.56 exemption were consistent with 2022 levels. Average monthly trafficking offences during the second s.56 exemption has exceeded average monthly levels in 2022.

Figure 17. Number of offences, where trafficking is the most serious offence, by all police in BC (January 2019 – October 2025)⁵²

- During BC's second s.56 exemption, there has been an average of 255 trafficking offences per month.
- The second exemption monthly average trafficking offence (255 trafficking offences per month) is statistically greater ($p < 0.05$) than the average in the year before decriminalization (208 trafficking seizures per month).

⁵¹ "Original exemption" refers to BC's s.56 exemption in place from January 31, 2023 to May 6, 2024. "Second exemption" refers to BC's s.56 exemption that came into effect on May 7, 2024.

⁵² An offence represents a formal police interaction or investigation based on a particular type of suspected crime. An offence may or may not involve an arrest. It is not a charge nor a conviction.

4. Additional Metrics

Drug Impaired Driving

Decriminalization did not appear to increase drug impaired driving. There were no significant differences in the proportion of injured drivers testing positive for opioids and/or stimulants post-decriminalization in BC.

Drug impaired driving is a public health and safety issue that is important to monitor after the implementation of decriminalization in BC. Dr. Brubacher and his team at the University of British Columbia have been monitoring the prevalence of various substances in injured drivers across Canada and have conducted an analysis looking at the prevalence of opioids and stimulants in injured drivers in BC, Alberta, Saskatchewan, and Ontario before and after the implementation of decriminalization in BC.

Figure 18. Quarterly prevalence of drivers testing positive for opioids and stimulants in BC compared with Alberta, Saskatchewan, and Ontario (2018 – June 2024) ^{53,54}

⁵³ BC sites: Royal Columbian (New Westminister), Victoria, Vancouver. Sites in other provinces: Calgary, Edmonton, Saskatoon, Toronto, Ottawa

⁵⁴ There was no data collected between April and June 2020. Data for 2024 is only up to June 2024. As such, the analysis represents findings during the original exemption period.

- Decriminalization did not appear to increase drug-impaired driving.
- There was a small increase in injured drivers testing positive for opioids (6.4% to 7.5%) and/ or stimulants (9.3% to 11.8%) in BC between the year prior to decriminalization and the year after implementation.
- However, there were no significant differences between the changes in prevalence of injured testing positive for opioids and/or stimulants drivers in the post-decriminalization period in BC compared to other provinces after adjustment for relevant factors.⁵⁴ For study methodology please see [Brubacher et al., 2025](#).
- These results are consistent with Statistics Canada policing statistics that report that all impaired driving violations have decreased in BC by 4% from 2022 to 2023 and 14% from 2023 to 2024.

⁵⁵ *Adjusted for: age, sex, residential postal code, injury severity, detection of opioids stimulants, depressants, and alcohol, province of ED visit (BC vs. Other), season, day of week, time of day, crash type, linear time trend, and COVID-19 state of emergency (Mar 2020 to June 2021). Time trend and COVID-19 effects were allowed to vary by province.*

5. Next Steps

HLTH will continue to monitor the implementation and early outcomes of decriminalization, as required in Health Canada's Letter of Requirements, through the approach outlined in this report. Reporting will continue until the entire decriminalization period is covered. BC is committed to continuing to work with Health Canada to understand the impacts of decriminalization to improve ongoing BC policy and programs and inform the future of drug policy in Canada.

Appendix A: Synthesis of Key Evidence on Police Drug Seizure Harms

Police seizures are associated with increased overdose risk.^{vi,vii,viii,ix}

- A 2024 literature review paper found that the vast majority of research found an association between police seizure and fatal overdose.^{ix}
- In the United States, 2023 and 2024 studies found an increase in both fatal and non-fatal overdose events in the immediate geographic area of a police seizure of opioids or stimulants.^{viii,xiv}
- In Vancouver, researchers found that PWUD who experienced a police seizure were more likely to report a non-fatal overdose.ⁱⁱ
- With the prevalence of strong synthetic opioids in the illegal drug supply, turning to unfamiliar sources or suppliers to replace the seized drugs increases the risk of overdose.
- Stimulant or psychedelic users who are opioid naïve might obtain replacement drugs that are contaminated with opioids like fentanyl, increasing their overdose risk.
- Opioids users' tolerance could be reduced by the unexpected disruption from police seizures. Therefore, their overdose risk is elevated when they consume their normal amount of drugs.

Police seizures increase harms experienced by PWUD by putting them in unsafe situations to replace their supply (e.g., drug debts, property theft, or sex work).^{i,ii,vi}

- Withdrawal symptoms including vomiting, depression, tremors, hallucinations, and seizures are debilitating and can be life-threatening.^{xiii} Therefore, people with physical dependencies often must quickly replace the drugs that were seized.
- People struggling with addictions and poverty are likely to turn to risky behaviours to obtain replacement drugs. In a Vancouver-based study, 12% of participants engaged in illegal or dangerous activities such as theft, selling drugs, and sex work following police interaction.ⁱ
- Police drug seizures created additional need for PWUD to interact with the illicit drug market where violence and predatory behaviour is common.ⁱⁱ

Fear of drug seizure prevents people from accessing life-saving services, from calling police in unsafe situations, and from calling emergency services during overdoses.^{ii,x}

- In Vancouver, research found that drug seizure was associated with having administered naloxone to reverse an overdose.ⁱⁱ
- PWUD in BC perceived drug seizure as commonly occurring at overdoses, preventing some participants from calling 9-1-1 during an overdose event.^x
- 12% of respondents to the 2022 Harm Reduction Client Survey reported fear of their drugs being taken away as a barrier to seeking healthcare and treatment services.^{xiv}

Appendix B: Additional Tables and Figures

Proactive Outreach – Full Reporting by Health Authority

FRASER HEALTH AUTHORITY			
	Aug 2025	Sept 2025	Oct 2025

Second s.56 exemption Period												

Table 3. Offences, where the most serious offence is possession, by all police in BC – non-s.56 exemption eligible substances only (May 2024 – October 2025)^{60,61,62}

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
2024	-	-	-	-	136	130	152	119	125	109	88	75
2025	114	117	127	128	132	140	165	127	134	136	-	-
Second s.56 exemption Period												

⁵⁸ Offences listed as predominantly involving s.56 exemption eligible substances (via its UCR code) are counted in this table. Counts in this table could include a small number of files that have both s.56 exemption eligible and non-exempted substances. Refer to the [methodology](#) section for more details.

⁵⁹ Historic data (from before May 2024) is not available for this indicator.

⁶⁰ An offence represents a formal police interaction and investigation based on a particular type of suspected crime. An offence is not a charge nor a conviction.

⁶¹ Offences listed as involving non s.56 exemption eligible substances (via its UCR code) are counted in this table. Counts in this table do not include any files that involve a s.56 exemption eligible substance. Refer to the [methodology](#) section for more details.

⁶² Historic data (from before May 2024) is not available for this indicator.

Table 4. Offences, where the most serious offence is possession, by all police in BC – Top 10 Location Types^{63,64}

Baseline (Feb 2019 - Jan 2023)		
Location	Count	%
Streets, Roads, Highways	13769	40%
Parking Lots	5020	15%
Other Commercial/Corporate Places	3299	10%
Single Home/Townhouse/Duplex (and Connected Property)	2585	8%
Open Areas/Parks/Bodies of Water	2201	6%
Other Non-Commercial/Corporate Places	1389	4%
Residential Dwelling Unit (Apartment/Condo/Rooming House/Dorm)	1145	3%
Bar, Restaurant	663	2%
Homeless Shelter/Mission	589	2%
Commercial Dwelling Unit (Hotel/Motel/B&B Room)	515	1%
Other	3289	10%
TOTAL	34464	100%

⁶³ An offence represents a formal police interaction and investigation based on a particular type of suspected crime. An offence is not a charge nor a conviction.

⁶⁴ Location type data were extracted later than offence files. As such, there are some expected discrepancies between the number of possession offence files and number of location types. Data analysts from VPD and RCMP note that this is expected given the ‘live’ nature of the data environment from which these data are extracted.

Original Exemption Period (Feb 2023 - Apr 2024)		
Location	Count	%
Streets, Roads, Highways	1196	45%
Parking Lots	269	10%
Other Commercial/Corporate Places	235	9%
Single Home/Townhouse/Duplex (And Connected Property)	208	8%

Simple Possession Offences, Seizures, and Offences Cleared by Charge Over Time

Table 20. Number of Offences, Seizure incidents involving exempted drugs (regardless of amount), and Offences Cleared by Charge, where possession is the most serious offence, by police in BC (2019 – 2024)

	Offences	Seizure Incidents (Regardless of Amount)	Offences Cleared by Charge ^{73,74,75}
2019 (Full Year)	10,432	4,473	1,932
2020 (Full Year)	9,931	5,139	1,845
2021 (Full Year)	8,216	4,099	1,044
2022 (Full Year)	6,161	3,089	710
2023 (Full Year)	2,367	883	325
2024⁷⁶ (Full Year)	3,775	1,479	393

⁷³ Data from Statistics Canada: [Table 35-10-0177-01 Incident-based crime statistics, by detailed violations, Canada, provinces, territories, Census Metropolitan Areas and Canadian Forces Military Police](#). Accessed 2025-07-23.

⁷⁴ The indicator used in this table are the number of incidents “cleared by charge” for the following offences: heroin, possession [4110]; opioid (other than heroin), possession [4170]; cocaine, possession [4120]; Methamphetamines (crystal meth), possession [4150]; Methylendioxyamphetamine (ecstasy), possession [4160]; Other Controlled Drugs and Substances Act, possession [4130]. Incidents could involve more than one person. This indicator includes counts from Canadian Forces Military Police, a jurisdiction that is excluded from this report and not included in counts of offences or seizure incidents.

⁷⁵ Offences cleared by charge are [defined as offences where at least one accused has been identified and either a charge has been laid, or recommended to be laid, against the accused in connection with the offence](#). The charge may or may not align with the most serious offence recorded for an incident. Accessed 2025-04-23.

⁷⁶ The original s.56 exemption was effective until May 6, 2024. On May 7, 2024, the second s.56 exemption was implemented and replaced the original exemption.

BC Population (2019 – 2025)

Regional analyses completed in this report are based on health authority boundaries. Disaggregation by health authority regions, which was not previously available, enables improved alignment with health service utilization statistics.

Populations for each health authority region are derived from BCStats.⁷⁷ Numbers reflect BC’s total population and are used in calculating regional crime rates.

Table 21. BC Adult (18+) Population by Health Authority Regions (2019 - 2025)

	Fraser	Interior	Island	Northern	Vancouver Coastal
2019	1,542,947	680,764	716,179	230,962	1,059,555
2020	1,567,032	691,405	726,421	230,828	1,072,110
2021	1,591,512	703,023	736,837	230,620	1,074,526
2022	1,647,622	718,497	753,909	232,633	1,097,805
2023	1,728,012	733,611	768,380	235,634	1,139,312
2024	1,802,786	755,466	788,672	241,186	1,168,613
2025	1,830,436	760,535	791,762	241,114	1,172,220

BC Corrections Drug Related Offence Clients

Table 23. Average daily count (ADC) of **community corrections clients** whose most serious offence (MSO) was a charge and/or conviction for a drug related offence. (2019 - 2024)⁷⁸

	2019	2020	2021	2022	2023	2024
ADC of individuals with drug related MSO	1,220.6 (6%)	1,013.2 (5%)	879.5 (5%)	804.9 (5%)	695.8 (4%)	574.8 (3%)
Drug Trafficking	510.1 (2%)	433.5 (2%)	377.4 (2%)	327.1 (2%)	252.6 (1%)	199.8 (1%)
Drug Possession	157.8 (1%)	100.6 (1%)	64.6 (0%)	48.7 (0%)	32.1 (0%)	13.9 (0%)
Possession for the Purpose of Trafficking	552.7 (3%)	479.1 (2%)	437.4 (2%)	429.1 (3%)	411.1 (2%)	361.1 (2%)
Overall ADC- Community Corrections	20,835.3	19,575.2	17,670.4	17,124.4	17,051.6	17,102.3

Table 24. Average daily count (ADC) of individuals in **provincial custody** whose most serious offence (MSO) was a charge and/or conviction for a drug related offence. (2019 - 2024)⁷⁹

	2019	2020	2021	2022	2023	2024
ADC of individuals with drug related MSO	135.6 (6%)	73.1 (4%)	76.7 (5%)	64.1 (4%)	57.7 (3%)	46.1 (2%)
Drug Trafficking	68.4 (3%)	43.0 (3%)	40.0 (3%)	29.5 (2%)	22.2 (1%)	16.8 (1%)
Drug Possession	0.2 (0%)	0.0 (0%)	0.2 (0%)	0.0 (0%)	0.0 (0%)	0.0 (0%)
Possession for the Purpose of Trafficking	67.1 (3%)	30.1 (2%)	36.6 (2%)	34.6 (2%)	35.5 (2%)	29.3 (2%)
Overall ADC- Custody	2,286.5	1,656.0	1,525.9	1,659.6	1,828.9	1,861.4

⁷⁸ Data extracted from Cognos BI on July 29, 2025. Data represents individuals whose most serious offence for which they were charged and/or convicted was drug related. Therefore, individuals with both drug related charges and charges more serious in nature are not included. Due to rounding, percentages may not total as expected.

⁷⁹ Same as above.

Appendix C: Additional Contextual Indicators

Information related to the contextual indicators will be provided as appendix when they become available and appropriate for reporting.
