WEEKLY INCIDENT REPORT 02-08 MAR 2015

EVIDENCE SEARCH

On 8 Mar 2015, RCMP requested Campbell River SAR to assist the RCMP Dive team with an evidence search on the Gold River.

DANGEROUS GOODS

On 4 Mar 2015, several shipping containers located at the Centerm container terminal at Port Metro Vancouver, caught fire resulting in a significant release of toxic smoke and subsequent discharge of pollution due to run-off from contaminated water used for fire suppression into Burrard Inlet. The container that initially ignited contained the chemical Trucholoroisocyanuric Acid, which can be explosive and emit corrosive and toxic gas when on fire and reacts adversely when it comes in contact with water. The Port of Metro Vancouver evacuated their property while the police cordoned off surrounding areas and all vehicular and rail traffic into the Port was shut down. Residents in the area were advised to shelter in place by remaining inside with windows and doors closed. The Ministry of Environment Response Officer (MOE RO) raised the incident to Code 2 (urgent status) and attended the site as part of the Unified Command (UC) established with Vancouver Fire Department at the Port Incident Command Post (ICP). The Medical Health Officer and Health Protection Manager from the Vancouver Coastal Health Authority also attended the ICP. Hazardous waste professionals were contracted to develop a response plan to deal with the impacted container and to implement continuous air and water monitoring. On the morning of 6 Mar, the incident was downgraded to Code 1 (non-urgent status) by the MOE RO.

MISCELLANEOUS

On 4 Mar 2015, the cities of Vancouver and Burnaby were provided a task # for activation of their Local Emergency Operations Centres (EOCs), to support response to the chemical fire at the Port of Metro Vancouver, and to coordinate further evacuations as required. The SWE PREOC was activated by EMBC in support of local response efforts.
