- The Juan de Fuca Strait from Jordan River to Greater Victoria including the Gulf Islands
- The Strait of Georgia including the Gulf Islands, Greater Vancouver and Johnstone Strait

- All tsunami notification zones includes all islands and inlets within the location descriptive.

- Tsunamis are rare but serious events. Areas of coastal B.C. may be threatened in the event of any tsunami. They may be generated by a distant earthquake, volcanic eruption, or landslides. Provinces and territories are divided into as many high, medium, and low tsunami threat areas. These zones are included on the map of this document. December 2015, the Province of British Columbia, in consultation with the Province of Yukon and the Government of the N.W.T., divided the coastline of B.C. into five (5) zones for notification purposes. These zones are reflected on this map and are shown in different colours and the letters A, B, C, D and E.
